QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 225.] **Marriages**—*October, November, December*, 1904.
Births and **Deaths**—*January, February, March*, 1905. [Price 9*d.*

General Register Office, Somerset House,
26th April, 1905.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1905 is estimated at 43,219,788 persons; that of England and Wales at 34,152,977, that of Scotland at 4,676,603, and that of Ireland at 4,390,208.

In the United Kingdom 295,832 *births* and 191,074 *deaths* were registered in the three months ended 31st March 1905. The natural increase of population was, therefore, 104,758. The number of *persons married* in the quarter ended 31st December 1904 was 166,602.

The birth-rate in the United Kingdom in the *first* quarter of 1905 was 27·8, and the death-rate 17·9, per 1000 of the estimated population. The marriage-rate in the *fourth* quarter of 1904 was 15·4 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

According to the returns issued by the Board of Trade, it appears that 93,244 emigrants embarked, last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1,945 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 50,221, of whom 34,994 were English, 6,387 Scottish, and 8,840 Irish, whilst 43,023 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 1,024; Scotland, 1,366; and Ireland, 2,014. Compared with the averages in the three preceding first quarters, the proportion of English emigrants showed an increase of 14·7 per cent., that of Scottish emigrants an increase of 25·2 per cent., and that of Irish emigrants an increase of 120·4 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,041 registration sub-districts of England and Wales during the three months ended 31st March 1905; and the MARRIAGES in 15,538 churches or chapels, in 14,094 registered places of worship unconnected with the Established Church, and in 636 Superintendent Registrars' Offices, during the three months ended 31st December 1904.

2875 Wt 90 5/05 D & S 3 20966

Marriages.

During the *fourth* quarter of 1904 the marriages of 139,930 persons were registered, being equal to an annual rate of 16·4 persons married per 1000 of the estimated population, against an average rate of 17·6 per 1000 in the fourth quarters of the ten years 1894–1903.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 11·6 in Herefordshire, 12·4 in Shropshire, 13·6 in Denbighshire, and 13·7 in Hertfordshire; the highest rates were 18·0 in Norfolk, 18·2 in Wiltshire, 18·3 in Cambridgeshire and in Warwickshire, 18·8 in Suffolk, 19·1 in Monmouthshire, and 19·4 in Carmarthenshire.

Births.

The births registered in the *first* quarter of 1905 numbered 238,100, and were in the proportion of 28·3 annually per 1000 of the population; this is the lowest birth-rate recorded in any first quarter since civil registration was established. The mean rate in the ten preceding first quarters was 29·5. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 22·3 in Sussex and in Cornwall, 22·4 in Carnarvonshire, 22·6 in Bedfordshire, 22·7 in Oxfordshire, and 22·8 in Herefordshire; the highest rates were 30·0 in Warwickshire, 30·2 in Middlesex, 30·7 in Nottinghamshire, 31·9 in Northumberland, 33·1 in Staffordshire, 34·6 in Durham, and 36·5 in Monmouthshire and in Glamorganshire.

In 76 great towns the birth-rate averaged 29·4 per 1000, ranging from 16·7 in Bournemouth, 17·9 in Hornsey, 19·5 in Halifax, 19·9 in Hastings, 21·8 in Bradford, and 21·9 in Northampton, to 36·8 in Middlesbrough, 37·1 in Warrington, 37·3 in Wigan, 38·9 in St. Helens, 39·4 in Rhondda, and 41·9 in Merthyr Tydfil. In 141 smaller towns the mean birth-rate was 28·1 per 1000, whilst in the remainder of England and Wales, excluding these 217 towns, it was 27·0.

Natural Increase of Population.

The natural increase of population in England and Wales during the quarter by excess of births over deaths was 89,740, against 80,615, 96,758, and 86,862 in the first quarters of 1902, 1903, and 1904 respectively.

Prices and Pauperism

The average price of wheat per quarter, which had been 27*s.* 1*d.*, 28*s.* 5*d.*, and 30*s.* 3*d.* respectively in the preceding three quarters, was 30*s.* 6*d.* last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, $4\frac{3}{8}d.$; of prime beef, $7\frac{1}{8}d.$; of inferior mutton, $5\frac{7}{8}d.$; of prime mutton, 9*d.* Compared with the average prices in the preceding three months, the mean price of inferior beef remained unchanged, while that of prime beef showed an increase of $\frac{3}{8}d.$ The mean price of inferior mutton showed an increase of $\frac{3}{8}d.$, while that of prime mutton remained unchanged. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 14*s.* 11*d.* per ton, against 17*s.* 10*d.* and 16*s.* 8*d.* per ton in the first quarters of 1903 and 1904 respectively. The mean price of Consols was 89*l.* 17*s.* 0*d.*, having been 88*l.* 3*s.* 8*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had remained at 3*l.* since 21st April, 1904, was reduced on 9th March, 1905, to 2*l.* 10*s.* The mean rate during the quarter was 2*l.* 17*s.* 5*d.*

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 819,154 of whom 256,537 received in-door, and 562,617 out-door, relief. The proportion of the population in receipt of poor-law relief was 24·0 per 1000, against 22·1 and 22·8 per 1000 respectively in the first quarters of 1903 and 1904.

Meteorology.

A detailed report on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, prepared under the direction of the Meteorological Council, will be found on pp. 72–89.

The year opened with a touch of sharp frost, the thermometer on the night of the 1st January falling at least 10° below the freezing point in many parts of the country, and more than 15° below it in a few scattered places. On the 3rd, however, a Westerly breeze sprang up, and from this time onward to very nearly the middle of the month the weather was upon the whole mild and rather changeable, the only important exception occurring between the 5th and 7th, when the wind veered to N.W. and the air became perceptibly colder. On the 6th a strong gale from the N.W. was experienced, with a very high tide, a combination leading to serious floods at low lying places on the East coast of England. Towards the middle of the month the wind, after falling light (with another sharp frost), drew into the S.E. and blew a gale in most districts, the air at the time being excessively dry, especially over the Northern parts of the country. A sudden thaw on the 16th was followed a few days later by another sharp frost, the temperatures recorded on the 19th or 20th being in many places the lowest for the whole quarter. Towards the close of the month the weather became fair and dry, with a temperature differing but little from the normal, the chief meteorological feature at the time being the unusually high barometer readings observed in the South between the 27th and 29th. In the South-west of England, where the mercury rose above 31·0 ins., the readings were the highest on record for that particular locality.

Throughout the earlier half of February a long spell of Westerly and South-westerly breezes was accompanied by mild and fairly dry weather, a sharp frost being, however, experienced in most districts between the 8th and 11th. In the latter part of the month the conditions were far less settled, the wind being at first from the Northward with occasional falls of snow, but afterwards shifting round to South and blowing with the strength of a gale on the 26th over nearly the whole kingdom, with thunder and lightning in several isolated parts of the country.

The early part of March was fair, quiet and cold, with a sharp frost in many places on the nights of the 2nd and 3rd. After the 6th, however, a long spell of stormy weather was experienced, the wind being in the West or South-west, and strong to a gale in force, with mild weather, heavy falls of rain, and frequent thunder and lightning, either singly or in combination. These conditions lasted until after the middle of the month, when a temporary improvement occurred in most districts. Towards the close of the quarter, however, the weather became very changeable, the wind being rather variable in direction and of little strength, with a temperature usually above the average.

The *mean temperature* of the quarter was above the average, the excess ranging from 1° in the Channel Islands to 2° in London and in England North-east. The highest shade readings were observed between March 21st and 24th (chiefly on the 21st or 22nd), when the thermometer rose to 60°, or a trifle above it, in all districts, to 63° in London (at Brixton) and to nearly 64° in England North-west (at Carlisle). The lowest readings occurred in the Southern and Eastern districts on January 2nd, but in other parts of the country between the 19th and 22nd. Sharp frost was experienced on each occasion, the lowest temperatures reported being 11° at Llangammarch Wells (in Central Wales) and 15° in England Central and England South. In the Channel Islands the lowest reading observed during the quarter was 25°, on January 2nd.

The *rainfall* measured in London during the quarter amounted to 5·3 inches, and was 0·1 inch in excess of the average. Over the country generally there was a deficit—small in the Channel Islands, but rather large

in most other districts, and very large in England North-east, where the aggregate amount, 2·9 inches, was only 55 per cent. of the average. In January and February there were very few heavy falls, the total for the two months showing a large deficit in all parts of the country. In March heavy falls were frequent, the chief cases occurring in the South-western portions of the country on the 8th and 10th. On the former occasion 1·1 inch was measured at Falmouth and 1·3 inch at Arlington (North Devon); while on the latter occasion 1·0 inch was recorded at Southampton and 1·3 inch at Cardiff and Llangammarch Wells.

The duration of *bright sunshine* in London amounted to 220 hours, and was no fewer than 63 hours, or 40 per cent., in excess of the average. A considerable excess was reported also in England Central, England East, and England North-west, and a smaller excess in all other districts excepting the Channel Islands, where there was a slight deficiency.

Deaths.

The deaths registered in England and Wales last quarter numbered 148,360, and were in the proportion of 17·6 annually per 1000 persons living, the average rate in the ten preceding first quarters having been 19·2. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 14·2 in Middlesex, 14·8 in Surrey, 15·1 in Essex, 15·3 in Kent and in Leicestershire, and 15·4 in Bedfordshire and in Worcestershire, to 20·4 in Cornwall and in Carmarthenshire, 20·5 in Glamorganshire, 20·7 in Denbighshire, 21·0 in the North Riding of Yorkshire, and 22·8 in Monmouthshire.

The 148,360 registered deaths included 75,055 of males and 73,305 of females, the death-rate among males being 18·4, and that among females 16·8, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding first quarters the death-rate of males showed a decrease of 1·8, and that of females a decrease of 1·5, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 110 is to 100, the proportion in the first quarters of the ten preceding years having been the same.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1905 is estimated at more than fifteen and a half millions, the death-rate was 17·2 per 1000 living, or 0·4 below the death-rate in the whole country. The rates in the several towns ranged from 9·2 in Hornsey, 10·7 in Walthamstow, 11·3 in Kings Norton, 11·6 in Handsworth (Staffs.), 11·7 in Leyton, 12·3 in East Ham, and 12·4 in Smethwick, to 22·4 in Nottingham, 24·1 in Hanley, 24·8 in Middlesbrough, 26·1 in Stockton on Tees, and 28·0 in Merthyr Tydfil.

In 141 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at about four and three quarter millions in the middle of 1905, the death-rate was 17·0 per 1000 living, or 0·2 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than thirteen and three-quarter millions of persons, of whom nearly six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 18·3.

Mortality at Different Ages.

Of the 148,360 deaths registered last quarter, 31,337 were those of infants under one year of age, 64,918 those of persons aged between one year and sixty years, and 52,105 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was 132 per 1000, the average in the ten preceding first quarters having been 141. Among registration counties with populations exceeding 100,000 persons, the lowest proportions per 1000 births were 95 in Buckinghamshire, 97 in Surrey, 102 in Middlesex and in Bedfordshire, and 106 in Sussex and in Essex. The highest proportions were 173 in Cumberland and in Monmouthshire, 181 in Glamorganshire, 185 in Carnarvonshire, and 186 in Carmarthenshire.

In the 76 great towns infantile mortality averaged 127 per 1000 births, being 5 per 1000 below the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 56 in Handsworth (Staffs), 64 in Hornsey, 71 in Wallasey, 76 in Leyton, 80 in Walthamstow, and 85 in Birkenhead; the highest were 185 in Hanley, 186 in Middlesbrough, 197 in Norwich, 218 in Stockton on Tees, 219 in Merthyr Tydfil, and 230 in Rhondda. Among the 141 smaller towns infantile mortality averaged 137 per 1000 births, ranging from 58 in Winchester, 61 in Finchley, 66 in Ramsgate, 69 in Gravesend, 71 in Scarborough, 72 in Southend on Sea, and 74 in Ilford, to 229 in Longton and in Brighouse, 237 in Burslem and in Stalybridge, 243 in Dewsbury, and 254 in Hyde. Excluding these 217 towns, infantile mortality in the remainder of England and Wales was in the proportion of 135 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·6 per 1000 of the estimated population at this group of ages, being 1·0 below the mean rate in the ten preceding first quarters. In the 76 great towns the mean mortality at this age-group was 9·0 per 1000, ranging from 4·4 in Hornsey, 5·2 in Handsworth (Staffs), 5·4 in Walthamstow and in Kings Norton, 5·5 in Smethwick, and 5·7 in Leyton, to 12·0 in Wigan, 12·2 in Nottingham, 12·5 in Hanley, 14·7 in Merthyr Tydfil, 14·8 in Middlesbrough, and 15·2 in Stockton on Tees. In the 141 smaller towns the mortality at this age-group averaged 8·3 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 83·6 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding first quarters having been 86·6. In the 76 great towns the mean mortality at this age-group was 84·9 per 1000, the lowest rates being 63·6 in Kings Norton, 65·1 in Hornsey, 69·4 in Leyton, 70·3 in Southampton, 70·5 in East Ham, and 70·8 in Reading and in Leicester; and the highest, 101·7 in Newport (Mon.), 105·2 in Blackburn, 111·9 in Rochdale, 113·9 in Swansea, and 114·5 in Hanley. In the 141 smaller towns the rate averaged 83·0 per 1000.

Compared with the mean rates in the ten preceding first quarters, the mortality of infants under one year of age showed a decrease of 6·4 per cent., that of persons between one year and sixty years of age a decrease of 10·4 per cent., and that of persons aged sixty years and upwards a decrease of 3·5 per cent.

Mortality from certain Epidemic Diseases.

The 148,360 deaths from all causes include—

3,416	that were attributed to		measles,
2,779	„	„	whooping-cough,
1,668	„	„	diphtheria,
1,024	„	„	scarlet fever,
981	„	„	diarrhœa,
783	„	„	"fever,"
73	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 10,724 deaths were referred last quarter, being in the proportion of 1·28 per 1000 of the estimated population, or 0·22 per 1000 less than the average proportion in the corresponding quarters of the previous ten years. Measles was the only one of the diseases in the foregoing list that showed, last quarter, a mortality above the average.

Measles was returned as the cause of death in 3,416 instances, corresponding to an annual rate of 0·41 per 1000 of the population, which is slightly above the average rate in the first quarters of the preceding ten years. Four of the counties of England and Wales were free from measles fatality throughout the quarter recently ended; the counties with populations of more than 100,000 persons showing the highest fatality from this disease were Glamorganshire, where the annual rate was 0·76, the North Riding of Yorkshire 0·77, Berkshire 0·86, Monmouthshire 0·95, Cumberland 1·21, Hampshire 1·57, and Nottinghamshire 1·68, per 1000 of the respective populations. In the 76 great towns measles caused an average mortality of 0·48 per 1000. In 10 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 2·12 in Reading, 3·01 in Nottingham, 3·25 in Southampton, 3·26 in Merthyr Tydfil, 3·32 in Portsmouth, and 3·98 in Stockton on Tees. In the 141 smaller towns, measles was fatal on the average to 0·40 annually per 1000 persons living, and among these towns showed exceptional fatality in Stafford, Barking, Tipton, Gosport & Alverstoke, Wednesbury and Ince in Makerfield. In the remainder of England and Wales the average measles death-rate was 0·33 per 1000 of the population. Among registration districts and sub-districts outside the 217 chief towns, measles was especially fatal in Lymington, Witham, Clare, Brixham, Newcastle under Lyme, Norton (Staff.), Over, Thornaby, Maryport, Egremont, and in the part of Aberystruth forming the Urban District of Nantyglo & Blaina.

Whooping-cough accounted, last quarter, for 2,779 deaths, and for a death-rate equal to 0·33 per 1000 annually, which is lower by 0·08 per 1000 than the average rate in the ten previous corresponding quarters. In the county of Montgomery no deaths were registered from this disease, and in five other counties with populations exceeding 100,000 persons, the death-rate did not exceed 0·15 per 1000, whilst it rose to 0·49 in Lincoln, to 0·50 in Middlesex and in the East Riding of Yorkshire, to 0·55 in Nottinghamshire and in Carmarthenshire, and to 0·95 in Cornwall. In the 76 great towns, whooping-cough caused an average death-rate of 0·35 per 1000 living. Nine of these towns were free from mortality from this disease throughout the quarter, but the death-rate therefrom was equal to 0·90 per 1000 in Willesden and in Tynemouth, 0·95 in South Shields, 1·26 in Hastings, 1·30 in Grimsby, 1·56 in Preston, and 2·36 in Hanley. In the 141 smaller towns, the average death-rate from whooping-cough was 0·37 per 1000; the disease being especially fatal in Mansfield, Salisbury, Macclesfield, Burslem, Watford and Richmond. In the remainder of England and Wales, whooping-cough caused an average mortality equal to 0·29 per 1000 annually. Among registration districts and sub-districts outside the 217 chief towns, whooping-cough was exceptionally fatal in Great Torrington, Camelford, St. Keverne, Leigh (Worc.), and Warsop.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,668 deaths, a number equal to an annual rate of 0·20 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·07 per 1000. Two of the counties were entirely free from fatal diphtheria throughout the quarter. Among counties with populations exceeding 100,000 persons the highest death-rates from this disease were in Buckinghamshire 0·30, Durham 0·31, Glamorganshire 0·33, Lincolnshire 0·34, North Riding of Yorkshire 0·37, and Carmarthenshire 0·38. The average death-rate from diphtheria in the 76 great towns was equal to 0·21 per 1000 of their aggregate population. In four of these towns no deaths from this disease occurred in the course of the quarter. The great towns in which diphtheria showed the highest fatality were the following:—East Ham where the death-rate was equal to 0·52, Grimsby 0·53, Stockton on Tees 0·54, Bootle 0·58, and Rochdale and Middlesbrough 0·65, per 1000 of the several populations. In the 141 smaller towns the mortality from this disease averaged 0·19 per 1000, the rate being highest in Felling, Burslem, Aberdare, Cambridge, Hyde, and Heywood. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·18 per 1000 living. Among registration districts and sub-districts outside the 217 chief towns, the mortality

from this disease was excessive in Littlehampton, Somerton, Aslackby, Middlewich, Hemsworth, and Llannon.

Scarlet fever accounted last quarter for the deaths of 1024 persons, and for a death-rate of 0·12 per 1000 living, or 0·01 per 1000 less than the decennial average rate for the first quarter. Six of the counties of England and Wales were free from scarlet fever mortality. Among counties with populations exceeding 100,000 persons, the highest county rates were 0·19 per 1000 in Lancashire and in the West Riding of Yorkshire, 0·20 in Glamorganshire, 0·26 in Carmarthenshire, 0·33 in Northamptonshire, and 0·35 in Derbyshire. In the 76 great towns scarlet fever accounted for an average mortality equal to 0·13 per 1000 annually. No deaths from this disease were recorded in ten of these towns. The highest scarlet fever death-rates were 0·37 per 1000 in Hanley, 0·38 in Plymouth, 0·42 in Blackburn, 0·43 in Merthyr Tydfil, 0·46 in Stockton on Tees, and 0·52 in Northampton. In the 141 smaller towns scarlet fever was fatal in the average proportion of 0·14 per 1000 living, and among these showed exceptional fatality in Burslem, Glossop, Canterbury, Morley, Chesterfield, Darwen, and Aberdare. In the remainder of England and Wales this disease caused an average death-rate equal to 0·11 per 1000 living. Among registration districts and sub-districts outside the 217 chief towns, scarlet fever showed excessive fatality in Higham Ferrers, East Stonehouse, Eckington (Derby), Mirfield, Selby, and Pembrey.

Diarrhœa was the assigned cause of 981 deaths last quarter, equal to an annual mortality of 0·12 per 1000, which is lower by 0·04 per 1000 than the decennial average rate for the first quarter of the year. Among counties with populations exceeding 100,000 persons the highest rates from this disease last quarter were 0·16 in Warwickshire and in Lancashire, 0·17 in Norfolk, 0·19 in the North Riding of Yorkshire, 0·20 in Glamorganshire, and 0·24 in Staffordshire. No deaths from diarrhœa were returned from three of the counties. In the 76 great towns the average death-rate from diarrhœa was 0·13 per 1000; no deaths were returned in seven of these towns; the rate was highest in the following towns :—Salford 0·31, Wolverhampton 0·36, Burnley 0·39, West Bromwich 0·47, Merthyr Tydfil 0·49, and Middlesbrough 0·53. In the 141 smaller towns diarrhœa was fatal on the average to 0·12 per 1000 of the population, and caused the highest mortality in Cannock, Wolstanton United, Guildford, Glossop, Dudley, and Longton. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·10 per 1000.

"*Fever*" (including the three chief forms—*typhus*, *enteric fever*, and "*pyrexia*" of uncertain origin) was the registered cause of 783 deaths last quarter, equal to an annual death-rate of 0·09 per 1000 of the population, or 0·04 per 1000 less than the average rate in the first quarters of the previous ten years. No deaths from "fever" were returned from twelve of the counties; among counties with populations exceeding 100,000 persons, the highest county "fever" rates were 0·12 in Monmouthshire, 0·14 in Lancashire and in the North Riding of Yorkshire, 0·15 in the West Riding, and in Durham, and 0·96 in Lincolnshire. In the 76 great towns "fever" caused an average mortality equal to 0·08 per 1000 annually. In 17 of these great towns no deaths from "fever" occurred; the towns with the highest "fever" death-rates were South Shields 0·26, Bury 0·27, Bolton and Rhondda 0·29, West Bromwich 0·30, and Middlesbrough 0·33, per 1000 of the respective populations. In the 141 smaller towns "fever" caused an average mortality equal to 0·18 per 1000 annually, and was most fatal in Batley, Abertillery, Tunstall, Canterbury, and Lincoln, in which latter town the rate was equal to 8·33 per 1000 annually. In the remainder of England and Wales, the death-rate from "fever" averaged 0·08 per 1000. Among registration districts and sub-districts outside the 217 chief towns, "fever" was especially fatal in Tollesbury and Sedgefield.

Small-pox was fatal to 73 persons last quarter as compared with 95, 120, 134 and 155 in the four quarters immediately preceding. Of the deaths

from small-pox, 46 belonged to one or other of the 217 chief towns; of these 5 belonged to London, 4 to Burnley, 4 to Bradford, and 3 apiece to Oldham, Leeds, Dewsbury, Barnsley, Hull, and South Shields.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4,993 last quarter, and corresponded to an annual rate of 0·59 per 1000 of the population, against an average of 0·64 in the ten preceding first quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·24 in Berkshire, 0·32 in Bedfordshire, 0·36 in Wiltshire, 0·37 in Oxfordshire, 0·38 in Dorsetshire, and 0·39 in Hertfordshire and in Northamptonshire; the highest rates were 0·74 in Northumberland, 0·80 in the East Riding of Yorkshire, 0·82 in Shropshire, 0·83 in Glamorganshire, and 0·91 in Monmouthshire. In the 76 great towns the mean rate was 0·64 per 1000 living; among the several towns the rate was only 0·10 in Hornsey, 0·15 in Aston Manor, 0·18 in Bournemouth, 0·23 in East Ham, 0·29 in Kings Norton, 0·30 in Northampton; but it rose to 0·96 in Hull, 0·98 in Merthyr Tydfil, 1·00 in Great Yarmouth, 1·06 in Barrow in Furness, 1·15 in Stockton on Tees, and 1·30 in West Bromwich.

Certification of Causes of Death.

Of the 148,360 deaths registered in England and Wales last quarter, the causes of 136,179, or 91·8 per cent., were certified by registered medical practitioners, and the causes of 9,566, or 6·4 per cent., by coroners after inquest; whilst the causes of the remaining 2,615, or 1·8 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding first quarters having been 2·1 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Sussex, Middlesex, Wiltshire, Somersetshire, Gloucestershire, Cheshire, the East Riding of Yorkshire, and Glamorganshire, but it reached 3·4 in Durham, 3·5 in Warwickshire, 3·6 in Berkshire, 4·0 in Carnarvonshire, and 4·2 in Herefordshire. In the 76 great towns the mean proportion of uncertified deaths was 1·3 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, West Ham, Southampton, Great Yarmouth, Plymouth, Devonport, Derby, Oldham, York, and Newport (Mon.), the proportion per cent. rose to 4·5 in Barrow in Furness, 4·8 in Birmingham, 5·1 in Bootle, 5·8 in St. Helens, and 9·6 in Warrington.

Inquests.

Inquests were held in England and Wales concerning 9,566, or 6·4 per cent. of the total deaths, the mean proportion in the ten preceding first quarters having been 6·3 per cent. In the 76 great towns the proportion of inquest cases was 7·9 per cent., ranging from 2·5 in Aston Manor, 2·7 in Warrington, 3·5 in Rhondda, 3·6 in Middlesbrough, and 3·8 in Bournemouth, to 10·1 in London, 10·2 in Birkenhead, 10·4 in Hull, 10·8 in Leeds, 11·8 in Cardiff, 12·1 in Southampton, and 12·2 in Tottenham.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 25,148, or 17·0 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding first quarters having been 14·7 per cent. In the 76 great towns the deaths in public institutions averaged 23·2 per cent. of the total deaths, the lowest percentages in the several towns being 2·8 in Rhondda, 5·6 in Handsworth (Staffs), 6·8 in Merthyr Tydfil, and 8·3 in Hornsey; and the highest 25·4 in Brighton, 26·2 in Salford, 30·8 in Liverpool, and 36·5 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London that occurred in the London Fever Hospital, in the Metropolitan Asylums Board Hospitals, and in the Middlesex County Lunatic Asylum, within the County of London. The death-rate, thus computed, was equal to 16·8 annually per 1000 living (Table VI.). If, however, all the deaths of non-Londoners that occurred in hospitals or other public institutions in London be excluded, the death-rate will not exceed 16·2 per 1000. Table X. shows the death-rate in London after this further correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the Metropolitan Boroughs are also shown, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual death-rate per 1000 living last quarter was 17·8 in Edinburgh, 19·4 in Glasgow, 24·6 in Dublin, and 22·8 in Belfast, against 16·8 in London.

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with weekly returns of vital statistics by the authorities of twenty-nine of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XI.). Excluding the Indian Cities, the highest and lowest annual birth and death-rates during the first quarter of 1905 were as follows :—

BIRTH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Trieste	33·3	Paris	19·9
Bucharest	33·1	Brussels	20·5
Munich	32·6	Prague	22·8
Breslau	31·5	Toronto	23·3
Christiania	29·3	Stockholm	24·3
Copenhagen	28·6	Berlin	24·6
	London ... 28·5		

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Venice	35·7	Chicago	15·2
Trieste	33·0	Antwerp	15·8
Moscow	30·0	Amsterdam	16·1
St. Petersburg	29·3	Brussels	16·5
Bucharest	28·7	Hamburg	16·6
Prague	24·9	Rio de Janeiro	16·7
	London ... 16·8		

Small-pox caused 151 deaths in Rio de Janeiro, 34 in Chicago, 26 in Moscow, 23 in Paris, and 21 in St. Petersburg.

Measles was most fatal in proportion to population in Antwerp, St. Petersburg, Amsterdam, Moscow, and Vienna; *scarlet fever* in Moscow, Stockholm, St. Petersburg, and Buda Pesth; *diphtheria* in Toronto, Christiania, St. Petersburg, New York, Moscow, Stockholm, and Philadelphia; *whooping-cough* in Christiania, Amsterdam, Stockholm, and Venice; "*fever*" in St. Petersburg, Philadelphia, and Rio de Janeiro; and *diarrhœal diseases* in St. Petersburg, Moscow, Munich, Prague, and Venice.

INDIAN CITIES.—The death-rate was equal to 38·0 per 1000 in Calcutta, 39·7 in Madras, and 90·6 in Bombay. *Small-pox* caused 1,533 deaths in Bombay, 45 in Calcutta, and 27 in Madras; *measles* caused 229 deaths in Bombay. Under the heading "*fever*" 7,202 deaths were classed in Bombay, 2,493 in Calcutta, and 845 in Madras, including respectively, 6,450, 1,122, and 4 deaths from *plague*. The mortality from *diarrhœal diseases* was excessive in each of these Indian cities; *Asiatic cholera* caused 640 deaths in Calcutta.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the first quarter of the year 1905 (*see* pages xxv-xxx).

TABLE V.—**76 Great Towns.—Population; Births, Deaths,** and **Meteorology** in the 13 Weeks ended **1st April, 1905.**

NOTE.—The 76 Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

NOTE.—The 76 Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TABLE VII.—**One hundred and forty-one smaller Towns.—Population; Births** and **Deaths** in the QUARTER ended 31st March, 1905.

NOTE.—The 141 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 persons at the Census of 1901. They are arranged alphabetically under the Registration Counties in which they are situated. The Registrars alone must be considered responsible for the accuracy of the figures upon which these Returns are based.

TOWNS.	ESTIMATED POPULATION IN THE MIDDLE OF 1905.	BIRTHS.	DEATHS.	The DEATHS registered in the Quarter include													Deaths under 1 year to 1000 Births.	TOWNS.

In this Table 0·00 indicates that the deaths were too few to give a rate of 0·005 ; where *no death* occurred, – is inserted.
Note.—The rates for the County of London do not in all cases agree with those in Table vi., page xvii. ; for explanation, see page ix.
* Formerly described as "Simple Continued Fever."

The *Registration Districts*, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[a] See page 2, note [b].

[b] For London, the figures given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—Registration Districts.

[a] The *Registration Sub-districts* (2041 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

[b] See page 2, note [b].

[c] See page 6, note [b].

* 503 : 4, 5.—On 1st February, 1905, the boundary between these sub-districts was altered. See page 71. The births and deaths are shown as if the change had taken place at the beginning of the quarter.

[a] 502 : 5.—Of the 6 deaths from scarlet fever, 3 belonged to Ravensthorpe and 2 to Mirfield.

[b] 502 : 8.—Of the 5 deaths from small-pox, 4 belonged to areas outside the sub-district.

[c] 503 : 8.—Of the 7 deaths from whooping-cough, 5 belonged to Ardsley Urban District.

[d] 504 : 3.—Of the 13 deaths from measles, 10 occurred in Featherstone Urban District.

[e] 506 : 1.—Of the 7 deaths from measles, 6 belonged to Royston.

[f] 506 : 2.—Of the 7 deaths from small-pox, 3 belonged to the Borough of Barnsley and 2 to Wombwell, one to Ardsley and one to Darfield Urban Districts.

METEOROLOGY.

Remarks on the Weather over the United Kingdom during the Quarter ended March 31st, 1905.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 150 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JANUARY, 1905.

General Summary.—The weather experienced during January was of an exceedingly variable character, at times very unsettled, with rain, hail, sleet or snow in many localities, a thunderstorm accompanying a fall of hail in the south-east of Scotland on the 12th; at other times, and particularly towards the close, it was exceptionally fine and bright, the duration of sunshine being abnormally large for the mid-winter month. There were some severe frosts, local rather than general, and of brief duration, while high day temperatures were common to all districts. In the night of the 6th a deep disturbance appeared beyond the Shetlands, travelling quickly south-eastward, a more or less severe North-Westerly gale being felt in many parts of the country, and in the rear of the centre the barometer at Sumburgh Head rose 1·13 in. in 14 hours. Associated with this disturbance there was an unusually high tide, which flooded all the low-lying districts on the east coast of England, and caused much destruction. The middle of the month was marked by very strong South-Easterly winds and gales, with an intensely dry searching atmosphere, the relative humidity at 9 a.m. on the 15th being as low as 52 per cent. at Aspatria and Glasgow, and 54 per cent. at Southampton. On the 16th and 17th a very deep cyclonic system (barometer 27·99 ins. at Blacksod Point) moved up the western coasts, occasioning violent Southerly to Easterly gales. In the early hours of the 20th slight earthquake shocks were felt in some parts of Cornwall. An anticyclone which appeared off the west of Ireland on the morning of the 24th steadily increased in intensity, and by 11 a.m. on the 27th the barometer reached 31 ins. at Jersey. Until the evening of the 29th, readings of 31 ins. and upwards were recorded at stations from Jersey westward, and from Holyhead down to the north of Spain, the highest level attained being 31·097 ins. at Falmouth at 11 a.m. on the 28th. The records in the possession of the Meteorological Office give no previous instance of readings as high as 31 ins. in this particular region. Fogs were of rare occurrence and of an unimportant character. Over the southern and eastern districts the days with precipitation in any form were few in number. For the month as a whole pressure was decidedly above the normal everywhere; temperature was in excess except at some southern stations; the winds were mainly North-Westerly to South-Westerly and Southerly, and gales were rather numerous; rainfall was nearly everywhere deficient; and bright sunshine was in excess over Britain, and in defect over Ireland.

Pressure.—*Mean at 8 a.m.* ranged from 30·34 ins. at Jersey to 29·83 ins. in the Shetlands, the values in all cases being above the average, by as much as 0·32 in. at Jersey and 0·14 in. at Sumburgh Head. *Highest* readings were recorded in the south-western districts from the 27th to the 29th, several stations exceeding 31 ins. On the 1st readings between 30·7 ins. and 30·8 ins. were reported in the south and east of England. *Lowest* readings occurred in Ireland on the 16th and 17th, some stations below 28·5 ins., and Blacksod Point touched 27·99 ins. At Sumburgh Head 28·7 ins. was registered on the 6th. *Range* was very large everywhere, from 1·7 in. at the eastern stations to more than 2 ins. over Wales and Ireland, and 2·97 ins. at Blacksod Point.

Depressions.—With the exception of the deep one of the 16th–17th on our extreme western coasts, the principal disturbances of the month were confined to Scandinavia.

Anticyclones.—While the barometer was generally rather high over the country, the only anticyclonic centre which visited us was on the 26th, when the mercury rose above 30·8 ins over the western half of England. The system moved south-westward and developed greater intensity, the readings at all south-western stations and down to Spain passing above 31 ins. Other anticyclones had their centres between the Bay of Biscay and Russia, 31·1 ins. being recorded in the central parts of Russia on the 20th.

Winds.—At the southern and south-western stations there was a large proportion of Easterly and South-Easterly winds, but in the main North-Westerly to South-Westerly and Southerly currents prevailed. Gales were experienced at Deerness on 19 days, at Malin Head on 17 days, at Blacksod Point on 14 days, at Cockle Park and Durham on 13 days, and at Sumburgh Head on 12 days.

Temperature.—*Mean at sea level* ranged from slightly above 46° at Scilly and Valencia to below 38° at a number of the inland English stations. The general distribution did not differ much from the normal, but with the exception of a number of isolated stations in the southern half of England the mean values were above the average, to the extent of 3° at Armagh, Glencarron, Edenfel, Foynes, and Stornoway, and nearly 4° at Lairg. *Highest* readings were recorded on very varied dates, 58° at Colly Weston on the 6th, and at Reading on the 8th, and 57° at Southampton on the 7th. *Lowest* readings also occurred on varied dates, but mainly on the 2nd and round the 19th, 14° at Bawtry and Wokingham, 12° at Garforth, Hereford, and Littlestone-on-Sea, and 11° at Llangammarch Wells. *Range* was moderate in amount as a general rule, but it was as much as 41° at Hereford, Littlestone-on-Sea and Llangammarch Wells and 40° at Garforth and Wokingham, and only 18° at Falmouth and 16° at Scilly. *Vapour Pressure* ranged from 0·19 in. at Nottingham and Oxford to 0·26 in. at Blacksod Point and Valencia, and 0·27 in. at Roche's Point. *Relative Humidity* at 8 a.m. or 9 a.m. showed no great variation, from 82 per cent. at Pembroke to 90 per cent. at Clacton-on-Sea, Dungeness, Malin Head, Birr Castle and Roche's Point.

Rainfall.—There was a fairly large excess of rain in the north of Scotland, of as much as 2 ins. at Sumburgh Head and Lairg and 3·5 ins. at Glencarron, and there was a small excess at Laudale and Blacksod Point. Over the rest of the kingdom the amounts were all below the average, the deficiency ranging upwards to 2·8 ins. at Clifton, Falmouth and Roche's Point, and 3·3 ins. at Clathick. The largest aggregates for the month were 13·4 ins. at Glencarron, 8·6 ins. at Laudale and 5·8 ins. at Stornoway and Sumburgh Head, while the smallest were less than 0·5 in. in various parts of England, 0·24 in. at Seaham, 0·21 in. at Shields, and only 0·11 in. at Spurn Head. The heaviest falls in one day were 1 in. at Jersey on the 16th, 1·1 in. at Laudale on the 3rd, at Valencia on the 14th, and at Dungeness on the 16th, and 1·4 in. at Glencarron on the 10th. The days on which any precipitation was measured numbered 26 at Sumburgh Head and 25 at Stornoway, against less than 10 in many parts of England, only 4 at Spurn Head.

Bright Sunshine exceeded the average over Britain, by an hour or more per day at several stations in England. Over Ireland and in the Hebrides and Orkneys there was a deficiency, of as much as 37 hours at Valencia. The percentage of possible duration ranged from 40 at Bournemouth and 38 at Totland Bay to 7 at Stornoway and Valencia and 4 at Manchester (Whitworth Park).

FEBRUARY, 1905.

General Summary.—During the first eighteen days of the month our islands were between an anticyclonic system, having its central space most of the time to the south-westward or southward (the Bay region), and disturbances which kept at a considerable distance beyond our northern coasts on their way to the Arctic parts of Scandinavia. Winds from between South-West and North-West were consequently largely prevalent, and, at times, were strong to a gale in force, but the period was almost uniformly mild, with the temperature of the successive weeks from 2° to 5° above the average, while with the exception of the north of Scotland there was everywhere a very large deficiency of rain. The remainder of the month was of a more variable character, with more or less severe gales from Northerly, as well as from Southerly, directions, and very strong North-Easterly winds along the southern and eastern coasts. Much colder weather was experienced in all districts, temperature being as much in defect as it had previously been in excess. Rain, hail, sleet, or snow, fell more

frequently, and in somewhat larger quantities than before, but the amounts measured were still less than the normal in nearly all localities, the result being that for the eight weeks, January 1st to February 25th, all the eastern and southern portions of Britain had received only from one-third (England, N.E.) to one half (Channel Islands) the normal precipitation, the north of Scotland alone showing an excess. For the whole of February pressure and temperature were generally above the normal; the winds were mainly from between South-West and North-West, and gales were rather frequent; there was a marked deficiency of rain, and bright sunshine was as a rule abundant.

Pressure.—*Mean at 8 a.m.* ranged from 30·28 ins. at Jersey, 30·27 ins. at Scilly, and above 30·2 ins. at nearly all southern stations to below 29·9 ins. in the north of Scotland, and 29·75 ins. at Sumburgh Head. With the exception of a slight deficiency of 0·01 in. in the Shetlands, the values were all in excess of the average, the differences increasing from north to south, so that at Roche's Point the excess amounted to 0·33 in., and at Valencia to 0·34 in. The distribution of mean pressure shows the gradient to be twice as steep as the normal. *Highest* readings occurred about the 12th, 15th, and 21st and 22nd, when 30·6 ins. was exceeded in many places, Aberdeen touching 30·7 ins. on the 21st. *Lowest* values were reported on the 18th—28·65 ins. at Sumburgh Head,—and on the 26th–27th—Stornoway sinking to 28·48 ins., and Malin Head to 28·51 ins. *Range* was considerable in all districts, from 1·3 ins. at Jersey and Dungeness to 2 ins. or more in the north and north-west; 2·2 ins. at Stornoway and Malin Head.

Depressions.—The disturbances of the month were nearly all outside our islands, to the northward and north-eastward. One which appeared over Wales on the morning of the 7th, and dispersed over the south of England in the following night, had the barometer at its centre as high as 30·3 ins. to 30·4 ins. It brought rain to many localities, but no wind. The only other depression whose centre came inland was that which lingered about our north-western, northern, and eastern districts from the 25th until March 1st.

Anticyclones.—While the barometer maintained a high level during a greater part of the period, the central space of only one anticyclone visited the country, passing across the northern districts on the 21st for Scandinavia and Russia, with readings above 30·6 ins. Our extreme south-western districts were covered by a very small portion of the core of one from the 11th to the 14th. As was the case in January the high pressure centres were found mainly from the Bay of Biscay eastward across Central Europe to Russia.

Winds.—With the exception of a current from between North-East and South-East for a few days about the end of the third week, the winds were almost wholly in the Western half of the compass. Gale force was experienced at Deerness on 15 days, at Durham on 12 days, and at Malin Head and Blacksod Point on 11 days.

Temperature.—*Mean at sea level* ranged from above 46° at Scilly and above 44° at all south-western stations to below 40° over the north of Scotland and to slightly under 38° at Fort Augustus and Lairg. The general distribution resembled the normal, but the mean values were in nearly all cases above the average, the excess being nearly 3° at a few places in the south-east quarter of England. *Highest* readings occurred mainly about the 5th, and 14th to 18th, there being numerous instances of 55° and upwards, 59° being registered at Garforth on the 14th. *Lowest* values were recorded about the 8th, 12th and 20th to 25th; in Ireland, 21° at Birr Castle on the 24th; in England, 20° at Garforth and Rauceby on the 8th; and in Scotland, 15° at Lairg on the 23rd, and 12° at Braemar on the 22nd. *Range* was moderate, 39° at Garforth being the greatest, while Blacksod and Scilly had only 19°, Newquay 18°, and Aberystwyth and Guernsey 17°. *Vapour Pressure* ranged from 0·26 in. at Scilly to 0·19 in. at Nairn. *Relative Humidity* at 8 a.m. or 9 a.m. was as high as 92 per cent. at Dungeness and Birr Castle, and 91 per cent. at Clacton-on-Sea and Roche's Point, the lowest being 83 per cent. at Blacksod Point, and 81 per cent. at Valencia.

Rainfall.—In the North of Scotland, and locally in the North of Ireland, the rainfall was above the average by as much as 3·8 ins. at Glencarron and 3·1 ins. at Laudale, but over the rest of the kingdom there was a deficiency, of as much as 2·5 ins. at Falmouth and 2·7 ins. at Roche's Point. The aggregate totals for the month ranged from 10·7 ins. at Glencarron, 9·7 ins. at Laudale, and 6·1 ins. at Stornoway, to less than an inch at a large number of stations, and to only 0·4 at Reading, Oxford, and Shoeburyness. The days on which precipitation was measured numbered 25 at Sumburgh Head, Stornoway, and Glencarron, and 24 at Blacksod and Lairg, against 8, 9, or 10 in many parts of England. The falls were, as a rule, very small, there being only a few records of as much as 0·5 in. in a day, but Killarney had 1·3 in. on the 25th, Glencarron 1·4 in. on the 3rd, and Laudale 2·4 ins. on the 25th, the only stations with more than an inch.

Bright Sunshine was below the average in the Channel Islands and in most parts of Scotland. Elsewhere nearly all the records show an excess, Blackpool and Cronkbourne being more than an hour per day to the good. The percentage of possible duration ranged from 40 at Kingstown, 38 at Cronkbourne (Isle of Man), and 36 at Dublin (Phœnix Park) to 16 at Birmingham, 15 at Llangammarch Wells, and 11 at Manchester (Whitworth Park).

MARCH, 1905.

General Summary.—The month under review was of an exceedingly unstable character, being the roughest and most boisterous for some considerable time past. Nearly throughout the conditions were under the influence of disturbances from the Atlantic, the great majority of them skirting our western and northern coasts, so that a mild, damp South-Westerly type of weather prevailed most of the time. Several of the disturbances were deep, particularly the one which reached the Irish coast in the night of the 14th–15th, when the barometer at Valencia fell at an unusually rapid rate, 0·7 in. in 5 hours, and 0·84 in. in 7 hours, subsequently rising 0·32 in. in 2 hours. This depression produced a gale over practically the entire kingdom, and over the southern half and on the English Channel and Bay of Biscay it was very severe, a "whole gale" or "storm" being reported in many places, with high, turbulent seas running. Gales were experienced with most of the other disturbances, but they were neither so general nor so severe as that specially referred to. There was an abnormal check to the rise of the tide in the Thames during the South-Westerly gale of the 11th. Rain, hail or sleet fell almost daily, and in numerous instances the amounts were large, the result being that the marked dryness of the preceding two months was made up for in many localities. During the most stormy period of the month, between the 5th and 17th, thunderstorms were unusually frequent for the time of year, thunder or lightning alone being very common. Notwithstanding the unsettled and rainy conditions there was a great deal of fine bright weather in the intervals. On the night of the 2nd an auroral display was witnessed in the western and north-western districts. Earthquake shocks were felt in the neighbourhood of Barnet on the 15th. Taking the month as a whole pressure was decidedly below its usual level; temperature was well in excess; the winds were mainly from between South and West, frequently strong to a gale in force; rainfall was in excess except in the extreme east of England; and bright sunshine was above the normal except at various stations in Scotland and on the English Channel.

Pressure.—*Mean at* 8 *a.m.* ranged from 29·82 ins. at Jersey, and above 29·7 ins. at most southern stations in England to below 29·5 ins. in the extreme north and north-west, and to 29·43 ins. at Stornoway. The values were everywhere below the average, the smallest defect being 0·15 in. at Dungeness and Jersey, the largest 0·38 in. at Malin Head. The distribution of mean pressure was of a South-Westerly type, the normal being more Westerly, and the gradient much steeper than usual. *Highest* readings occurred between the 2nd and 4th, when 30·3 ins. was reached in nearly all parts of England, 30·38 ins. at Jersey. *Lowest* readings were recorded on the 11th, 28·44 ins. at Aberdeen and 28·45 ins. at Sumburgh Head, and on the 15th, 27·92 ins. at Malin Head, nearly every station passing below 29 ins. *Range* was large everywhere, from 1·2 in. at Clacton-on-Sea to upwards of 2 ins. at all Irish stations, 2·3 ins. at Malin Head.

Depressions.—Numerous low pressure systems visited our neighbourhood, a few unimportant ones appearing in the English Channel region, but the great majority skirting the western coasts going northwards, their centres, in nearly all cases, being out on the ocean. These western disturbances followed each other in rapid succession, and in several instances they were very deep, with barometer readings below 29 ins. at the centres, the deepest being that of the morning of the 15th in the north of Ireland.

Anticyclones.—The month opened with an anticyclone of moderate intensity moving in upon us from the north-westward. Its centre was over the western portion of England on the 3rd, but by the night of the 4th it had passed away from our shores. This was the only high pressure centre of the month over our islands, even the foreign ones being a considerable distance away as a rule.

Winds.—On the north-east coast of Britain there was a considerable proportion of South-Easterly winds, but over the country generally the current was largely from between South and West. Gale force was attained on 13 days at Malin Head and Blacksod Point, 11 days at Portland Bill, 10 days at Deerness, and 9 days at Jersey, Pembroke, and Valencia.

Temperature.—*Mean at sea level* ranged from slightly above 48° at Scilly and above 45° over nearly all the southern districts to below 43° over northern Scotland, 40°·5 at Fort Augustus. The absolute mean values were, with the sole exception of Valencia, above the average, the excess amounting to 3° and upwards in numerous instances, and to 3°·7 at Buntingford. *Highest* readings were attained in most places on the 22nd or neighbouring days, 60° and upwards being recorded in many localities, 62° at Dublin (Phœnix Park and Trinity College) and at several stations in England, 63° at Bawtry, Maidenhead, Brixton, and Bettws-y-Coed, and 66° at Leith. *Lowest* values occurred generally on the 3rd or 4th, 16° at Braemar, 22° at Fort Augustus, Llangammarch Wells, and Wokingham, and 23° at Felixstowe, Littlestone-on-Sea, Maidenhead, and Dublin (Phœnix Park). *Range* varied from 40° at Maidenhead and Wokingham, 39° at Dublin (Phœnix Park), and 38° at Epsom and Llangammarch Wells, to 19° at Falmouth and Portland Bill, 18° at Scilly and Blacksod Point, 16° at Deerness, and 14° at Sumburgh Head. *Vapour Pressure* ranged from 0·27 in. at Scilly, Jersey, and Holyhead, to 0·21 in. at Nairn. *Relative Humidity* at 8 a.m. or 9 a.m. was as high as 93 per cent. at Birr Castle and 92 per cent. at Clacton-on-Sea, against 84 per cent. at Liverpool and 83 per cent. at Leith.

Rainfall.—With a few exceptions the month's precipitation was in excess of the average by 3 ins. or more in several localities, 4 ins. at Laudale and Killarney, and 4·7 ins. at Valencia. Aggregates exceeding 5 ins. were numerous, and ranged up to 8·1 ins. at Killarney, 8·4 ins. at Glencarron, 8·6 ins. at Valencia, and 10 ins. at Laudale, against 1·1 in. at Newcastle and 1·2 in. at Durham and Spurn Head. At Durham there were only 11 days with rain, and some other north-east coast stations had 15, but over the country generally there were at least 20 wet days, ranging up to 29 at Roche's Point, Edenfel, and Lairg, and 30 at Valencia. Although heavy falls were frequent only a few stations had as much as an inch on any one day, and at the majority of these the fall occurred on the 10th. The heaviest fall was 1·4 in. at Glencarron.

Bright Sunshine was in excess of the average except at various stations in Scotland and about the English Channel. The deficiency at Guernsey (Fort Road) was 35 hours, at Aberdeen 41 hours, and at Deerness 43 hours, whereas Llandudno had an excess of 41 hours, Armagh of 52 hours, and Blackpool of 53 hours. The percentage of possible duration ranged from 45 at Rhyl to 21 at Manchester (Whitworth Park) and Strathpeffer, and 18 at Deerness and Fort Augustus.

Minimum Temperature on the Grass.

In January, 1905, the grass minima fell below 20° in all districts, and below 10° in districts 1 (London), 3 (England, S.), and 4 (England, E.), the absolute lowest reported being 6°·0 at Canterbury on the 2nd.

The number of days when the temperature fell below 30° varied from 6 in district 8 (Channel Islands) to 30 in district 4 (England, E.).

There was no day during the month when in one or more of the districts the minimum on the grass did not fall below 30°.

The lowest of the minima recorded in the several districts were:—9°·8 at the Royal Observatory; 11°·9 at Stokesay; 6°·0 at Canterbury; 8°·5 at Dunmow; 16°·0 at Hull; 15°·5 at Carlisle; 12°·5 at Bath and 19°·7 at Guernsey.

During February minima on the grass fell below 30° in each of the eight districts into which England and Wales have been divided for Meteorological purposes, but below 20° in only five districts. The lowest reading reported was 12°·2 at Bath on the 25th.

The number of days when the temperature on the grass was below 30° varied considerably in the various districts, from 1 in District 8 (Channel Islands) to 24 in District 4 (England, E.).

On the 14th all the grass minima reported were higher than 30°.

The lowest of the minima reported in the several districts were:—20°·1 at Kew; 19°·0 at Belvoir Castle; 23°·2 at Southampton; 19°·8 at Cambridge; 18°·0 at Hull; 16°·4 at Carlisle; 12°·2 at Bath; and 28°·0 at Guernsey.

During March the grass minima were below 30° in all districts, and below 20° in all districts except No. 5 (England, N.E.) and No. 8 (Channel Islands). The absolute lowest readings were 14°·5 at Bath on the 4th and 14°·9 at Dunmow on the 24th.

The number of days in the various districts varied from 2 in No. 8 (Channel Islands), to 25 in No. 4 (England, E.). The only days on which no station reported a temperature below 30° in either of the districts were the 11th, 14th, 15th, and 16th. On each of the remaining 27 days the grass minima fell below that point at one or more stations.

The lowest of the minima reported in the various districts were :—15°·3 at Kew Observatory ; 18°·5 at Stokesay ; 19°·0 at Portsmouth ; 14°·9 at Dunmow ; 23°·0 at Hull and Cockle Park ; 19°·0 at Stonyhurst ; 14°·5 at Bath, and 24°·2 at Guernsey.

Maximum Temperature in the Sun.

The maximum in the sun is observed in most cases by means of a thermometer with blackened bulb, exposed *in vacuo*, at a height of 4 feet above the ground.

The highest solar maxima reported in January, 1905, ranged from 69°·0 at the Royal Observatory, and 69°·9 at Camden Square, to 93°·0 at Llandudno and 110°·2 at Guernsey. The latter reading was recorded on the 12th of the month, the next highest reading at this station being 97°·0 on the 31st.

During February the maxima in the sun exceeded 100° in all districts except No. 1 (London) and No. 5 (England, N.E.). The highest observed was 109°·0 at Bath on the 19th.

At Barnet nothing higher than 82°·8 was recorded, and at Carlisle the highest was only 78°·0.

During the month of March the maxima in the sun exceeded 100° in all the districts, and exceeded 110° in all except No. 5 (England, N.E.).

The highest reading reported was 125°·2 at Nottingham on the 29th ; the next highest being 119°·9 at Dunmow, 119°·2 at Guernsey, and 118°·5 at Shrewsbury. 118°·0 was observed at Portsmouth, Stonyhurst, Plymouth, and Bath.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared under the direction of the Meteorological Council.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

List of Stations and Observers.

Station.	Observer.	Station.	Observer.
1. London:—		3. England, S.:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.B., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Camden Square	H. Robert Mill, D.Sc., LL.D.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Westminster ..	The Meteorological Council.	Portland Bill ..	The Meteorological Council.
Brixton ..	The Meteorological Council.	Eastbourne ..	R. Sheward, for the Corporation.
Norwood ..	W. Marriott.	Salisbury ..	Thos. Challis, for the Earl of Pembroke.
2. England, Central:—		Canterbury ..	A. Lander.
Sheffield ..	E. Howarth. The Weston Park Museum.	4. England, E.:—	
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	Lowestoft ..	C. W. Edwards, for the Corporation.
Wakefield ..	A. Clyde.	Clacton-on-Sea	A. W. Shadick, for the Urban District Council.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Dunmow ..	Thos. Hacking. The Countess of Warwick's Agricultural School.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Cambridge ..	R. Irwin Lynch. The Botanic Gardens.
Buxton	W. Pilkington.	Norwich .. (Brundall.)	A. W. Preston.
Cheltenham ..	A. C. Saxby, for the Corporation.	Bennington ..	Rev. J. D. Parker, LL.D.
Oxford	The Radcliffe Observatory.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Stokesay ..	Rev. W. La Touche, B.A.		
Berkhamsted	E. Mawley.		
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.

		Jersey	The Meteorological Council.
Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.	Guernsey ..	Adolphus Collenette.

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than ·2, and as an "overcast" day if the average is greater than ·8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are :—Clear sky, 0, 0, 0 ; and Overcast, 2, 2, 0.

Oxford :—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows : Rain, 86 years, 1815–1900 ; Temperature, 73 years, 1828–1900 ; Sunshine, 20 years, 1881–1900.

Name of Station, County and Height. [The figures give the height of the Cistern of the Barometer above Mean Sea Level.]	19 5.	Barometer.	Air Temperature.								Hygrometer.				Earth Temperature.		Bright Sunshine

* The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :—

For all the stations marked *a*. *b*. and *c*. the results under Barometer, Hygrometer and Cloud are based on the morni for districts. For the station marked *c*, and for Camden Square, where the wind is not observed at 9 p.m., the results them more readily comparable with the results for other stations. They, as well as the number of days of "Clear Sk

† The averages used are obtained from observations extending over 35 years, namely :—For Rainfall, 35 years, 1866–190 Sunshine, 16 years.)

‡ At the Royal Observatory the earth temperature is taken at 3 feet 2 inches below the surface ; at this station t numbers for the 1st Quarter as thus calculated, are respectively Clear Sky 0. 0, 0, and Overcast 2, 2, 0. *See* Note on page 79.

Wind Force.—Beaufort Scale (0-12) is used. The number of observations of moderate and strong wind (force 4–

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., *see* Note on page 79. At all the other stations the h of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked:—

For all the stations marked *a*. *b*. and *c*. the results under Barometer, Hygrometer and Cloud are based on the mor for districts. For the station marked *c*. the results for Wind Direction and Number of Observations of Moderate s'ations. They, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in Fr

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1866–1

‡ At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

Wind Force.—Beaufort Scale (0–12) is used The number of observations of moderate and strong wind (force

INDEX OF URBAN DISTRICTS

As constituted on 31st March 1905, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,164 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 143 were each co-extensive, at the end of March 1905, with one or more Registration Areas.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 226.] **Marriages**—*January, February, March*, 1905. **Births** and **Deaths**—*April, May, June*, 1905. [Price 9*d*.

General Register Office, Somerset House,
26th July, 1905.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1905 is estimated at 43,219,788 persons; that of England and Wales at 34,152,977, that of Scotland at 4,676,603, and that of Ireland at 4,390,208.

In the United Kingdom 299,103 *births* and 161,414 *deaths* were registered in the three months ended 30th June 1905. The natural increase of population was, therefore, 137,689. The number of *persons married* in the quarter ended 31st March 1905 was 118,866.

The birth-rate in the United Kingdom in the *second* quarter of 1905 was 27·8, and the death-rate 15·0, per 1000 of the estimated population. The marriage-rate in the *first* quarter of 1905 was 11·2 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

According to the returns issued by the Board of Trade, it appears that 134,745 emigrants embarked, last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1,345 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 81,843, of whom 51,356 were English, 13,515 Scottish, and 16,972 Irish, whilst 52,902 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 1,504; Scotland, 2,890; and Ireland, 3,866. Compared with the averages in the three preceding second quarters, the proportion of English emigrants showed an increase of 17·1 per cent., that of Scottish emigrants an increase of 31·1 per cent., and that of Irish emigrants a decrease of 5·2 per cent.

2875 Wt 5/05 D & S 3 21838

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,044 registration sub-districts of England and Wales during the three months ended 30th June 1905; and the MARRIAGES in 15,551 churches or chapels, in 14,169 registered places of worship unconnected with the Established Church, and in 636 Superintendent Registrars' Offices, during the three months ended 31st March 1905.

Marriages.

During the *first* quarter of 1905 the marriages of 90,260 persons were registered, being equal to an annual rate of 10·7 persons married per 1000 of the estimated population, against an average rate of 11·3 per 1000 in the first quarters of the ten years 1895–1904.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 7·8 in Northamptonshire, 8·2 in Hertfordshire, 8·4 in Essex, 8·5 in Surrey and in Buckinghamshire, 8·7 in Worcestershire, and 8·8 in Cambridgeshire; the highest rates were 12·4 in Monmouthshire, 12·5 in Devonshire, 12·6 in Cumberland, 12·8 in Glamorganshire, and 13·1 in Northumberland.

Births.

The births registered in the *second* quarter of 1905 numbered 236,767, and were in the proportion of 27·8 annually per 1000 of the population; this is the lowest birth-rate recorded in any second quarter since civil registration was established. The mean rate in the ten preceding second quarters was 29·4. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 21·3 in Sussex, 21·8 in Cornwall, 22·0 in Herefordshire, 23·1 in Bedfordshire, 23·4 in Oxfordshire, and 23·5 in Devonshire and in Somersetshire; the highest rates were 31·9 in Staffordshire, 32·4 in Carmarthenshire, 32·6 in Northumberland, 34·9 in Durham, 35·2 in Glamorganshire, and 35·8 in Monmouthshire.

In 76 great towns the birth-rate averaged 28·5 per 1000, ranging from 17·3 in Bournemouth, 17·9 in Hastings, 19·0 in Hornsey, 20·2 in Halifax, 21·3 in Northampton, and 21·7 in Bury and in Bradford, to 34·7 in Sunderland, 35·0 in Middlesbrough and in Tynemouth, 35·2 in St. Helens, 38·2 in Merthyr Tydfil, and 38·6 in Rhondda. In 141 smaller towns the mean birth-rate was 27·4 per 1000, whilst in the remainder of England and Wales, excluding these 217 towns, it was 27·1.

Natural Increase of Population.

The natural increase of population in England and Wales during the quarter by excess of births over deaths was 113,726, against 105,004, 117,850, and 114,669 in the second quarters of 1902, 1903, and 1904 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 28*s.* 5*d.*, 30*s.* 3*d.*, and 30*s.* 6*d.* respectively in the preceding three quarters, was 30*s.* 11*d.* last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, $4\frac{3}{8}d.$; of prime beef, $6\frac{7}{8}d.$; of inferior mutton, $5\frac{6}{8}d.$; of prime mutton, $8\frac{6}{8}d.$ Compared with the average prices in the preceding three months, the mean price of inferior beef showed an increase of $\frac{1}{8}d.$, while that of prime beef showed a decrease of $\frac{2}{8}d.$ The mean prices of inferior mutton and of prime

mutton showed respectively a decrease of $\frac{1}{8}d.$ and a decrease of $\frac{3}{8}d.$ There were no quotations of sea-borne coal in the London Market last quarter. The mean price of Consols was 90*l.* 9*s.* 6*d.*, having been 89*l.* 17*s.* 0*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England during the quarter was 2*l.* 10*s.*, having continued at that figure since 9th March, 1905.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 772,814, of whom 241,520 received in-door, and 531,294 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·6 per 1000, against 21·2 and 22·0 per 1000 respectively in the second quarters of 1903 and 1904.

Meteorology.

A detailed report on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, prepared in the Meteorological Office, will be found on pp. 72–89.

In April, the weather was, upon the whole, cool and changeable, the wind shifting through nearly all points of the compass, and occasionally blowing strongly in the west and north. Snow showers occurred in many parts of the kingdom between the 5th and 10th, and again on the 18th and 19th, and thunderstorms were experienced on several occasions, sporadically as a rule, but rather generally in the North and East of England on the 14th. A smart shock of earthquake was reported at many places in the North and Central parts of England on the early morning of the 23rd.

After a wet and stormy spell at the beginning of May, the weather improved very materially, the remainder of the month being, upon the whole, fair and very dry. The mean temperature was slightly above the average, but the nights were often cold, a ground frost being experienced in many districts between the 8th and 12th, and a still sharper frost on the night of the 22nd, the latter resulting in a considerable amount of damage to vegetation, and especially to the fruit blossoms. Thunderstorms and heavy rain occurred in the South and East of England on the 30th and 31st.

In the western and northern districts the fine weather of May continued throughout the earlier part of June, the prolonged drought resulting in many places in a serious shortage in the water supply and a decided check in the growth of vegetation. In the South and East of England the weather between about the 5th and 12th of the month was essentially different from that reported in the north, heavy rain falling at frequent intervals, with occasional thunder and lightning. In the week ending June 10th, the rainfall over our eastern counties amounted to five times, and over our southern counties to six times, as much as the average. Towards the middle of the month some copious rains were experienced also over the northern districts, the weather for the remainder of the period being rather changeable generally, with thunder and lightning in most places.

The *mean temperature* of the quarter differed but little from the average, a slight excess being reported in most of the Eastern, Central and Southern districts (but not in England East), and a slight deficiency in the Western parts of the country. At some places in the East and South-east the highest shade readings occurred on May 28th or 29th, when the thermometer rose above 80° in many places, and reached 84° in London (at Brixton). Another spell of warmth occurred in the last week of June, when the thermometer again exceeded 80° in many parts of the country. The lowest readings

occurred as a rule between April 7th and 9th, when the sheltered thermometer fell below 25° at many of the northern and central stations, and slightly below 20° in England North-west (at Carlisle). In some portions of England South and South-west the thermometer reached its minimum level on May 22nd or 23rd. Allusion has already been made to the sharp ground frost which occurred on the night of the earlier date.

The *rainfall* measured in London during the quarter amounted to 7·2 inches, being 1·8 inch (or 33 per cent.) in excess of the normal. An excess of rain, due largely to the wet weather in the early part of June, was reported in fact over the whole of England South and East, but in other districts there was a deficiency—slight in the South-west, but rather large over the Northern and Midland Counties. The heaviest falls in one day occurred on June 5th, when amounts exceeding an inch were recorded at most places in the East and South of England, the largest quantities reported being 2·5 inches at Southampton and 2·0 inches at Dungeness.

The duration of *bright sunshine* in London during the quarter amounted to 487 hours, and agreed very closely with the average. In most other localities there was a deficiency—slight in the Eastern and Central districts, but rather considerable in England South-west and the Channel Islands, where the total duration was respectively 12 and 11 per cent. below the average. In England North-east the amount was slightly in excess of the normal, while in England North-west there was a still larger excess.

Deaths.

The deaths registered in England and Wales last quarter numbered 123,041, and were in the proportion of 14·4 annually per 1000 persons living; this is the lowest death-rate recorded in any second quarter since civil registration was established. The mean rate in the ten preceding second quarters was 16·2. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 11·3 in Middlesex, 11·5 in Essex, 11·6 in Surrey, 11·8 in Bedfordshire, 11·9 in Hertfordshire and in Buckinghamshire, to 16·1 in Durham and in Cumberland, 16·3 in the North Riding of Yorkshire, 16·6 in Monmouthshire and in Carmarthenshire, 16·7 in Glamorganshire, and 19·2 in Denbighshire.

The 123,041 registered deaths included 64,058 of males and 58,983 of females, the death-rate among males being 15·6, and that among females 13·4, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding second quarters the death-rate of males showed a decrease of 1·8, and that of females a decrease of 1·6, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 116 is to 100, the mean proportion in the second quarters of the ten preceding years having been the same.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1905 is estimated at more than fifteen and a half millions, the death-rate was 14·7 per 1000 living, or 0·3 above that of the whole country. The rates in the several towns ranged from 7·1 in Hornsey, 8·4 in Leyton, 8·7 in Kings Norton, 9·4 in Handsworth (Staffs.), 9·8 in Willesden, and 9·9 in East Ham, to 18·5 in West Bromwich and in Wigan, 19·5 in Oldham, 20·0 in Tynemouth, 21·4 in Middlesbrough, and 22·4 in Merthyr Tydfil.

In 141 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at about four and three quarter millions in the middle of 1905, the death-rate was 13·6 per 1000 living, or 1·1 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than thirteen and three-quarter millions, of whom nearly six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 14·5.

Mortality at Different Ages.

Of the 123,041 deaths registered last quarter, 25,199 were those of infants under one year of age, 58,325 those of persons aged between one year and sixty years, and 39,517 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was 106 per 1000, the average in the ten preceding second quarters having been 121. Among registration counties with populations exceeding 100,000 persons, the lowest proportions per 1000 births were 63 in Hertfordshire, 69 in Dorsetshire, 70 in Wiltshire, 71 in Surrey, 76 in Herefordshire, 77 in Buckinghamshire, and 79 in Somersetshire. The highest proportions were 118 in Warwickshire, 119 in Monmouthshire, 120 in Lancashire and in Durham, 122 in Staffordshire, 127 in Denbighshire, and 129 in Glamorganshire.

In the 76 great towns infantile mortality averaged 112 per 1000 births, being 6 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 55 in Hornsey, 68 in Leyton, 71 in Handsworth (Staffs), 76 in Burton on Trent, and 78 in Croydon and in Brighton; the highest were 146 in Tynemouth, 148 in Oldham, 150 in Halifax and in Rhondda, 161 in Merthyr Tydfil, and 162 in Hanley. Among the 141 smaller towns infantile mortality averaged 110 per 1000 births, ranging from 25 in Bromley, 39 in Aldershot, 46 in Tunbridge Wells, 50 in Cambridge, 51 in Guildford, and 52 in Watford, to 172 in Cannock, 174 in Stoke upon Trent, 175 in Burslem, 178 in Pontypridd, and 184 in Hyde. Excluding these 217 towns, infantile mortality in the remainder of England and Wales was in the proportion of 98 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·6 per 1000 of the estimated population at this group of ages, being 0·9 below the mean rate in the ten preceding second quarters. In the 76 great towns the mean mortality at this age-group was 8·2 per 1000, ranging from 3·4 in Hornsey, 3·5 in Kings Norton, 4·2 in Leyton, 4·5 in Handsworth (Staffs.), 5·3 in Willesden, and 5·6 in East Ham, to 11·1 in Sunderland, 11·3 in Tynemouth, 11·6 in West Bromwich, 12·5 in Oldham, 13·7 in Middlesbrough, and 13·8 in Merthyr Tydfil. In the 141 smaller towns the mortality at this age-group averaged 7·1 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 62·7 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding second quarters having been 66·0. In the 76 great towns the mean mortality at this age-group was 64·3 per 1000, the lowest rates being 43·1 in Leyton, 47·3 in Hornsey, 47·8 in Walsall, 50·7 in Willesden, 51·1 in Burton on Trent, and 52·3 in Kings Norton, and the highest, 79·8 in Rhondda, 80·6 in Middlesbrough, 80·7 in Preston, 81·9 in Wigan, 82·3 in Huddersfield, and 83·8 in Rochdale. In the 141 smaller towns the rate averaged 61·3 per 1000.

Compared with the mean rates in the ten preceding second quarters, the mortality of infants under one year of age showed a decrease of 12·4 per cent.,

that of persons between one year and sixty years of age a decrease of 10·6 per cent., and that of persons aged sixty years and upwards a decrease of 5·0 per cent.

Mortality from certain Epidemic Diseases.

The 123,041 deaths from all causes include—

3,894	that were attributed to	measles,	
2,509	„	„	whooping-cough,
1,189	„	„	diarrhœa,
1,096	„	„	diphtheria,
856	„	„	scarlet fever,
618	„	„	"fever,"
32	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 10,194 deaths were referred during the quarter, being in the proportion of 1·19 annually in each 1000 living at all ages and of both sexes, or 0·25 per 1000 below the mean proportion in the second quarters of the preceeding ten years.

The rate of mortality from measles last quarter exceeded the decennial average rate for the quarter, whilst the rates from each of the other diseases were below the respective averages.

Measles was the registered cause of 3,894 deaths last quarter, corresponding to an annual rate of 0·46 per 1000 living at all ages, which is higher by 0·03 than the decennial average for the quarter. Of the 55 Registration counties eight were free from measles fatality throughout the quarter; among the counties with populations exceeding 100,000 persons, the disease was most fatal in Hampshire, where the rate was 0·63 per 1000, in Nottinghamshire 0·65, in Warwickshire 0·67, in Durham 0·70, in Cumberland 0·76, in Monmouthshire 1·04, in Staffordshire 1·07, in Glamorganshire 1·08, and in Denbighshire 1·49. In Buckinghamshire the rate was as low as 0·02 per 1000, in Norfolk 0·03, and in Sussex 0·04. In the 76 great towns measles caused an average mortality of 0·56 per 1000. From 12 of these towns no deaths from measles were returned. Among the remaining great towns, the highest rates were 2·37 in Smethwick, 2·50 in Sheffield, 2·78 in Coventry, 2·94 in Warrington, 3·42 in Merthyr Tydfil, and 5·14 in West Bromwich. In the 141 smaller towns the death-rate from measles averaged 0·53 per 1000, the disease showing exceptional fatality in Tipton, Cannock, Widnes, Mansfield, Pontypridd, and Dudley. In the remainder of England and Wales measles caused an average death-rate of 0·31 per 1000. Among registration districts and sub-districts outside the 217 chief towns, measles was especially fatal in Tiverton, Wellington (Salop), Maryport, Gelligaer, Wrexham, and Bettwsycoed.

Whooping-cough was returned as the cause of 2,509 deaths during the quarter, giving an annual rate of mortality equal to 0·29 per 1000 living, which rate is 0·09 below the decennial average for the second quarter of the year. No deaths from whooping-cough were registered last quarter either in Huntingdonshire, or in Radnorshire. Among counties with populations exceeding 100,000 persons, the rate was as low as 0·03 in Shropshire and in Carnarvonshire, and did not exceed 0·11 per 1000 in Somersetshire, Leicestershire, or Carmarthenshire. The mortality rose to 0·45 in London and in Durham, 0·46 in Cornwall, 0·51 in Essex, 0·52 in Middlesex, and 0·53 in the East Riding of Yorkshire. Among the 76 great towns, the average mortality attributed to this disease was 0·37 per 1000. In 13 of these towns no deaths were attributed to whooping-cough during the quarter, but the mortality was equal to 0·88 in West Ham, 0·96 in Smethwick, 0·98 in Middlesbrough, 1·10 in Tottenham, 1·27 in Tynemouth, and 1·43 in Hanley. In the 141 smaller towns whooping-cough was fatal on the average to 0·28 per 1000 of the population, and among these towns, showed exceptional

fatality in Felling, Stoke, Pontypridd, Fenton, Hebburn, and Mansfield. In the remainder of England and Wales, the death-rate from this disease averaged 0·22 per 1000. Among registration districts and sub-districts outside the 217 chief towns, whooping-cough was exceptionally fatal in Halstead, Ixworth, Newent, Burbage, Whitford, and Denbigh.

Diarrhœa was the cause of 1,189 deaths during the quarter—a number corresponding to a rate of 0·14 per 1000 living, which is 0·05 below the average rate in the second quarters of the previous ten years. No deaths from diarrhœa were returned from the counties of Huntingdonshire, Herefordshire, Radnorshire, Montgomeryshire, Merioneth or Anglesey. In counties with populations exceeding 100,000 persons the rates ranged from 0·01 in Wiltshire, 0·02 in Buckinghamshire, to 0·19 in London, Derbyshire, and Durham, 0·20 in Glamorganshire, and 0·24 in Staffordshire and in the North Riding of Yorkshire. In the 76 great towns diarrhœa was fatal in the average proportion of 0·17 per 1000; in six of these towns no deaths from this disease were registered; among the remaining great towns the highest rates were 0·37 in Middlesbrough, 0·41 in West Bromwich, 0·43 in Hanley and in Oldham, and 0·52 in Wolverhampton. In the 141 smaller towns diarrhœa caused an average mortality of 0·13 per 1000, and among them was most fatal in Longton, Abertillery, Barry, Cannock, Hebburn, and Ilkeston. In the remainder of England and Wales diarrhœa was fatal at the rate of 0·10 in each 1000 of the population.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was the assigned cause of 1,096 deaths last quarter. which were equal to an annual death-rate of 0·13 per 1000 of the population, or 0·07 less than the average rate in the ten previous second quarters. No deaths from diphtheria were returned from the counties of Rutlandshire, Westmorland, Cardiganshire, Radnorshire, or Montgomeryshire, and the mortality from that disease in counties with populations exceeding 100,000 persons ranged from 0·02 per 1000 in Bedfordshire and in Dorsetshire, 0·03 in Worcestershire and in Hertfordshire, and 0·05 in Sussex and in Gloucestershire, to 0·20 in Somersetshire and in Cambridgeshire, 0·21 in Durham, 0·24 in Monmouthshire and in Denbighshire, and 0·25 in Lincolnshire. In the 76 great towns diphtheria caused an average mortality equal to 0·13 per 1000 annually. Among these towns there were four, viz., Great Yarmouth, Smethwick, Warrington, and Barrow in Furness, in which no deaths from this disease were registered; in the other great towns the rates rose to 0·27 per 1000 in St. Helens, 0·29 in South Shields, 0·31 in Norwich, 0·42 in Salford, 0·50 in Hanley, and 0·51 in West Hartlepool. In the 141 smaller towns diphtheria was fatal on the average to 0·14 in each 1000 of the population, and showed the greatest proportional fatality in Longton, Jarrow, Lincoln, Dewsbury, Cambridge, and Ebbw Vale. In the remainder of England and Wales, diphtheria caused an average mortality of 0·13 per 1000. Among registration districts and sub-districts outside the 217 chief towns, the mortality from this disease was excessive in Methwold, Blagdon, Middlewich, Crowle, and Tremadoc.

Scarlet fever was the stated cause of 856 deaths last quarter, giving an annual death-rate equal to 0·10 per 1000 living, which is lower by 0·02 than the decennial average rate for the second quarter of the year. Of the 55 registration counties in England and Wales not fewer than 9 were free from scarlet fever mortality throughout the quarter. The counties with populations exceeding 100,000 persons that showed the highest scarlet fever death rates were East Riding of Yorkshire and Glamorganshire 0·13, Lincolnshire 0·14, Middlesex and Lancashire 0·17, West Riding of Yorkshire 0·19, Derbyshire 0·21, and Carmarthenshire 0·25. The average rate of mortality from this disease in the 76 great towns was 0·11 per 1000. From 12 of these towns no scarlet fever deaths were returned. Among the other towns the highest rates were 0·26 per 1000 in Liverpool, 0·28 in Burnley, 0·35 in Plymouth, 0·43 in Oldham, 0·45 in Bootle, and 0·54 in Blackburn. In the 141 smaller towns scarlet fever was fatal in the average proportion of 0·10 per 1000 living: it caused

the greatest mortality in Darwen, Aberdare, Pontypridd, Lancaster, Batley, and Llanelly. In the remainder of England and Wales the death-rate from this disease was 0·09 per 1000 living. Among registration districts and sub-districts outside the 217 chief towns, scarlet fever showed excessive fatality in Norton, (Staffs.), Stamford, Denton, and Selby.

"*Fever*" (including the principal forms—*typhus*, *enteric fever*, and "*pyrexia*" of uncertain origin) was the registered cause of 618 deaths last quarter. These deaths were equal to an annual death-rate of 0·07 per 1000, which is below the decennial average rate for the second quarter by 0·03 per 1000. There were 6 counties in which no deaths from "fever" were registered last quarter. Among counties with populations exceeding 100,000 persons, the highest "fever" death-rates were 0·10 in the North Riding of Yorkshire and in Durham, 0·11 in Staffordshire and in Lancashire, 0·15 in Glamorganshire, 0·25 in Lincolnshire, and 0·45 in Cambridgeshire. In the 76 great towns the average mortality from "fever" was equal to 0·07 per 1000 of the aggregate population. There were 10 of these towns that were free from "fever" mortality. In the remaining towns the highest rates from "fever" were 0·18 per 1000 in West Bromwich, Grimsby, and Warrington, 0·21 in Coventry and in Huddersfield, and 0·33 in Merthyr Tydfil. In the 141 smaller towns the average rate of mortality from "fever" was 0·09 per 1000; among these towns the disease showed the highest proportional fatality in Gravesend, Widnes, Farnworth, Wednesbury, Ebbw Vale, and Lincoln. In the remainder of England and Wales, "fever" caused an average death-rate of 0·07 per 1000 living.

Small-pox was fatal in 32 instances last quarter, as compared with 95, 120, 134, 155, and 73 respectively in the five quarters immediately preceding. Of the deaths from small-pox, 21 were referred to one or other of the 217 towns; of these 21 deaths, 5 belonged to London, 4 to Southampton, and 3 to Bradford.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4,828 last quarter, and corresponded to an annual rate of 0·57 per 1000 of the population, against an average of 0·60 in the ten preceding second quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·22 in Bedfordshire, 0·30 in Berkshire, 0·37 in Dorsetshire, 0·40 in Denbighshire, 0·41 in Norfolk, and 0·42 in Wiltshire; the highest rates were 0·67 in Carnarvonshire, 0·69 in Devonshire and in Monmouthshire, 0·70 in Carmarthenshire, 0·72 in Northumberland, and 0·94 in Glamorganshire. In the 76 great towns the mean rate was 0·59 per 1000 living; among the several towns the rate was only 0·08 in Burton-on-Trent, 0·10 in Hornsey, 0·17 in Kings Norton, 0·19 in Croydon and in Handsworth (Staffs.), 0·21 in Reading, and 0·23 in Bolton; but it rose to 0·84 in Stockton on Tees, 0·85 in Cardiff, 0·87 in Sunderland, 0·88 in Newcastle-on-Tyne, 1·19 in Merthyr Tydfil, and 1·89 in Rhondda.

Certification of Causes of Death.

Of the 123,041 deaths registered in England and Wales last quarter, the causes of 112,653, or 91·5 per cent., were certified by registered medical practitioners, and the causes of 8,452, or 6·9 per cent., by coroners after inquest; whilst the causes of the remaining 1,936, or 1·6 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding second quarters having been 1·9 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Hertfordshire, Wiltshire, Somersetshire, Gloucestershire, Cheshire, the East Riding of Yorkshire, and Glamorganshire, but it reached 3·0 in Shropshire, in Warwickshire, and in Denbighshire, 3·3 in Northamptonshire, 3·4 in Durham, 3·8 in Bedfordshire, and 4·0 in Herefordshire. In the 76 great towns the

mean proportion of uncertified deaths was 1·1 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, Southampton, Great Yarmouth, Plymouth, Devonport, Derby, Stockport, Birkenhead, Oldham, Huddersfield, York, Tynemouth, and Cardiff, the proportion per cent. rose to 3·8 in Liverpool, 4·4 in Rotherham, 4·5 in Warrington, 5·0 in St. Helens and South Shields, and 7·4 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 8,452, or 6·9 per cent. of the total deaths, the mean proportion in the ten preceding second quarters having been 6·5 per cent. In the 76 great towns the proportion of inquest cases was 7·9 per cent., ranging from 2·8 in Reading, 2·9 in West Bromwich, 3·0 in Burton on Trent, 3·4 in Hornsey and in South Shields, and 3·8 in Middlesbrough, to 10·2 in Grimsby, 10·5 in Southampton, 10·9 in Cardiff, 11·7 in Rhondda, 12·1 in Tottenham, and 13·8 in Derby.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 21,840, or 17·8 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding second quarters having been 15·2 per cent. In the 76 great towns the deaths in public institutions averaged 24·1 per cent. of the total deaths, the lowest percentages in the several towns being 2·6 in Rhondda, 6·0 in Smethwick, 6·3 in Handsworth (Staffs), 6·7 in Hornsey, 7·3 in Merthyr Tydfil, and 7·4 in Gateshead; and the highest 23·0 in Birmingham, 23·8 in Manchester, 24·2 in Brighton, 25·2 in Salford, 31·1 in Liverpool, and 38·8 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London that occurred in the London Fever Hospital, in the Metropolitan Asylums Board Hospitals, and in the Middlesex County Lunatic Asylum, within the County of London. The death-rate, thus computed, was equal to 14·3 annually per 1000 living (Table VI.). If, however, all the deaths of non-Londoners that occurred in hospitals or other public institutions in London be excluded, the death-rate will not exceed 13·8 per 1000. Table X. shows the death-rate in London after this further correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the Metropolitan Boroughs are also shown, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged.

Edinburgh, Glasgow, Dublin, and Belfast.

The annual death-rate per 1000 living last quarter was 16·1 in Edinburgh, 18·5 in Glasgow, 20·4 in Dublin, and 19·5 in Belfast, against 14·3 in London.

Colonial and Foreign Cities.

The Registrar-General has been favoured with weekly returns of vital statistics by the authorities of twenty-eight of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XII.). Excluding the Indian Cities, the highest and lowest

annual birth and death-rates during the second quarter of 1905 were as follows :—

BIRTH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Breslau	31·4	Paris	18·9
Munich	30·6	Brussels	19·5
Trieste	30·2	Venice	23·2
Christiania	28·8	Berlin	23·3
Toronto	27·9	Prague	23·7
Copenhagen	27·9	Stockholm	24·3
		London ... 27·0	

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Moscow	32·0	Chicago	13·1
St. Petersburg	28·1	Antwerp	13·9
Bucharest	27·5	Brussels	13·9
Prague	25·1	Amsterdam	14·3
Trieste	23·3	Hamburg	15·9
Breslau	23·2	Stockholm	16·2
		Rio de Janeiro	16·2
		London ... 14·3	

Small-pox caused 47 deaths in Rio de Janeiro, 41 in Moscow, 25 in St. Petersburg, 21 in Paris, and 17 in Chicago.

Measles was most fatal in proportion to population in St. Petersburg, Vienna, Venice, Buda Pesth, and Amsterdam ; *scarlet fever* in St. Petersburg, Moscow, Stockholm, Buda Pesth, and Berlin ; *diphtheria* in Toronto, St. Petersburg, New York, Christiania, and Moscow ; *whooping-cough* in Christiania, Munich, Chicago, Amsterdam, Bucharest, and St. Petersburg ; "*fever*" in St. Petersburg, Philadelphia, and Venice ; and *diarrhœal diseases* in Moscow, St. Petersburg, Prague, Munich, Breslau, and Venice.

Infantile Mortality.—Among those towns for which the figures are available, the proportions of deaths among children under one year of age to 1000 registered births ranged from 90 in Stockholm, 103 in Paris, 114 in Amsterdam, and 116 in Brussels, to 223 in Breslau, 224 in Prague, 226 in Munich, and 253 in Bucharest.

INDIAN CITIES.—The death-rate was equal to 44·5 per 1000 in Madras, 45·4 in Calcutta, and 83·3 in Bombay. *Small-pox* caused 609 deaths in Bombay, 72 in Calcutta, and 45 in Madras ; *measles* caused 314 deaths in Bombay. Under the heading "*fever*" 7,998 deaths were classed in Bombay, 5,194 in Calcutta, and 939 in Madras, including respectively, 7,320, 4,156, and 10 deaths from *plague*. The mortality from *diarrhœal diseases* was excessive in each of these Indian cities ; *Asiatic cholera* caused 312 deaths in Calcutta.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the second quarter of the year 1905 (*see* pages xxv-xxx).

TABLES.

TABLE V.—**76 Great Towns.—Population; Births, Deaths,** and **Meteorology** in the 13 Weeks ended **1st July, 1905.**

NOTE.—The 76 Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TOWNS.	Estimated Population in the middle of 1905.	Births.	Deaths.	The Deaths registered include: Deaths of		Deaths from									Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.	Mean Temperature (Degrees Fahr.).	Rainfall (Inches).	TOWNS.
				Infants under 1 Year of Age.	Persons aged 60 Years and upwards.	Principal Epidemic Diseases.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Violence.

TABLE VII.—**One hundred and forty-one smaller Towns.—Population; Births and Deaths in the QUARTER ended 30th June, 1905.**

NOTE.—The 141 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 persons at the Census of 1901. They are arranged alphabetically under the Registration Counties in which they are situated. The Registrars alone must be considered responsible for the accuracy of the figures upon which these Returns are based.

* The figures in this table, excepting those for London, which are derived from Table IX., are compiled and furnished to the Registrar-General by the Medical Officer of the Local Government Board.

† The figures for Southsea District of Portsmouth are—population (1901), 18,612; small-pox, nil; scarlet fever, 6; diphtheria (including membranous croup), 2; typhus, nil; enteric fever, 1; continued fever, nil; erysipelas, 1; and puerperal fever, nil

‡ The 3 cases of "Typhus," shown in the last Annual Summary as having been notified in this Borough, were incorrectly reported, and should have been described as 3 cases of enteric or typhoid fever.

TABLE VIII. (*continued*).—NUMBER of CASES of INFECTIOUS DISEASE NOTIFIED in certain LARGE TOW of ENGLAND and WALES during the 13 Weeks ended 1st July, 1905.*

In this Table 0·00 indicates that the deaths were too few to give a rate of 0·005; where *no death* occurred, – is inserted.

Note.—The rates for the County of London do not in all cases agree with those in Table vi., page xvii.; for explanation, see page vii.

* Formerly described as "Simple Continued Fever."

The *Registration Districts*, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[a] See page 2, note [b].

[b] For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—Registration Districts.

No.	Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages: Registered in Quarter ended 31 Mar. 1905.	Births: Registered in Quarter ended 30 June 1905. [a] The *Registration Sub-districts* (2044 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

[b] See page 2, note [b].

[c] See page 6, note [b].

[a] 618 : 3.—Of the 43 deaths from measles, 18 were registered during May and 23 during June; between the 1st and 19th ult. 5 more deaths from this disease were registered.
[b] 625 : 3.—Of the 4 deaths from diphtheria, 3 occurred in the Ynyscynhaiarn Urban District.
[c] 627 : 1.—Of the 9 deaths from measles, 7 occurred in the parish of Llanllyfni
[d] 631 : 3.—The 5 deaths from whooping cough occurred in Holyhead Urban District.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 30TH JUNE, 1905.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE QUARTER ENDED JUNE 30TH, 1905.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 153 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

APRIL, 1905.

General Summary.—Although not of a stormy character the month of April was marked by a considerable number of disturbances in the neighbourhood of our islands, the weather generally being changeable, unsettled, and exceptionally dull, with frequent, but as a rule not heavy, showers of rain and hail in most localities, of sleet or snow in the northern districts, and on the 6th slight snow extended to the southern counties of England. Thunderstorms occurred on the 4th in Scotland, and on the 14th, 15th, and 16th in various parts of England and Wales, thunder or lightning alone being reported by a few observers on the 1st and 23rd. The thunderstorm of the 16th originated near Tunbridge Wells about 2 p.m., and travelling westward it passed over London, South Bucks, Oxford, Hereford, and thence to Pembroke by 6.15 p.m., at an average rate of over 50 miles an hour. At about 1.35 a.m. on the 23rd, Easter Sunday, slight earthquake shocks were experienced in many localities in the northern half of England. About this date destructive earthquakes occurred in India and Persia, and others of slight intensity in France and Switzerland. For the month as a whole pressure was everywhere a little in defect; temperature was deficient in most places; the winds were very variable in direction and of little strength; rainfall showed a moderate excess at the majority of stations; and bright sunshine was generally considerably less than usual.

Pressure.—*Mean at 8 a.m.* ranged from 29·90 ins. at Jersey to below 29·8 ins. in the far west and north, and 29·76 ins. at Sumburgh Head. Pressure was thus fairly uniformly distributed, and accorded somewhat with the normal. The values were, however, everywhere rather below the average, by 0·01 in. at Jersey and 0·09 in. at Valencia and Wick *Highest* readings occurred on the 1st over England, when 30·36 ins. was recorded at Jersey, and between the 17th and 22nd in Ireland and Scotland, 30·40 ins. being reached at Stornoway and 30·43 ins. at Sumburgh Head. *Lowest* readings were reported on the 30th, below 29 ins. at several of the western and south-western stations, and as low as 28·81 ins. at Roche's Point. On other dates there were very few instances of values as low as 29·2 ins. *Range* was moderate, from 0·9 in. in the extreme east of England to 1·5 in. in the south of Ireland.

Depressions.—The depressions which visited our islands and Western Europe during the month were numerous, but as a rule they were of no great depth. The paths followed by the central spaces of the systems were very varied, and in one instance quite exceptional. A disturbance which appeared near Bornholm, in the Baltic, on the morning of the 6th, subsequently moved round by Western Russia, Finland, and Lapland, thence westward across Northern Scandinavia to the ocean, and on the 9th and 10th took a south-westerly course down the Norwegian coast and through the Farö Channel. There were also two cases of disturbances originating about the Western Mediterranean travelling round by Austria and Poland to the Norwegian region.

Anticyclones.—Our islands were not visited by the central portion of any system of high pressure, but the conditions were under the influence of anticyclones centred to the south-westward or southward on the 1st, 6th, and 8th, and between the 16th and 24th the centre of one which had previously occupied Northern Europe moved slowly round outside our northern and western coasts down to the Bay of Biscay and across to the Western Mediterranean. It was during the progress of this system that the highest barometer readings of the month occurred—in the north of Scotland.

Winds.—Owing to the very varied paths followed by both the high and the low pressure areas the winds were distributed through all quarters of the compass. Light or moderate breezes prevailed most of the time, forces exceeding that of a strong breeze being rarely experienced, but a fresh or strong gale was felt along the south-western coasts of England on the evening of the 30th. Gale force was attained on 7 days at Deerness and on 5 days at Scilly, while the great majority of stations escaped entirely.

Temperature.—*Mean at sea level* ranged from above 49° at the Cornish and Channel Island stations to 40° in the extreme north of Scotland and to below 39° at Sumburgh Head. The general distribution was in fair agreement with the normal, but with the exception of a slight excess at a few stations in the south-west of England and south of Ireland the mean values were below the average, the deficiency being small as a rule, but in many parts of Scotland exceeding 2°, and at Sumburgh Head and Wick exceeding 3°. *Highest* readings occurred in most localities between the 13th and 16th, but maxima above 60° were rare. On the 13th Epsom reported 66° and Brixton 65°, and on the following day York, Cromer, and Margate 64°. Pembroke did not exceed 52°, Deerness 50°, and Sumburgh Head 48°. *Lowest* readings were registered generally between the 7th and 10th, but many districts had no frost in the shade. On the 7th Wick reported 20°, and on the 8th Cally and Newton Rigg had 19°, Garforth 20°, and Braemar 21°. The month's minimum at Scilly was 40°. *Range* varied from 44° at Cally, 41° at Garforth, and 39° at Newton Rigg, to 20° at Guernsey, 18° at Pembroke, and 17° at Scilly. *Vapour Pressure* ranged from 0·29 in. at Roche's Point and Scilly, to 0·20 in. at Sumburgh Head. *Relative Humidity* at 8 a.m. ranged from 92 per cent. at Pembroke and 91 per cent. at Roche's Point, to 80 per cent. at Malin Head and Liverpool, and 78 per cent. at Leith.

Rainfall.—The month's precipitation was of a moderate character, being above the average at the great majority of stations, but the excess at nearly all of them was not large, only six showing more than an inch above the usual quantity. At Llangammarch Wells the aggregate total was 5·5 ins., and the only other stations receiving more than 4 ins. were Waterford, Killarney, Laudale, Glencarron, and Valencia. Very heavy falls were all but unknown, the only ones of an inch or more in a day being 1·1 in. at Margate on the 10th, 1·1 in. at Killarney and 1·3 in. at Valencia on the 24th, 1·1 in. at Marchmont on the 28th, and 1 in. at Bettws-y-Coed and 1·2 at Llangammarch Wells on the 30th. The number of days on which precipitation was measured ranged from 27 at Sumburgh Head, Dublin (Phœnix Park), Valencia, and Cromer, and 26 at Lairg, to 14 at Clacton-on-Sea and Reading, and 13 at Eastbourne.

Bright Sunshine.—At every station there was a deficiency of sunshine, and this was more particularly noticeable over the south-western portion of the Kingdom, where the month's totals were considerably less than for any previous April since the commencement of sunshine records, in 1881, the aggregate duration being below the average to the extent of 74 hours at Jersey, 80 hours at Pembroke, 81 hours at Ventnor Hospital, 89 hours at Valencia, and 95 hours at Tenby. The percentage of possible duration ranged from 37 at Stornoway and 35 at Blackpool, to 18 at Valencia, 17 at Llangammarch Wells, 16 at Newcastle, and 14 at Birmingham.

MAY, 1905.

General Summary.—The month was generally of a very quiet character, the weather being mainly under the influence of high pressure systems lying immediately over, or in the vicinity of, our islands. The gale which marked the close of April on the southern and south-western coasts, continued into May Day, but the deep disturbance which gave rise to it soon lost its energy and passed north-eastward from the South of Ireland to the Norwegian coast. With the great preponderance of high pressure conditions the weather in nearly all districts was fine, bright and dry, such rain as fell being, usually, in insignificant showers. Snow fell at Lairg on the 25th, and hail or sleet showers in various eastern localities at other times. There were two well-defined cold weather periods, numerous instances of afternoon maximum temperatures below 50° being reported in the first week, and again from the 21st to the 25th, when even along the south coast of England, between Scilly and Margate, there were maxima as low as 50° and 51°. Much damage was occasioned by night frosts during the later cold, a grass minimum of 20° being registered at Marlborough, and below 17° at Worksop.

Thunderstorms were experienced in the south-east of England on the 30th. Early on the morning of the 1st, earthquake shocks were felt in the neighbourhood of Llangollen and Valle Crucis Abbey. For the month as a whole pressure was everywhere well in excess of the normal; the winds were variable in direction and of little strength; temperature showed a slight excess in most localities; there was a decided deficiency in the rainfall; and there was a considerable excess of bright sunshine except at some northern stations.

Pressure.—*Mean at 8 a.m.* ranged from 30·14 ins. and upwards at some of the southern stations to 30·01 ins. at Sumburgh Head. The values were everywhere above the average, the greatest excess being 0·17 in at Roche's Point, and the least 0·12 in. in the Shetlands. The distribution of mean pressure was very similar to the normal, the gradient being slight. *Highest* readings were recorded on the 4th, 30·50 ins. at Shields, on the 9th and 10th, 30·46 ins. over the western half of the English Channel, on the 13th, 30·51 ins. at Birr Castle and Blacksod Point, and from the 14th to the 18th, exceeding 30·4 ins. in many places. *Lowest* readings occurred during the passage of a deep disturbance at the beginning of the month, the mercury falling below 29 ins. at Holyhead and Donaghadee on the morning of the 1st. In the disturbances towards the close there were only a few instances of readings under 29·8 ins. at the north-western stations. *Range* was slightly less than an inch at Jersey, Clacton-on-Sea and Yarmouth, and amounted to 1·5 in. at Birr Castle, Donaghadee and Holyhead.

Depressions.—The only well-marked system of low pressure which visited our islands, or, indeed, any part of the region included in the weather reports, was that which appeared outside our south-western coasts on April 30th, and between May 1st and 3rd moved across the Irish Sea and Scotland and up the Norwegian coast. It was of considerable depth in its earliest stages, but during its progress northward it rapidly became shallower. The other disturbances of the month were few in number and of minor importance.

Anticyclones.—During the greater part of the period areas of high atmospheric pressure prevailed over Western Europe, and the central spaces of several of them visited the British Isles. On the 3rd an anticyclone began to spread in upon us from the south-westward, and thenceforward to the 23rd pressure was generally high in all districts, and as already stated above there were several days on which barometer readings from 30·4 ins. to 30·5 ins. were registered. Even after the 23rd the type of conditions over a large part of the country was anticyclonic, the centres of the systems being situated on the Continent, between the Bay of Biscay and the Baltic.

Winds.—With the numerous changes in the positions of the high and low pressure systems, the winds varied greatly in direction, Northerly to North-Easterly, and Westerly to South-Westerly being the most frequent. As a rule the various currents had not much strength. Gale force was attained on three days at Holyhead, and on two days at Dungeness and Spurn Head.

Temperature.—*Mean at sea level* ranged from 55·5° at Southampton and 55° at Foynes and Killarney to below 50° at some stations in the north-east of England, and also over the extreme north of Scotland, 45·3° at Sumburgh Head. The actual mean values generally differed but little from the average, most stations returning an excess. Alnwick and Killarney, however, had an excess of 2·4°, and Foynes of 3·2°. *Highest* readings occurred from the 15th to the 20th, and from the 28th to the 30th, the warmest day being the 29th, with 84° at Brixton and Epsom, and 80° or 81° at a few other stations in the south-east of England. In Ireland 75° was reached at Killarney on the 15th, and in Scotland at Strathpeffer on the 16th. There were, as noted above, two periods of sharp cold, with maximum temperatures from 44° to 49°. *Lowest* night values were registered from the 3rd to the 9th, and the 22nd to the 26th. Scotland and Ireland had no minima below 30°, but in England, Wokingham recorded 22° on the 23rd, Garforth 25° on the 5th, and Marlborough and Llangammarch Wells 26° on the 23rd. *Range*, as usual at this season, was generally large, exceeding 40° over a great part of the country, Garforth showing 51°, Cambridge 52°, and Epsom and Wokingham 56°. On the other hand Scilly had a range of 20° and Holyhead 21°. *Vapour Pressure* ranged from 0·33 in. at Valencia and Roche's Point, to 0·26 in. at Sumburgh Head. *Relative Humidity* ranged from 89 per cent. at Sumburgh Head, and 87 per cent. at Spurn Head to 71 per cent. at Bath, and 70 per cent. in London.

Rainfall.—There was a small excess at Eastbourne, Glencarron and Fort Augustus, but elsewhere the rainfall amounts were all below the average, the deficiency generally being large, as much as 2 ins. to 2·5 ins. at Foynes, Bath, Birmingham, Sheffield, Stonyhurst, Clifton and Arlington. The aggregate totals for the month were nearly everywhere less than 2 ins., and at the majority of stations less than an inch, but Laudale had 3·3 ins. and Glencarron 4·9 ins., whereas Bath and Clifton had only 0·07 in., and Cardiff, Guernsey and Jersey less than 0·2 in. Cronkbourne, Glencarron, Reading and Kingstown were the only stations where as much as an inch fell in a day. Birmingham and Bognor had only three days with rain, Reading and many other places four days, and the great majority of stations less than 10 days, while Glencarron had 21 days.

Bright Sunshine was less than the average in some parts of Scotland and the north-east of England, but above it in all other districts, the excess in many localities being more than 50 hours, exceeding 70 hours at Brighton, 72 hours at Westminster and 75 hours at Southampton. The largest aggregate amounts were 302 hours at Bognor, 306 at Bournemouth, and 311 at Totland Bay, thus averaging 10 hours per day. The percentage of possible duration ranged from 21 at Newcastle and 28 at Strathpeffer to 61 and upwards at several south coast stations, 64 at Bournemouth and 65 at Totland Bay.

JUNE, 1905.

General Summary.—The weather experienced over our islands during the period under review presented a remarkable resemblance to that of the corresponding month in 1903. The droughty conditions of May were maintained over all our northern and western districts through the first half of June, while in the early days of the month, due to the formation of shallow disturbances on the continental side of the Channel, a very wet North-Easterly type was established over the South-east quarter of England, lasting about a fortnight. Then the conditions were reversed, Atlantic disturbances skirting the western and northern coasts, producing copious rains in the west and north for nearly a week, the south-eastern districts having a spell of comparative dryness. Towards the close there came another change, rain falling heavily at many southern and south-eastern stations, the far west and north being again very dry. Singularly striking differences are consequently seen in the rainfall statistics, the percentage of the average quantity being 37 at Shields, 39 at Nairn, 52 at Harrogate, 57 at Birr Castle, and 59 at Sumburgh Head, while London had 239 and Dungeness 442. Thunderstorms visited most parts of the country, but they were of a sporadic character, and as a rule were not of exceptional severity. The second week was distinctly cool, there being very few instances of afternoon maximum temperatures as high as 70°, and only one station, Southampton, touched 72°. Taking the month as a whole pressure was in excess of the normal over North Britain and in defect elsewhere; the winds varied considerably in direction, a large proportion being North-Easterly, light or moderate in force most of the time, and rarely exceeding a strong breeze; temperature was generally in excess; rainfall was largely in excess over the south-eastern districts, mainly in defect in other regions; and bright sunshine was very abundant in the dry regions, very deficient in the wet.

Pressure.—*Mean at 8 a.m.* ranged from 29·91 ins. at Valencia and Blacksod Point, and 29·93 ins. at Yarmouth to between 29·95 ins. and nearly 30 ins. in a belt extending from the Shetlands to the Channel Islands. The values were above the average over Scotland and the north of England, by more than 0·06 in. at Sumburgh Head, other parts of the country showing a deficiency of more than 0·07 in. at Scilly and Valencia. The distribution of mean pressure differed entirely from the normal, being low to the westward and south-eastward instead of as usual to the far north-westward. *Highest* readings were recorded on the 22nd or 23rd, when 30·44 ins. was reached at Aberdeen, and between this and 30·4 ins. at many other stations, all exceeding 30·3 ins. *Lowest* readings occurred on the 2nd in Scotland, 29·39 ins. at Stornoway, and on the 17th to the 20th and the 28th to 30th elsewhere, 29·42 ins. at Malin Head on the 20th, and 29·51 ins. at Scilly on the 29th. *Range* was everywhere small, between 0·7 in. over the southern portion of England, and an inch in the Shetlands.

Depressions.—The centres of the depressions were in nearly every instance outside our coasts, either on the Atlantic to west and north, or on the Continent between France and Scandinavia. They were of no great depth, and seldom occasioned an increase of wind to gale force, but, as already shown above they had a most important influence on the character of the weather in their immediate neighbourhood, the heavy rains in the south-east being with the North-Easterly winds of the Continental disturbances and the rains in the west and north being with the South-Westerly current of the Ocean systems.

Anticyclones.—A high pressure area which appeared off the west of Ireland on the 5th moved north-eastward, and until the 11th it covered our northern districts and Scandinavia, the barometer rising to 30·3 ins. in the North of Scotland on the 8th. An anticyclone which had moved north-eastward across Spain to the western half of the Continent was on the 22nd transferred to our islands, and on the 25th it passed on to Scandinavia, having produced the highest pressure of the month.

Winds.—As at different times during the month high or low pressure areas were found all round our islands the winds were, naturally, very variable in direction, a large proportion being from Easterly points. Gale force was reached on 3 days at Blacksod Point, and on 2 days at Dublin, Holyhead, Pembroke, and Spurn Head.

Temperature.—*Mean at sea level* ranged from slightly above 61° in the Thames Valley region, 60° in the inland part of the south of Ireland, and 59° in the west of Scotland, to 54° and under in the extreme north-east of Scotland, 51° at Sumburgh Head. The general distribution did not differ to any important extent from the normal, but the actual values were in nearly every instance above the average, the excess amounting to as much as 3° or more at Markree Castle, Stornoway, Laudale, and Lairg. *Highest* readings occurred between the 22nd and 27th, when maxima of 80° and upwards were registered in many localities, 83° at Fort Augustus and Clathick, 84° at Maidenhead, and 85° at Lairg and Leith. *Lowest* values were recorded between the 5th and 11th, Crathes returning a minimum of 31°, Newton Rigg 32°, Braemar, Clathick and Garforth 34°, and Llangammarch Wells 35°. *Range* was generally large, exceeding 40° in many districts, amounting to 45° at Bettws-y-Coed, 46° at Fort Augustus, Crathes, and Braemar, 47° at Newton Rigg, and 49° at Clathick and Lairg. On the other hand, Folkestone had only 23°, Scilly 22°, Dungeness 21°, and Deerness 16°. *Vapour Pressure* ranged from 0·42 in. at Clacton-on-Sea and Dungeness, to 0·33 in. at Wick and Sumburgh Head. *Relative Humidity* ranged from 88 per cent. at Portland Bill and 87 per cent. at Sumburgh Head and Spurn Head, to 77 per cent. at Leith, and 72 per cent. at Liverpool.

Rainfall.—The month was exceedingly wet over the south and east of England, as far north as York, the excess above the average increasing from north to south and west to east, so that London had an excess of 2·8 ins., Swarraton 3 ins., and Dungeness 4·6 ins. Total falls of 3 ins. and upwards were numerous within the wet area, ranging up to 4·9 ins. at Epsom, 5 ins. at Swarraton, and 5·9 ins. at Dungeness. Over the rest of the kingdom the rainfall was nearly everywhere in defect, Laudale showing a loss of 2 ins., Glasgow and Marchmont 2·2 ins., and Glencarron 2·6 ins. Very few stations in Scotland and Ireland received as much as 2 ins. in all. The number of rainy days ranged from 4 at Cockle Park and Marchmont, and 5 at Alnwick Castle and Shields to 20 at Cullompton and 21 at Arlington. No station in Ireland registered an inch of rain in a day, and Strathpeffer, with 1·1 in. on the 24th, was the only station in Scotland, while in the rainy portion of England there were many instances, mainly on the 5th, when Ventnor Hospital and Swarraton measured 1·9 in., Dungeness 2 ins., and Southampton 2·5 ins.

Bright Sunshine :—Generally speaking the dry regions had abnormally fine weather, the bright sunshine records being well above the average, the excess being 73 hours at Blackpool, 74 hours at Edinburgh, 76 hours at Stornoway, and 80 hours at Glasgow. In the wet area the absence of sunshine was just as marked, Marlborough losing 63 hours, Falmouth 68 hours and Torquay 71 hours. The percentage of possible duration ranged from 26 at Marlborough, 29 at Oxford, and 31 at Wisley and in Lon lon, to upwards of 50 at some northern stations, and 57 at Aspatria.

Minimum Temperature on the Grass.

In April, 1905, the temperature on the grass fell below 30° in all districts, and to 20° or below in all districts except No. 3 (England, South), and No. 8 (Channel Islands).

The number of days on which the temperature fell below 30° varied from 18 in districts 2 and 6 (England, Central, and N.W.) to 2 in district 8 (Channel Islands). On the 11th, 14th, 17th, and 27th–30th the grass minima did not fall below 30° in any district.

The lowest of the minima reported in the several districts were :—20°·0 at Barnet ; 16°·0 at Belvoir Castle, Grantham ; 25°·0 at Salisbury ; 18°·8 at Dunmow ; 17°·0 at Cockle Park Farm, near Morpeth ; 14°·0 at Carlisle ; 18°·0 at Bath, and 28°·3 at Guernsey, Fort Road.

During May the minimum on the grass fell below 30° in all districts except No. 8 (Channel Islands), but to 20° or below only in district No. 2 (England, Central) and district No. 7 (England, S.W.).

The lowest readings reported in the several districts were :—21°·1 at Kew ; 16°·3 at Birmingham (Edgbaston) ; 29°·0 at Portsmouth and Salisbury ; 21°·2 at Dunmow and 21°·5 at Cambridge ; 24°·0 at Hull ; 23°·2 at Carlisle ; 20°·0 at Bath ; and 31°·1 at Guernsey.

The number of days when grass minima below 30° were reported varied from 14 in district 4 (England, E.), and district 7 (England, N.W. and North Wales) to 4 in district 3 (England, S.), and 0 in district 8 (Channel Islands).

On the 1st, 8th, 14th, 18th–21st, and 28th–31st, the grass minimum did not fall below 30° in any of the districts.

During June the temperature on the grass did not fall as low as 30° in any of the districts.

The lowest of the grass minima reported in the several districts were :—38°·2 at the Royal Observatory, Greenwich ; 31°·1 at Stokesay ; 40°·0 at Salisbury ; 39°·0 at Dunmow ; 34°·0 at Hull ; 32°·5 at Carlisle ; 36°·0 at Bath ; and 47°·0 at Guernsey.

Maximum Temperature in the Sun.

The maximum in the sun is observed in most cases by means of a thermometer with a blackened bulb *in vacuo*, freely exposed to the sun's rays at a height of 4 feet above the ground.

The highest readings of such instruments, reported in April, 1905, ranged from 129°·0 at Bath, in district No. 7. on the 16th, to 103°·0 at Carlisle, in district No. 6, on the 15th.

In district No. 5 (England, N.E.), and district No. 6 (England, N.W. and North Wales), the highest solar maxima were respectively, 119°·0 at Cockle Park Farm and 115°·8 at Stonyhurst.

During May the maxima in sun ranged higher in all districts. The highest reading reported was 141°·1 on the 29th at the Royal Observatory, Greenwich, with 140°·0 on the 28th, at Cockle Park Farm, near Morpeth. In each district, except No. 6 (England, N.W. and North Wales) maxima exceeding 130° were observed. In that district, however, the highest reading was 125°·8 on the 29th at Stonyhurst, with 125°·5 at Llandudno on the 26th.

At Carlisle the highest solar maximum reported in May, 1905, was 118°·8.

In district No. 4 (England, E.), Dunmow reported 137°·3 on the 31st, and in district No. 7 (England, S.W.), Bath experienced a temperature of 138°·0 on the 29th.

In the Channel Islands (district No. 8) the highest reading during May was 134°·4 at Guernsey on the 29th.

During June the highest solar maximum reported was 150°·0 on the 3rd at the Royal Observatory, Greenwich. (In June, 1904, the highest maximum in sun was also reported at the Royal Observatory, but the reading was only 143°·0.) At three other stations maxima of 140° and upwards were observed, namely, 140°·6 at Dunmow on the 29th, 141°·0 at Cockle Park Farm on the 2nd, and 142°·0 at Bath on the 25th.

Maxima of 130° and upwards were reported in each of the eight districts.

At Manchester (Corporation Depôt in the Oldham Road) the maximum in sun did not rise above 126° in June, and at Barnet (district No. 1, London) the highest maximum for the month was only 125°·0.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

List of Stations and Observers.

Station.	Observer.	Station.	Observer.
1. London:—		3. England, S.:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.B., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Camden Square	H. Robert Mill, D.Sc., LL.D.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Westminster ..	The Meteorological Office.	Portland Bill ..	The Meteorological Office.
Brixton ..	The Meteorological Office.	Eastbourne ..	R. Sheward, for the Corporation.
Norwood ..	W. Marriott.	Salisbury ..	Thos. Challis, for the Earl of Pembroke.
2. England, Central:—		Canterbury ..	A. Lander.
Sheffield ..	E. Howarth. The Weston Park Museum.	4. England, E.:—	
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	Lowestoft ..	C. W. Edwards, for the Corporation.
Wakefield ..	A. Clyde.	Clacton-on-Sea	A. W. Shadick, for the Urban District Council.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Dunmow ..	Thos. Hacking. The Countess of Warwick's Agricultural School.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Cambridge ..	R. Irwin Lynch. The Botanic Gardens.
Buxton	W. Pilkington.	Norwich .. (Brundall.)	A. W. Preston.
Cheltenham ..	A. C. Saxby, for the Corporation.	Bennington ..	Rev. J. D. Parker, LL.D.
Oxford	The Radcliffe Observatory.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Stokesay ..	Rev. W. La Touche, B.A.		
Berkhamsted	E. Mawley.		
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.		

Station.	Observer.	Station.	Observer.
5. ENGLAND, N.E.:—		7. ENGLAND, S.W., WITH SOUTH WALES :—	
North Shields	The Meteorological Office.		
Spurn Head ..	The Meteorological Office.	Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.
Durham ..	Prof. R. A. Sampson, M.A., F.R.S.	Woolacombe ..	B. Fanshawe.
York	Oxley Grabham, for Yorkshire Phil. Soc.	St. Ann's Head, Pembroke.	The Meteorological Office.
Hull	H. B. Witty, for the Corporation.	Bristol .. .. (Clifton.)	D. Rintoul, M.A., Clifton College.
Cockle Park .. (*near Morpeth*).	A. G. Birt, for the Northumberland County Council.	Falmouth ..	The Meteorological Office.
		Barnstaple ..	Thos. Wainwright. The North Devon Athenæum.
Tealby	Rev. S. Lewin, B.A.	Bath	W. H. Symons, M.D., M.O.H., for the Corporation.
		Llangammarch Wells.	W. Black Jones, M.D.
6. ENGLAND, N.W., WITH NORTH WALES :—			
Llandudno ..	W. Little, for the Town Council.		
Liverpool .. (Bidston.)	W. E. Plummer, Bidston Observatory.		
Aspatria ..	J. Smith Hill, B.Sc. The Agricultural College.		
		8. THE CHANNEL :—	
Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.		
		Scilly	The Meteorological Office.
Carlisle.. ..	Studholme Cartmell, for the Corporation.	Jersey	The Meteorological Office.
Stonyhurst ..	Rev. W. Sidgreaves, S J. The Observatory.	Guernsey ..	Adolphus Collenette.

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than ·2, and as an "overcast" day if the average is greater than ·8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are :—Clear sky, 0, 0, 0 ; and Overcast, 1, 0, 4.

Oxford :—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows : Rain, 86 years, 1815–1900 ; Temperature, 73 years, 1828–1900 ; Sunshine, 20 years, 1881–1900.

Name of Station, County and Height. [The figures give the height of the Cistern of the Barometer above Mean Sea Level.]	1905.	Barometer. Mean Pressure, at 32° F. at Station Level.*	Air Temperature. * At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., *see* Note on page 79. At all the other stations the hou of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked: –

For all the stations marked *a*. *b*. and *c*. the results under Barometer, Hygrometer and Cloud are based on the morni for districts. For the station marked *c*. the results for Wind Direction and Number of Observations of Moderate a stations. They, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in Fren

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1866-190

‡ At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

(St. Ann's Head, Bath, Scilly and Jersey) the observing hours are 8 a.m. and 6 p.m. Greenwich time.
(Barnstaple) the observing hours are 9 a.m. and 3 p.m. local time.
(Llangammarch Wells) the observing hour is 9 a.m. local time.
rvations only, and these results are in consequence printed in French type. They have not been included in the means
1 have been multiplied by 2 in order to make them more readily comparable with the results for other stations.
ncluded in the means for districts.
perature, 30 years, 1871–1900; Sunshine, 20 years, 1881–1900.
umber of observations of calm and the number of days of gale are given in the table.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number** of each REGISTRATION DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberayron, 604.
Abergavenny, 582.
Aberystwith, 605.
Abingdon, 115.
Alcester, 397.
Alnwick, 563.

INDEX OF URBAN DISTRICTS

As constituted on 30th June 1905, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,163 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 147 were each co-extensive, at the end of June 1905, with one or more Registration Areas.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 227.] **Marriages**—*April, May, June*, 1905.
Births and **Deaths**—*July, August, September*, 1905. [Price 9*d*.

General Register Office, Somerset House,
26th October, 1905.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1905 is estimated at 43,219,788 persons; that of England and Wales at 34,152,977, that of Scotland at 4,676,603, and that of Ireland at 4,390,208.

In the United Kingdom 294,162 *births* and 153,133 *deaths* were registered in the three months ended 30th September 1905. The natural increase of population was, therefore, 141,029. The number of *persons married* in the quarter ended 30th June 1905 was 168,072.

The birth-rate in the United Kingdom in the *third* quarter of 1905 was 27·0, and the death-rate 14·1, per 1000 of the estimated population. The marriage-rate in the *second* quarter of 1905 was 15·6 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

According to the returns issued by the Board of Trade, it appears that 145,286 emigrants embarked, last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 2,974 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 84,772, of whom 53,049 were English, 15,133 Scottish, and 16,590 Irish, whilst 60,514 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 1,553; Scotland, 3,236; and Ireland, 3,779. Compared with the averages in the three preceding third quarters, the proportion of English emigrants showed a decrease of 10·5 per cent., that of Scottish emigrants an increase of 26·1 per cent., and that of Irish emigrants a decrease of 4·9 per cent.

2875 Wt 90 11/05 D & S 3 22586

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,044 registration sub-districts of England and Wales during the three months ended 30th September 1905; and the MARRIAGES in 15,562 churches or chapels, in 14,247 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, during the three months ended 30th June 1905.

Marriages.

During the *second* quarter of 1905 the marriages of 141,854 persons were registered, being equal to an annual rate of 16·7 persons married per 1000 of the estimated population, against an average rate of 17·2 per 1000 in the second quarters of the ten years 1895–1904.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 12·7 in Buckinghamshire, 13·3 in Carnarvonshire, 13·4 in Norfolk, 13·6 in Suffolk, and 13·7 in Cambridgeshire and in Cornwall; the highest rates were 18·1 in Monmouthshire, 18·2 in Nottinghamshire, 18·4 in Northumberland, 18·5 in Leicestershire, and 21·2 in Lincolnshire.

Births.

The births registered in the *third* quarter of 1905 numbered 235,205, and were in the proportion of 27·3 annually per 1000 of the population; this is the lowest birth-rate recorded in any third quarter since civil registration was established. The mean rate in the ten preceding third quarters was 29·1. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 21·3 in Sussex, 22·6 in Herefordshire, 22·8 in Dorsetshire and in Cornwall, and 22·9 in Somersetshire; the highest rates were 30·4 in Staffordshire, 30·8 in Nottinghamshire, 32·2 in Northumberland, 32·6 in Carmarthenshire, 34·1 in Durham, 34·6 in Glamorganshire, and 35·7 in Monmouthshire.

In 76 great towns the birth-rate averaged 28·2 per 1000, ranging from 17·5 in Hastings, 18·5 in Bournemouth, 19·4 in Hornsey, 20·2 in Rochdale and in Halifax, and 21·8 in Bradford, to 34·2 in Tynemouth, 35·4 in Sunderland, 36·4 in St. Helens, 36·5 in Middlesbrough, and 37·6 in Merthyr Tydfil and in Rhondda. In 141 smaller towns the mean birth-rate was 26·8 per 1000, whilst in the remainder of England and Wales, excluding these 217 towns, it was 26·6.

Natural Increase of Population.

The natural increase of population in England and Wales during the quarter by excess of births over deaths was 114,413, against 126,078, 124,855, and 103,771 in the third quarters of 1902, 1903, and 1904 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 30*s.* 3*d.*, 30*s.* 6*d.*, and 30*s.* 11*d.* respectively in the preceding three quarters, was 29*s.* 5*d.* last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, $4\frac{3}{8}d.$; of prime beef, 7*d.*; of inferior mutton, 6*d.*; of prime mutton, $8\frac{6}{8}d.$ Compared with the average prices in the preceding three months, the mean price of inferior beef remained unchanged, while that of prime beef showed an increase of $\frac{1}{8}d.$ The mean price of inferior mutton showed an

increase of $\frac{2}{3}d.$, while that of prime mutton remained unchanged. There were no quotations of sea-borne coal in the London Market last quarter. The mean price of Consols was 90*l.* 3*s.* 4*d.*, having been 90*l.* 9*s.* 6*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had remained at 2*l.* 10*s.* since 9th March, 1905, was raised on 7th September to 3*l.*, and further raised on 28th September to 4*l.* The mean rate during the quarter was 2*l.* 13*s.* 3*d.*

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 757,100; of whom 234,713 received in-door, and 522,387 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·2 per 1000, against 20·9 and 21·8 per 1000 respectively in the third quarters of 1903 and 1904.

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 72–89.

In the early part of July the weather over England was warm, but rather changeable, with occasional thunderstorms in most districts. The latter were, as a rule, of no great severity, but on the 9th they were accompanied in many places by heavy falls of rain, more than 2 inches being registered in many parts of Middlesex; at Enfield nearly $2\frac{1}{2}$ inches were recorded on this day in the space of 50 minutes. After the middle of the montb the conditions were more settled (the thermometer in the meantime remaining above the average), but at the close of the period the weather again became thundery, the storms being, in this case, distributed over the eastern and south-eastern counties. Between the 10th and 15th, and again on the 25th and 26th, a good deal of fog was reported around our western and southern coasts.

Under the influence of numerous cyclonic disturbances which reached these islands from the Atlantic the weather in August was cool, extremely unsettled, and often very windy, especially in our western and southern districts, where slight gales from the south-westward and westward were unusually frequent. Thunderstorms were experienced on several occasions (those of the 15th being very severe in the counties of Devon and Somerset), and rainfall was often heavy, the principal falls occurring in the western districts between the 2nd and 5th, and again between the 24th and 26th, in the south-western districts on the 15th, and in the southern and eastern districts on the 27th and 28th. During the severe thunderstorm of August 15th between $3\frac{1}{2}$ and 4 inches of rain were measured at stations near the mouth of the Exe. In the eastern parts of Ireland the rainfall of the 24th to 26th was far heavier than in Great Britain, and resulted in serious floods.

The unsettled weather of August continued throughout the early days of September, thunderstorms occurring in many parts of the country on the 7th and 8th, and heavy rain in Lancashire on the 9th. In the middle portion of the month a decided improvement was experienced, but, with the wind mainly from some northerly quarter (between north-west and north-east) the thermometer continued rather low, the absence of anything like summer warmth after the commencement of September being quite exceptional. The first frost of the season occurred on the night of the 14th, and was followed a week later by another touch of cold; on each occasion the thermometer on the grass fell in some places 3° or 4° below the freezing point. In the closing week of the quarter the weather again fell into an unsettled state. On the 25th and 26th a north-easterly wind, forming part of a circulation over France, brought large quantities of rain to our extreme eastern and

south-eastern stations, while on the 29th a similar air current was accompanied by thunderstorms at some of the English Channel stations.

The *mean temperature* of the quarter was below the average in the western districts, and in the Channel Islands, but above it in other parts of the country. The departure from the normal was, as a rule, small, but amounted to 1° in the London district. The highest readings, which occurred at various times in July, were lower than in several recent years. In the western and central parts of the country the thermometer did not reach 85°, but in England South it rose to 86°, while in London (at Greenwich) it rose on July 26th to 87°. The lowest readings were registered in most districts between September 13th and 16th, but in the northern parts of the country on September 21st, on each of which occasions the sheltered thermometer sank below the freezing point at several stations in the Western and Central districts. In London the thermometer did not get below 39°, while in the Channel Islands the lowest reading was 45°.

The *rainfall* measured in London during the quarter was 5·6 inches, and amounted to 86 per cent. of the average. A deficiency was reported in all other districts, less than 80 per cent. of the average being recorded in the eastern and southern portions of the country generally, and only 75 per cent. in England South. The largest individual amounts at stations included in the Tables on pp. 80–89 were 2·4 inches at Barnet on July 9th, and 1·5 inch at Cheltenham and Liverpool—at the former station on August 28th, and at the latter on July 9th.

The duration of *bright sunshine* in London amounted to just over 500 hours, and agreed very closely with the average, the proportion of the possible duration being 38 per cent. Over the southern districts generally there was a deficiency—greatest in the Channel Islands, where the total duration amounted to only 90 per cent. of the average. In the northern, eastern, and central parts of the country, the duration was in excess of the mean, the departure from the normal being greatest (14 per cent.) in England North-east. In the course of the three months the weather was therefore relatively sunniest in the north-eastern, and dullest in the southern and south-western portions, of England.

Deaths.

The deaths registered in England and Wales last quarter numbered 120,792, and were in the proportion of 14·0 annually per 1000 persons living, the mean rate in the ten preceding third quarters having been 16·5. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 10·3 in Surrey and in Hertfordshire, 10·5 in Berkshire, 10·6 in Bedfordshire, 10·7 in Dorsetshire, and 10·8 in Cambridgeshire, to 15·1 in the East Riding of Yorkshire, 15·9 in Glamorganshire, 16·1 in Northumberland and in Monmouth, 16·8 in Lancashire, and 17·1 in Durham.

The 120,792 registered deaths included 63,282 of males and 57,510 of females, the death-rate among males being 15·2, and that among females 12·9, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding third quarters the death-rate of males showed a decrease of 2·7, and that of females a decrease of 2·4, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 118 is to 100, the mean proportion in the third quarters of the ten preceding years having been 117 to 100.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1905 is estimated at more than fifteen and a half millions, the death-rate was

15·2 per 1000 living, or 1·2 above that of the whole country. The rates in the several towns ranged from 6·4 in Hornsey, 7·4 in Kings Norton, 8·3 in Handsworth (Staffs.), 9·0 in Burton on Trent, 9·2 in Bournemouth, and 10·0 in Walthamstow, to 19·4 in Manchester, 19·8 in Merthyr Tydfil, 19·9 in Liverpool and in Wigan, 20·1 in Bootle, and 22·5 in Rhondda.

In 141 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at about four and three quarter millions in the middle of 1905, the death-rate was 13·3 per 1000 living, or 1·9 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than thirteen and three-quarter millions in the middle of 1905, of whom nearly six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 13·0.

Mortality at Different Ages.

Of the 120,792 deaths registered last quarter, 36,412 were those of infants under one year of age, 51,313 those of persons aged between one year and sixty years, and 33,067 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was 155 per 1000, the average in the ten preceding third quarters having been 192. Among registration counties with populations exceeding 100,000 persons, the lowest proportions per 1000 births were 61 in Cambridgeshire, 64 in Dorsetshire, 68 in Somersetshire, 70 in Buckinghamshire, 75 in Hertfordshire, and 76 in Shropshire. The highest proportions were 174 in London, 176 in Glamorganshire, 182 in the West Riding of Yorkshire, 186 in Durham, and 200 in Lancashire and in the East Riding of Yorkshire.

In the 76 great towns infantile mortality averaged 186 per 1000 births, being 31 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 74 in Hornsey, 75 in Bournemouth, 77 in Kings Norton, 88 in Burton on Trent, 89 in Hastings, and 93 in Croydon; the highest were 261 in Sheffield, 267 in Wigan, 275 in Norwich, 277 in Stockport, 282 in Rhondda, and 354 in Grimsby. Among the 141 smaller towns infantile mortality averaged 160 per 1000 births, ranging from 17 in Guildford, 56 in Bromley, 61 in Reigate, in Winchester, and in Nelson, 63 in Colchester and in Bath, and 64 in Taunton, to 282 in Gravesend and in Gorton, 283 in Doncaster, 296 in Batley, 300 in Leigh (Lancs.), 405 in Ince in Makerfield, and 468 in Farnworth. Excluding these 217 towns, infantile mortality in the remainder of England and Wales was in the proportion of 116 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 6·6 per 1000 of the estimated population at this group of ages, being 1·2 below the mean rate in the ten preceding third quarters. In the 76 great towns the mean mortality at this age-group was 7·3 per 1000, ranging from 2·3 in Hornsey, 3·6 in Handsworth (Staffs.), 3·8 in Kings Norton, 3·9 in Burton on Trent, and 4·2 in Willesden and in Smethwick, to 9·8 in Manchester, 10·2 in Sunderland, 10·3 in Liverpool and in Middlesbrough, 11·0 in Bootle, and 11·1 in Rhondda. In the 141 smaller towns the mortality at this age-group averaged 6·0 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 51·9 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding third quarters having been 53·2. In the 76 great towns the mean mortality at this age-group was 53·7 per 1000: the lowest rates being 31·8 in Kings Norton, 33·0 in Barrow in Furness, 37·5 in Leyton, 41·4 in Bournemouth and in Rotherham, and 41·5 in Handsworth (Staffs.); and the highest 68·2 in Bolton, 68·7 in Salford, 69·9 in

Derby, 73·3 in Stockport, 73·5 in Hanley, and 77·3 in Rochdale. In the 141 smaller towns the rate averaged 52·0 per 1000.

Compared with the mean rates in the ten preceding third quarters, the mortality of infants under one year of age showed a decrease of 19·3 per cent., that of persons between one year and sixty years of age a decrease of 15·4 per cent., and that of persons aged sixty years and upwards a decrease of 2·4 per cent.

Mortality from certain Epidemic Diseases.

The 120,792 deaths from all causes include—

15,733	that were attributed to		diarrhœa,
1,655	„	„	measles,
1,639	„	„	whooping-cough,
1,087	„	„	diphtheria,
786	„	„	scarlet fever,
773	„	„	"fever,"
4	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 21,677 deaths were referred during the quarter, being in the proportion of 2·52 annually in each 1000 living at all ages and of both sexes, or 0·80 per 1000 below the mean proportion in the third quarters of the preceeding ten years.

The rates of mortality last quarter from each of the above-mentioned diseases were below the respective averages.

Diarrhœa was the cause of 15,733 deaths during the quarter—a number corresponding to a rate of 1·83 per 1000 living, which is 0·45 below the average rate in the third quarters of the previous ten years. In counties with populations exceeding 100,000 persons the rates of mortality from diarrhœa ranged from 0·16 in Dorsetshire and 0·19 in Carmarthenshire, to 2·32 in London, 2·38 in the West Riding of Yorkshire, 2·52 in Durham, 2·73 in Essex, 2·95 in Lancashire, and 3·30 in the East Riding of Yorkshire. In the 76 great towns diarrhœa was fatal in the average proportion of 2·70 per 1000; among these towns the highest rates were 4·55 in Hull, 4·58 in Liverpool, 4·81 in Rhondda, 5·43 in Sheffield, 5·56 in Bootle, 5·57 in West Ham, 5·83 in Wigan, and 6·53 in Grimsby. In the 141 smaller towns diarrhœa caused an average mortality of 1·77 per 1000, and among them was most fatal in Ilkeston, Batley, Leigh (Lancs.), Barking Town, Farnworth, and Ince in Makerfield. In the remainder of England and Wales diarrhœa was fatal at the rate of 0·88 in each 1000 of the population. Among registration districts and sub-districts outside the 217 chief towns, diarrhœa was especially fatal in Ashton in Makerfield, Lowton, Atherton, Barmbrough, Cornforth, Winlaton, and Newburn. In accordance with precedent special tables relating to summer mortality from diarrhœa have been inserted in the present Return (*see* Tables XI.–XIII.).

Measles was the registered cause of 1,655 deaths last quarter, corresponding to an annual rate of 0·19 per 1000 living at all ages, which is lower by 0·09 than the decennial average rate for the third quarter of the year. Of the 55 Registration counties nine were free from measles fatality throughout the quarter; among the counties with populations exceeding 100,000 persons, the disease was most fatal in Nottinghamshire, where the rate was 0·34 per 1000, in Durham 0·35, in Warwickshire 0·36, in Monmouthshire 0·39, in Glamorganshire 0·52, in Cumberland 0·53, and in Denbighshire 0·99. In Buckinghamshire, Northamptonshire, and in the East Riding of Yorkshire the rate was as low as 0·02 per 1000. In the 76 great towns measles caused an average mortality of 0·21 per 1000. From 17 of these towns no deaths from measles were returned. Among the remaining great towns, the highest rates were 0·60 in Merthyr Tydfil, 0·73 in Wolverhampton, 0·77 in West Bromwich, 0·97 in Sunderland, and 2·59 in Barrow in

Furness. In the 141 smaller towns the death-rate from measles averaged 0·18 per 1000, the disease showing exceptional fatality in Mountain Ash, Oldbury, Cheltenham, Tipton, Pontypridd, and Workington. In the remainder of England and Wales measles caused an average death-rate of 0·17 per 1000. Among registration districts and sub-districts outside the 217 chief towns, this disease was especially fatal in Kilkhampton, High Littleton, Hucknall Torkard, Lowton, Southwick, Rock Bedwellty, and Festiniog.

Whooping-cough was returned as the cause of 1,639 deaths during the quarter, giving an annual rate of mortality equal to 0·19 per 1000 living, which is 0·07 below the decennial average rate for the third quarter of the year. In four of the 55 counties no deaths from whooping-cough were registered last quarter. Among counties with populations exceeding 100,000 persons, the rate was as low as 0·03 in Carmarthenshire, and did not exceed 0·05 per 1000 either in Worcestershire or in Cheshire. The mortality rose to 0·32 in Northamptonshire, 0·34 in Oxfordshire, 0·35 in Herefordshire, 0·36 in Essex, 0·38 in Cumberland, and 0·43 in Durham. Among the 76 great towns, the average mortality attributed to this disease was 0·22 per 1000. In 14 of these towns no deaths were attributed to whooping-cough during the quarter, but the mortality was equal to 0·45 in Walthamstow, 0·55 in South Shields, 0·60 in West Ham, 0·67 in West Hartlepool, and 0·77 in Grimsby. In the 141 smaller towns whooping-cough

NOTE:—The Registrar for Middleton Sub-district (469–5) erroneously reported 12 deaths from diphtheria, instead of 12 from diarrhœa. The error was discovered too late to make the necessary corrections in the letter-press and tables. *See* pages vii., xxiii., 55, &c.

22586

in the other great towns the rates rose to 0·30 in West Ham and in Halifax, 0·31 in Hanley, 0·34 in Portsmouth, and 0·40 in Barrow in Furness. In the 141 smaller towns diphtheria was fatal on the average to 0·13 in each 1000 of the population, and showed the greatest proportional fatality in Leigh (Lancs.), Nuneaton, Lincoln, Tipton, Barking Town, and Middleton. In the remainder of England and Wales, diphtheria caused an average mortality of 0·13 per 1000. Among registration districts and sub-districts outside the 217 chief towns, the mortality from this disease was excessive in Finchingfield, Somerton, Norton (Staffs.), Normanton, and Llandebie.

Scarlet fever was the stated cause of 786 deaths last quarter, giving an annual death-rate equal to 0·09 per 1000 living, which is lower by 0·03 than the decennial average rate for the third quarter of the year. Of the 55 registration counties in England and Wales not fewer than 11 were free from scarlet fever mortality throughout the quarter. The counties with populations exceeding 100,000 persons that showed the highest scarlet fever death rates were Cumberland where the rate was equal to 0·12 per 1000, Middlesex and Essex 0·13, the West Riding of York 0·14, and Lancashire 0·18. The average rate of mortality from this disease in the 76 great towns was 0·12 per 1000. From 19 of these towns no scarlet fever deaths were returned. Among the other towns the highest rates were 0·24 in Birkenhead, 0·29 in Salford, 0·40 in Liverpool, 0·66 in Blackburn, and 0·89 in Bootle. In the 141 smaller towns scarlet fever was fatal in the average proportion of

0·08 per 1000 living; it caused the greatest mortality in Widnes, Eccles, Dewsbury, Batley, Chadderton, and Morley. In the remainder of England and Wales the death-rate from this disease was 0·06 per 1000 living. Among registration districts and sub-districts outside the 217 chief towns, scarlet fever showed excessive fatality in Rothwell (Northampton).

"*Fever*" (including the principal forms—*typhus*, *enteric fever*, and "*pyrexia*" of uncertain origin) was the registered cause of 773 deaths last quarter. These deaths were equal to an annual death-rate of 0·09 per 1000, which is below the decennial average rate for the third quarter by 0·07 per 1000. There were 7 counties in which no deaths from "fever" were registered last quarter. Among counties with populations exceeding 100,000 persons, the highest "fever" death-rates were 0·21 in Durham, and 0·25 in Carmarthenshire. In the 76 great towns the average mortality from "fever" was equal to 0·08 per 1000 of the aggregate population. There were 16 of these towns that were free from "fever" mortality. In the remaining towns the highest rates from "fever" were 0·26 in Devonport, 0·28 in Ipswich, 0·29 in Middlesbrough and in South Shields, and 0·65 in Wigan. In the 141 smaller towns the average rate of mortality from "fever" was 0·11 per 1000; among these towns the disease showed the highest proportional fatality in Hyde, Hindley, Morley, Batley, Ebbw Vale, Farnworth, Gorton, Southend on Sea, and Widnes. In the remainder of England and Wales, "fever" caused an average death-rate of 0·09 per 1000 living. Among registration districts and sub-districts outside the 217 chief towns, "fever" was especially fatal in East Dereham, Ashbourne, Aston, and Pembrey.

Small-pox was fatal in 4 instances last quarter, as compared with 120, 134, 155, 73, and 32 respectively in the five quarters immediately preceding. The number of deaths registered last quarter from small-pox was smaller than in any quarter since the first quarter of 1899. The four deaths referred to occurred in one or other of the 217 chief towns.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,956 last quarter, and corresponded to an annual rate of 0·58 per 1000 of the population, against an average of 0·60 in the ten preceding third quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·34 in Middlesex, 0·35 in Cambridgeshire, 0·38 in Leicestershire, 0·39 in Carnarvonshire, 0·41 in Wiltshire and in Carmarthenshire, and 0·42 in Buckinghamshire; the highest rates were 0·65 in Cheshire, 0·67 in Shropshire, 0·70 in Oxfordshire, 0·76 in Northumberland, 0·79 in Monmouthshire, and 1·24 in Glamorganshire. In the 76 great towns the mean rate was 0·58 per 1000 living; among the several towns the rate was only 0·17 in Kings Norton, 0·21 in Leyton, 0·25 in Aston Manor, and 0·26 in Smethwick, in Handsworth (Staffs.), and in Northampton; but it rose to 0·89 in Sunderland, 0·90 in Wallasey, 0·92 in Stockton on Tees, 0·95 in West Bromwich, 1·03 in Merthyr Tydfil, and 4·81 in Rhondda.*

Certification of Causes of Death.

Of the 120,792 deaths registered in England and Wales last quarter, the causes of 110,727, or 91·7 per cent., were certified by registered medical practitioners, and the causes of 8,370, or 6·9 per cent., by coroners after inquest; whilst the causes of the remaining 1,695, or 1·4 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding third quarters having been 1·7 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Hampshire,

* The abnormally high death-rate from violence in Rhondda was due to a colliery explosion.

Middlesex, Wiltshire, Somersetshire, Gloucestershire, Cheshire, the East Riding of Yorkshire, and Glamorganshire, but it reached 2·9 in Durham, 3·2 in Berkshire, 3·3 in Carnarvonshire, and 3·5 in Herefordshire and in Derbyshire. In the 76 great towns the mean proportion of uncertified deaths was 0·9 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, West Ham, Southampton, Great Yarmouth, Devonport, Handsworth (Staffs.), Smethwick, Derby, West Hartlepool, and Merthyr Tydfil, the proportion per cent. rose to 3·1 in Kings Norton, 3·3 in Barrow in Furness, 3·4 in South Shields, 4·3 in Gateshead, and 4·5 in Blackburn.

Inquests.

Inquests were held in England and Wales concerning 8,370, or 6·9 per cent. of the total deaths, the mean proportion in the ten preceding third quarters having been 6·2 per cent. In the 76 great towns the proportion of inquest cases was 7·4 per cent., ranging from 2·9 in Smethwick, 3·3 in St. Helens and in Warrington, 3·5 in West Bromwich, and 3·6 in Northampton and in South Shields, to 10·1 in Portsmouth, 10·2 in Tottenham, 10·3 in Newport (Mon.), 11·5 in Devonport, 11·7 in Southampton, and 22·1 in Rhondda.*

Deaths in Public Institutions.

The total deaths registered in England and Wales include 20,631, or 17·1 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 13·6 per cent. In the 76 great towns the deaths in public institutions averaged 22·3 per cent. of the total deaths, the lowest percentages in the several towns being 1·1 in Rhondda, 3·8 in Barrow in Furness, 5·2 in Hornsey, 5·5 in Aston Manor, and 7·0 in Smethwick, and in Wigan ; and the highest 21·8 in Portsmouth, 22·0 in Halifax, 25·3 in Bristol, 27·4 in Liverpool, 27·9 in Brighton, and 37·2 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London that occurred in the London Fever Hospital, in the Metropolitan Asylums Board Hospitals, and in the Middlesex County Lunatic Asylum, within the County of London. The death-rate, thus computed, was equal to 14·6 annually per 1000 living (Table VI.). If, however, all the deaths of non-Londoners that occurred in hospitals or other public institutions in London be excluded, the death-rate will not exceed 14·1 per 1000. Table X. shows the death-rate in London after this further correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the Metropolitan Boroughs are also shown, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged.

Edinburgh, Glasgow, Dublin, and Belfast.

The annual death-rate per 1000 living last quarter was 14·5 in Edinburgh, 15·2 in Glasgow, 19·6 in Dublin, and 18·3 in Belfast, against 14·6 in London.

Colonial and Foreign Cities.

The Registrar-General has been favoured with weekly returns of vital statistics by the authorities of twenty-nine of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XIV.). Excluding the Indian Cities, the highest and lowest

---

* See note * on previous page.

annual birth and death-rates during the third quarter of 1905 were as follows :—

BIRTH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Trieste	31·3	Paris	18·0
Munich	30·8	Brussels	18·7
Breslau	29·5	St. Petersburg	19·5
Bucharest	29·2	Prague	20·8
Toronto	27·4	Antwerp	23·0
New York	27·0	Berlin	23·2
	London ... 26·8		

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Moscow	31·3	Amsterdam	12·2
Trieste	30·2	Stockholm	13·5
Breslau	28·0	Brussels	13·7
Venice	25·9	Antwerp	13·8
Bucharest	24·1	Chicago	13·8
New Orleans	23·0	Christiania	15·1
	London ... 14·6		

Small-pox caused 55 deaths in Paris, 35 in Rio de Janeiro, 26 in Moscow, 11 in St. Petersburg, 3 in Chicago, and 1 in New York.

Measles was most fatal in proportion to population in Trieste, St. Petersburg, Rio de Janeiro, Buda-Pesth, and Amsterdam ; *scarlet fever* in Moscow, St. Petersburg, Buda-Pesth, Stockholm, and Berlin ; *diphtheria* in St. Petersburg, Christiania, Moscow, Toronto, and New York ; *whooping-cough* in Christiania, Breslau, Moscow, Munich, St. Petersburg, Berlin, and Hamburg ; "*fever*" in New Orleans, St. Petersburg, and Venice ; and *diarrhœal diseases* in Moscow, Breslau, Trieste, Bucharest, Berlin, and Venice.

Infantile Mortality.—Among those towns for which the figures are available, the proportion of deaths among children under one year of age to 1000 registered births ranged from 107 in Stockholm, 126 in Amsterdam, 129 in Christiania, and 141 in Paris, to 334 in Trieste, 353 in Berlin, and 447 in Breslau.

INDIAN CITIES.—The death-rate was equal to 90·6 per 1000 in Madras, 35·2 in Bombay, and 23·3 in Calcutta. *Small-pox* caused 119 deaths in Madras, 23 in Calcutta, and 19 in Bombay ; *measles* caused 93 deaths in Madras, 52 in Bombay, and 11 in Calcutta. Under the heading "*fever*" 1,700 deaths were classed in Madras, 1,608 in Calcutta, and 1,157 in Bombay, including respectively, one, 144, and 585 deaths from *plague*. The mortality from *diarrhœal diseases* was excessive in Madras ; *Asiatic cholera* caused 3,120 deaths in Madras, 289 in Calcutta, and 14 in Bombay.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the third quarter of the year 1905 (*see* pages xxv–xxx).

TABLE V.—**76 Great Towns.—Population; Births, Deaths,** and **Meteorology** in the 13 Weeks ended **30th September, 1905.**

NOTE.—The 76 Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TOWNS.	ESTIMATED POPULATION in the middle of 1905.	BIRTHS.	DEATHS.	The DEATHS registered include: Deaths of: Infants under 1 Year of Age.	Deaths of: Persons aged 60 Years and upwards.	Deaths from: Principal Epidemic Diseases.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Violence.	Inquest Cases.	Deaths in Public Institutions. Table VI.—**76 Great Towns.—Birth-rate, Death-rate,** and **Analysis** of **Mortality** in the 13 Weeks ended **30th September, 1905.**

NOTE.—The 76 Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TABLE VII.—**One hundred and forty-one smaller Towns.—Population; Births and Deaths in the QUARTER ended 30th September, 1905.**

NOTE—The 141 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 persons at the Census of 1901. They are arranged alphabetically under the Registration Counties in which they are situated. The Registrars alone must be considered responsible for the accuracy of the figures upon which these Returns are based.

TOWNS.	ESTIMATED POPULATION IN THE MIDDLE OF 1905.	BIRTHS.	DEATHS.	The DEATHS registered in the Quarter include												Deaths under 1 year to 1000 Births.	TOWNS.
				Deaths of		DEATHS from

In this Table 0·00 indicates that the deaths were too few to give a rate of 0·005 : where *no death* occurred,– is inserted.
Note.—The rates for the County of London do not in all cases agree with those in Table vi., page xvii. ; for explanation, see page ix.
* Formerly described as "Simple Continued Fever."

The *Registration Districts*, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[a] See page 2, note [b].

[b] For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—Registration Districts.

No.	Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages: Registered in Quarter ended 30 June 1905.	Births: Registered in Quarter ended 30 Sept. 1905. [a] The *Registration Sub-districts* (2044 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

[b] See page 2, note [b].

[a] 618 : 1.—Of the 3 deaths from diphtheria, which were registered during September, 2 belonged to the parish of Holt.
[b] 625 : 2.—The 14 deaths from measles belonged to Festiniog Urban District.
[c] 627 : 2.—Of the 7 deaths from measles, 6 occurred in the parish of Llanddeiniolen.
[d] 629 : 2.—The 5 deaths from whooping-cough occurred in Llandudno Urban District.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 30TH SEPTEMBER, 1905.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE QUARTER ENDED SEPTEMBER 30TH, 1905.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 152 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JULY, 1905.

General Summary.—The atmospheric conditions experienced during the month of July were of a character appropriate to the season. The weather was much more changeable in the far western and northern districts than it was in the southern and eastern ones, rain being frequent in the former regions, and comparatively rare in the latter, but in all districts the precipitation was, with a few local exceptions, usually in the form of light passing showers. Thunderstorms occurred at various times during the month, but as a rule they presented no exceptional features, being rather of a moderate than a violent type. Two at New Barnet on the afternoon of the 9th were attended by heavy rain and hail (2·4 ins.), causing much damage to fruit and vegetables. There were numerous occasions, especially from the 10th onward, on which thick wet fog or mist was reported on many sections of our coasts, more particularly along the south and west of England. Although disturbances were fairly frequent they were generally of a very quiet, summer type, so that they were accompanied by winds of no great strength. As an indication of the unusual quietness of the season it may be stated that during the three consecutive months, May, June and July, no storm warning was issued, nor was a general gale (of force 8 at least) felt on any section of the coasts of the British Isles, a combination which had not previously occurred for 35 years, there having been neither warnings nor general gales in the three months June to August, 1870. Taking the month under review as a whole pressure and temperature were both in excess of the normal; the winds were for the most part Southerly to Westerly, light or moderate in force; rainfall was nearly everywhere deficient; and except at some south-western stations there was an excess of bright sunshine.

Pressure.—*Mean at* 8 *a.m.* ranged from 30·12 ins. at Jersey and above 30 ins. over the southern half of the kingdom to below 29·9 ins. in the extreme north of Scotland and to 29·86 ins. at Sumburgh Head. The values were in every instance above the average, the excess being least, 0·05 in. at Sumburgh Head and Wick, and greatest, 0·12 in. at Liverpool and Roche's Point. The distribution of mean pressure did not differ to any material extent from the normal. *Highest* readings were recorded on the 4th, 30·35 ins. at Roche's Point, on the 13th and 14th, 30·30 ins. at Jersey, and on the 19th, 30·29 ins. at Oxford. *Lowest* readings occurred on the 29th and 30th, when Wick went down to 29·35 ins. The rest of the month had few values below 29·8 ins. *Range* was everywhere small, from somewhat less than 0·5 in. at the southern English stations to about 0·8 in. in the north of Scotland.

Depressions.—A shallow disturbance which appeared on the English Channel at the close of the preceding month, subsequently followed an irregular path northward across Britain, and eventually passed on to Northern Scandinavia and Russia. On the 22nd another moved

eastward across Scotland, and on the next day it died out near Denmark. The other disturbances of the month were either on the Continent or travelling on a north-easterly course outside our north-western and northern coasts. They were of no great depth, nor were they possessed of much energy.

Anticyclones.—The Daily Weather Maps exhibit a very well marked persistency of anticyclonic conditions over the Bay of Biscay region, the central space of the system shifting about between the south of Ireland and the north of Spain throughout nearly the whole month. Occasionally the system threw off smaller secondary areas which moved eastward to Central Europe, and at times, as on the 8th, it expanded so as to embrace the whole of our islands. Our southern districts were nearly always under its influence.

Winds.—The type of pressure distribution favoured a great prevalence of winds from between South and West or North-West, but in the absence of steep gradients the air movement was usually weak. The force of a gale (force 7 and upwards) was attained at Malin Head on four days, and at Deerness, Cockle Park, Woburn, Laudale, Holyhead and Bettws-y-Coed on one day.

Temperature.—*Mean at sea level* ranged from slightly above 67° in the Thames Valley, and above 65° over the greater portion of the south-eastern quarter of England, to below 60° in the north of Ireland and the west and north of Scotland, 54° in the Shetlands. The general distribution was in fair agreement with the normal, but the values were in all cases above the average, the excess being more than 4° at Killarney, Southampton, Geldeston, Yarmouth and Felixstowe, and as much as 5°·3 at Shoeburyness. Both the maximum and the minimum temperatures occurred on very varied dates. *Highest* readings were above 80° at a large number of stations, 87° at Maidenhead on the 26th, and 86° at Bawtry and Epsom on the 14th. *Lowest* values 38° at Wokingham (7th), Fort Augustus (19th), Cally (28th), and Braemar (29th), 37° at Crathes (28th), and 36° at Garforth (4th). *Range* varied from 45° at Wokingham, 44° at Bawtry and Garforth, and above 40° at a few other stations to 20° at Deerness and Pembroke, 19° at Blacksod Point, 18° at Scilly, and 15° at Sumburgh Head. *Vapour Pressure* ranged from 0·48 in. at Jersey and in London, and 0·47 in. at Dungeness, to below 0·40 in. over Scotland, 0·37 in. at Sumburgh Head. *Relative Humidity* ranged from 90 per cent. at Pembroke and 89 per cent. at Sumburgh Head to 75 per cent. at Aberdeen and Bath, and 73 per cent. at Leith.

Rainfall.—With the exception of a few isolated stations the rainfall throughout the country was below the average, largely so in many localities, a number of places returning a deficiency of 2 ins. and upwards, 2·4 ins. at Cullompton, and 2·5 ins. at Shaftesbury. There were not many instances of aggregate totals of as much as 3 ins., but Glencarron had 6 ins. and Laudale 6·5 ins. On the other hand, there were numbers of stations in the southern counties of England which received less than 0·5 in., Clacton and Shoeburyness returning 0·22 in., Felixstowe 0·20 in., and Oxford 0·17 in. The number of days on which rain was measured ranged from 26 at Lairg, and 25 at Sumburgh Head, Stornoway, and Laudale, to 5 or 4 in various parts of England, and 3 at Felixstowe. The only falls of more than an inch in a day occurred on the 9th, Laudale 1·7 in., and Liverpool 1·5 in., while Barnet had 2·4 ins.

Bright Sunshine.—The sunshine records at Scilly show a loss of 38 hours, and there was a small deficiency over the south of Ireland, the Isle of Man, Pembrokeshire, Cornwall and Guernsey, the duration in all other localities being above the average, an excess of 52 hours at Cambridge, 53 at Rothamsted, 62 at Blackpool, and 69 at York. The percentage of possible duration ranged from 58 at Lowestoft, 56 at Cromer, and above 50 at several other stations, to 28 at Birr Castle, Valencia, and Markree Castle, and 21 at Fort Augustus.

AUGUST, 1905.

General Summary.—Unlike the preceding three months, August proved a very unsettled period nearly throughout. The disturbances which reached our shores were rather numerous for the time of year, but as a rule they were of no great intensity, resulting more in wet weather than in wind storms. The accompanying rain was both frequent and heavy, large falls in 24 hours being commonly experienced, and over the eastern parts of Ireland there were rainstorms of exceptional severity about the 25th, when the amounts registered in the Dublin district were between 3 ins. and 4½ ins., which brought about a destructive flood at Bray. The north-western portion of England also received considerable quantities of rain at the same time. It is of interest to note that this remarkable rainstorm, like many others of a similar character, occurred during the prevalence of an Easterly wind in front of a cyclonic system of moderate depth which moved slowly northward from Land's End up St. George's Channel. Thunderstorms were numerous and visited nearly all districts; in some instances

these were very severe and were accompanied by heavy local rains. For the month as a whole pressure showed a moderate deficiency; temperature was nearly everywhere under the normal; the winds varied greatly in direction; rainfall was in excess in most localities; and bright sunshine was in defect very generally.

Pressure.—*Mean at* 8 *a.m.* ranged from 29·95 ins. at Jersey and above 29·85 ins. over the more southern parts of England and Ireland to below 29·76 ins. in the extreme north-east of Scotland, and to 29·74 ins. at Sumburgh Head. The values were in every instance below the average; but the deficiency was not large in any locality, from 0·03 in. at Stornoway to about 0·08 in. at some of the southern stations. The distribution of mean pressure did not differ from the normal to any material extent, except in the far north and west, where it was more of a North-Westerly than a South-Westerly type. *Highest* readings were registered on the 12th, 30·3 ins. and upwards in the south of England, 30·36 ins. at Jersey, and on the 31st, 30·4 ins. and upwards in the western districts, 30·46 ins. at Pembroke, and 30·48 ins. at Valencia. *Lowest* readings occurred on the 3rd and 4th, 29·00 ins. at Valencia, and nearly as low at many other western stations; on the 18th and 19th, below 29·2 ins. in the north of Scotland, 29·08 ins. at Sumburgh Head; and on the 28th and 29th, 29·20 ins. at Yarmouth. *Range* was moderate, from slightly less than an inch at some of the eastern and southern stations to 1·4 in. at Pembroke and Roche's Point and 1·5 in. at Valencia.

Depressions.—A few of the disturbances of the month passed on a north-easterly course outside these islands, but the great majority came ashore on various parts of our south-western coasts, and travelled eastwards or north-eastwards across the country. The deepest of the series made its appearance off the south-west of Ireland on the 2nd, subsequently skirting the south coast, and on the morning of the 4th, suddenly changing its course, it passed up the east of Ireland and finally reached northern Scandinavia. Another deep one crossed the Hebrides in the night of the 18th. The depression which reached southern Ireland on the evening of the 27th, and afterwards crossed our Midland Counties on its way to the Baltic and North Russia became gradually deeper as it advanced.

Anticyclones.—For the most part the regions of high pressure were situated over the south-western, western or eastern portions of the Continent, but one which appeared on the Portuguese coast on the 10th moved northward, and from the 12th to the 16th it embraced our Islands. The maximum pressure was attained on the 31st, in an anticyclone the central space of which moved down our western districts for the Bay of Biscay.

Winds.—The frequent disturbances moving across the country produced winds from all quarters of the compass, but the general results for the month show the prevailing directions to have been North-Easterly to North-Westerly and Westerly in the north, and Westerly to South-Westerly in the south. On our western and southern coasts the wind often blew with great strength, the force of a gale being attained at Portland and Jersey on 9 days, at Pembroke and Laudale on 7 days, and at Holyhead and Spurn Head on 5 days.

Temperature.—*Mean at sea level* ranged from 63° at Jersey and above 60° over the extreme south and south-east of England to below 56° in the north of Scotland, and to below 54° at Sumburgh Head. The general distribution differed somewhat from the normal, notably in the transfer of the warm area from our inland counties to the Thames Estuary. In nearly every instance the mean values were below the average, the deficiency being more than 2° at several stations, and nearly 4° at Llangammarch Wells. The maximum and the minimum values were recorded on very varied dates, the former mainly round the 15th, the latter round the 24th. *Highest* readings were 81° at Oundle and 80° at Brighton on the 15th, 79° at Maidenhead on the 14th, and 78° at Bawtry on the 15th. *Lowest* were 35° at Llangammarch Wells (24th) and Garforth (17th), 36° at Wokingham (24th), and 37° at Marlborough, Swarraton, Nairn (24th), and Cally (31st). *Range* was nowhere very large, 39° at Maidenhead and Oundle, and 38° at Bawtry, Marlborough and Swarraton, 20° or less at several coast stations, 16° at Pembroke, Guernsey and Sumburgh Head, and 15° at Deerness and Scilly. *Vapour Pressure* ranged from 0·43 in. or 0·44 in. at the extreme southern stations to 0·35 in. in the north-east of Scotland. *Relative Humidity* was as high as 93 per cent. at Spurn Head and 91 per cent. at Stornoway, against 77 per cent. at Yarmouth and 76 per cent. at Leith.

Rainfall.—At three-fourths of the stations in Great Britain and at nearly every station in Ireland the rainfall was above the average, the excess at some western stations being between 2 ins. and 4 ins. Many places, chiefly in the west, had aggregates exceeding 5 ins., ranging up to 8 ins. at Glencarron, and 8·6 ins. at Newcastle (Wicklow). There were many records of more than an inch of rain in a day, the largest falls occurring in the eastern parts of Ireland on the 25th, when there were several instances of more than 3 ins., Newcastle (Wicklow) registering 4·1 ins. and Bray, Fassaroe (not included in the tables) 4·5 ins. The days with rain numbered 28 at Stornoway and 26 at Lairg and Valencia, ranging down to 13 or 14 at various stations in the east of England, and 12 at Broadstairs.

Bright Sunshine.—With only a few exceptions the records of bright sunshine were less than the average, the deficiency as a rule, not being large, but Dublin (Phœnix Park) returned a loss of 38 hours, and Cullompton of 50 hours. The percentage of possible duration ranged from 51 at Jersey and Guernsey, and 49 at Scilly and Littlestone-on-Sea, to 21 at Strathpeffer and 16 at Fort Augustus.

SEPTEMBER, 1905.

General Summary.—Though the period under review was occasionally of a very unsettled character, the disturbances which reached our shores were, as a rule, of no great intensity, and the few gales they brought were comparatively unimportant. In the first and last weeks the weather generally was very dull with frequent rains, which in some localities were heavy. In various parts of England thunderstorms were experienced at times. There was a marked absence of any very warm days in every part of the country, but the nights were usually of moderate mildness, and only at a few of the more open situations was there a slight frost registered. An earthquake shock was felt in the neighbourhood of Stirling on the 21st. For the month as a whole pressure did not differ much from the normal, being slightly deficient over the east of England; the winds were mainly North-Westerly to Northerly and Easterly along the English Channel, and South-Westerly to North-Westerly elsewhere; temperature and rainfall were nearly everywhere in defect; and bright sunshine was in excess generally over North Britain, and in defect elsewhere.

Pressure.—*Mean at 8 a.m.* ranged from 30·00 ins. at Roche's Point, and above 29·95 ins. over the greater part of England and Ireland to below 29·85 ins. in the north of Scotland and to 29·80 ins. at Sumburgh Head. The values were slightly below the average over the eastern and south-eastern counties of England, but the excess over the rest of the kingdom was not large, nowhere amounting to as much as 0·05 in. (0·045 in. at Blacksod Point). The distribution of mean pressure was in fair agreement with the normal, except that the highest values were on the south-western coasts instead of over the north of France. *Highest* readings were recorded on the 1st, 30·38 ins. at Valencia; 14th to 17th, 30·15 ins. at Valencia; 21st, 30·35 ins. at Sumburgh Head; and 29th, 30·30 ins. at Stornoway. *Lowest* occurred on the 7th, 28·91 ins. at Stornoway, 28·95 ins. at Malin Head, and 28·96 ins. at Blacksod Point; on the 3rd, 29·35 ins. at Wick; and on the 27th, 29·47 ins. at Scilly. *Range* was greatest over the north of Ireland, 1·5 in., and least on the south coast of England, 0·75 in.

Depressions.—The principal disturbances of the month had their central spaces outside our islands, some travelling on a north-easterly course beyond the northern coasts, others following curved paths off the south-western coasts and round the north of France. That of the 7th, to the north-westward, was a very deep one, the barometer sinking below 29 ins., but the others were much shallower. There were several instances of small secondary irregularities moving across the country.

Anticyclones.—For some days round the middle of the month the whole country was covered by a well-marked system of high pressure, in which the barometer rose above 30·4 ins. During the rest of the period our islands were only partially affected by anticyclones whose central spaces were at considerable distances to the south-westward, north-westward, or north-eastward.

Winds.—The prevailing winds were in close agreement with the general distribution of mean pressure; South-Westerly to North-Westerly over the western and northern districts, North-Westerly to Northerly and Easterly in the south and south-east of England. Gale force was attained on 6 days at Jersey, and on 5 days at Portland Bill and Malin Head.

Temperature.—*Mean at sea level* ranged from nearly 59° in the Channel Islands and at Margate, and above 56° over the extreme south and east of England, to below 53° over nearly the whole of the north of Scotland, and to 51°·2 at Sumburgh Head. The general distribution did not differ materially from the normal, but the mean values were, with a few unimportant exceptions on the east coast of England and in Scotland, below the average, the deficiency being more than a degree in most places, and amounting to 3° at Wisley, 3°·1 at Llangammarch Wells, and 4°·2 at Bettws-y-Coed. *Highest* values were registered in the first week, in numerous instances on the 3rd or 4th, when 76° was reached at Whitby and Maidenhead, and 75° or 74° at several other English stations, 71° at Kingstown, and 70° at Kilkenny Castle and Aberdeen. *Lowest* readings occurred on very varied dates, principally about the 15th in England, the 21st in Scotland, and the 26th in Ireland. At Garforth the minimum was 28°, at Llangammarch Wells, Wokingham, and Crathes 29°, and at Bawtry and Braemar 30°. *Range* was as large as 44° at Wokingham, 41° at Alnwick Castle, and 40° at Epsom, Hereford, and

Oundle, against 19° at Sumburgh Head, Deerness, Spurn Head, Portland Bill, and Malin Head, and 15° at Scilly. *Vapour Pressure* ranged from 0·41 in. at Jersey and 0·39 in. at Dungeness to 0·32 in. at Wick and 0·31 in. at Nairn and Sumburgh Head. *Relative Humidity* ranged from 90 per cent. at Birr Castle and 89 per cent. at Malin Head to 82 per cent. at Shields. Nairn, and Wick and 77 per cent. at Leith.

Rainfall.—At nearly every station the rainfall was below the average, the deficiency amounting to 2 ins. at Clifton, 2·5 ins. at Roche's Point, and 2·7 ins. at Falmouth. At Fulbeck, however, there was an excess of an inch, at Laudale of 1·9 in., and at Glencarron of 3·4 ins. The largest aggregate totals for the month were 11·1 ins. at Glencarron, 9 ins. at Laudale, and 5·1 ins. at Stornoway. Falls of an inch or more in a day were not numerous, 1·0 in. to 1·5 in. at various north-western stations between the 6th and 9th, 1·3 in. at Valencia on the 21st, and 1·0 in. to 1·8 in. in the eastern counties of England between the 24th and 26th. The number of days with rain ranged from 26 at Blacksod Point and Glencarron and 24 at Stornoway and Lairg to 9 at Shrewsbury, Bath, Buntingford, Oundle, and Kingstown, and 8 in the Forest of Dean.

Bright Sunshine :—In most parts of Scotland the duration of bright sunshine was above the average by 27 hours at Deerness and 23 hours at Stornoway. Over England and Ireland the records showed a deficiency, which was very considerable in places, a loss of 63 hours being reported at Jersey, 53 hours at Eastbourne, 52 hours at Ventnor, and 50 hours at Brighton. The percentage of possible duration ranged from 45 at Skegness and 44 at Scilly to 24 at Newcastle and Fort Augustus and 21 at Birmingham.

Minimum Temperature on Grass.

In July, 1905, the grass minimum did not fall as low as 30° in any district, the lowest reported being 33°·8 at Bath on the 7th.

In district 3 (England, S.) the lowest reading was 40°·0 at Salisbury, while in district 8 (English Channel) the minimum was 45°·2, these readings being in both cases recorded on the 7th.

During August there was again no frost on the grass reported, the lowest reading of the terrestrial radiation thermometer being 32°·5 at Bath on the 24th.

In all the districts except No. 8, however, the grass temperature fell below 37°, the lowest readings reported in the several districts being respectively 33°·0 at Barnet ; 34°·3 at Stokesay ; 36°·9 at Southampton ; 34°·6 at Cambridge ; 35°·8 at Cockle Park, Morpeth ; 34°·8 at Carlisle ; 32°·5 at Bath, and 42°·9 at Guernsey.

During September the temperature on the grass fell below 30° in all districts, except 3 (England S.), 4 (England E.), and 8 (Channel Islands).

The lowest readings reported in the several districts were :—29°·2 at Kew ; 27°·0 at Birmingham ; 32·4 at Southampton ; 32°·0 at Dunmow ; 27·8 at Cockle Park, near Morpeth ; 27°·5 at Carlisle ; 26°·0 at Bath ; and 41°·0 at Guernsey. The number of days on which temperature of 30° or less were recorded in September was 7, namely, the 12th, 14th to 17th, 21st and 27th.

In no one district did the number of such days exceed 5, and that number was only reached in one, viz., No. 7 (England, S.W.). The 15th was the day on which low grass minima were most generally observed, readings of 30° or less being reported on that day in districts 1, 2, 5, and 7.

Maximum Temperature in Sun.

The maximum in the sun is observed in most cases by means of a thermometer with blackened bulb, exposed *in vacuo*, at a height of 4 feet above the ground. From the various stations the highest maxima reported during July, 1905, ranged from 155°·7 at the Royal Observatory, Greenwich, and 144°·0 at Dunmow and Morpeth to 123°·5 at Manchester.

Although 155°·7 was registered at Greenwich on the 27th, the highest reported at Barnet on the same day was only 87°·0.

The highest readings reported in the several districts were 155°·7 at Greenwich; 140°·2 at Shrewsbury; 140°·0 at Portsmouth; 144°·0 at Dunmow; 144°·0 at Cockle Park, Morpeth; 137°·0 at Llandudno; 141°·0 at Bath; and 138°·2 at Guernsey.

During August the highest maxima in the sun was observed at Dunmow, where 149°·0 was recorded on the 1st, which was 9° higher than the maximum at the Royal Observatory, Greenwich, on the same day. The maximum for the month at Greenwich was 145°·8 on the 2nd.

At two stations the maximum in sun did not reach 120°·0, viz., at Manchester, where the maximum was 119°·6, and at Barnet where it did not exceed 115°·5.

In each district maxima of 130° or upwards were recorded.

During September the highest temperature in the sun reported was 137°·6 at Dunmow on the 19th, the next highest being 130°·0 at Shrewsbury, Stokesay, and Bath on the 4th.

At Carlisle the maximum in sun did not rise above 105°·8.

In each district, however, maxima of 124°·0 and upwards were recorded.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of W. N. Shaw, Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

List of Stations and Observers.

Station.	Observer.	Station.	Observer.
1. London:—		3. England, S.:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Camden Square	H. Robert Mill, D.Sc., LL.D.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Westminster ..	The Meteorological Office.	Portland Bill ..	The Meteorological Office.
Brixton ..	The Meteorological Office.	Eastbourne ..	R. Sheward, for the Corporation.
Norwood ..	W. Marriott.	Salisbury ..	Thos. Challis, for the Earl of Pembroke.
2. England, Central:—		Canterbury ..	A. Lander.
Sheffield ..	E. Howarth. The Weston Park Museum.	4. England, E.:—	
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	Lowestoft ..	C. W. Edwards, for the Corporation.
Wakefield ..	A. Clyde.	Clacton-on-Sea	A. W. Shadick, for the Urban District Council.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Dunmow ..	Thos. Hacking. The Countess of Warwick's Agricultural School.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Cambridge ..	R. Irwin Lynch. The Botanic Gardens.
Buxton	W. Pilkington.	Norwich .. (Brundall.)	A. W. Preston.
Cheltenham ..	A. C. Saxby, for the Corporation.	Bennington ..	Rev. J. D. Parker, LL.D.
Oxford	The Radcliffe Observatory.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Stokesay ..	Rev. W. La Touche, B.A.		
Berkhamsted	E. Mawley.		
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.		

Station.	Observer.	Station.	Observer.
5. ENGLAND, N.E.:—		7. ENGLAND, S.W., WITH SOUTH WALES :—	
North Shields	The Meteorological Office.		
Spurn Head ..	The Meteorological Office.	Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.

York	Oxley Grabham, for Yorkshire Phil. Soc.	St. Ann's Head, Pembroke.	The Meteorological Office.
Hull	H. B. Witty, for the Corporation.	Bristol .. .. (Clifton.)	D. Rintoul, M.A. Clifton College.
Cockle Park .. (*near Morpeth*).	A. G. Birt, for the Northumberland County Council.	Falmouth ..	The Meteorological Office.
		Barnstaple ..	Thos. Wainwright. The North Devon Athenæum.
Tealby	Rev. S. Lewin, B.A.	Bath	W. H. Symons, M.D., M.O.H., for the Corporation.
		Llangammarch Wells.	W. Black Jones, M.D.
6. ENGLAND, N.W., WITH NORTH WALES :—			
Llandudno ..	W. Little, for the Town Council.		
Liverpool .. (Bidston.)	W. E. Plummer. Bidston Observatory.		
Aspatria ..	J. Smith Hill, B.Sc. The Agricultural College.		
		8. THE CHANNEL :—	
Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.		
		Scilly	The Meteorological Office.
Carlisle.. ..	Studholme Cartmell, for the Corporation.	Jersey	The Meteorological Office.
Stonyhurst ..	Rev. W. Sidgreaves, S J. The Observatory.	Guernsey ..	Adolphus Collenette.

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than ·2, and as an "overcast" day if the average is greater than ·8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are :—Clear sky, 0, 0, 0 ; and Overcast, 0, 0, 2.

Oxford :—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows : Rain, 86 years, 1815–1900 ; Temperature, 73 years, 1828–1900 ; Sunshine, 20 years, 1881–1900.

Name of Station, County and Height. [The figures give the height of the Cistern of the Barometer above Mean Sea Level.]	1905.	Barometer. Mean Pressure, at 32° F. at Station Level.*	Air Temperature. * The hours of Observation are 9 a.m. and 9 p.m., local time, with the following exceptions. At the stations marked :—

For all the stations marked *a*. *b*. and *c*. the results under Barometer, Hygrometer and Cloud are based on the morni for districts. For the station marked *c*, and for Camden Square, where the wind is not observed at 9 p.m., the results f them more readily comparable with the results for other stations. They, as well as the number of days of "Clear Sky

† The averages used are obtained from observations extending over 35 years, namely :—For Rainfall, 35 years, 1866–190 Sunshine, 15 years.)

‡ At the Royal Observatory the earth temperature is taken at 3 feet 2 inches below the surface ; at this station t numbers for the 3rd Quarter as thus calculated, are respectively Clear Sky 0, 0, 0, and Overcast 0, 0, 2. *See* Note on page 79.

Wind Force.—Beaufort Scale (0-12) is used. The number of observations of moderate and strong wind (force 4–

(a St. Ann's Head, Bath, Scilly and Jersey) the observing hours are 8 a.m. and 6 p.m. Greenwich time.
(b Barnstaple) the observing hours are 9 a.m. and 3 p.m. local time.
(c Llangammarch Wells) the observing hour is 9 a.m. local time.
* Observations only, and these results are in consequence printed in French type. They have not been included in the means
† Values have been multiplied by 2 in order to make them more readily comparable with the results for other stations.
‡ Not included in the means for districts.
Temperature, 30 years, 1871–1900; Sunshine, 20 years, 1881–1900.
The number of observations of calm and the number of days of gale are given in the table.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number** of each REGISTRATION DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberayron, 604.
Abergavenny, 582.
Aberystwith, 605.
Abingdon, 115.
Alcester, 397.

INDEX OF URBAN DISTRICTS

As constituted on 30th September 1905, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,163 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 149 were each co-extensive, at the end of September 1905, with one or more Registration Areas.

AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 228.] **Marriages**—*July, August, September*, 1905.
Births and **Deaths**—*October, November, December*, 1905. [Price 9*d.*

General Register Office, Somerset House,
26th January, 1906.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1905 is estimated at 43,219,788 persons; that of England and Wales at 34,152,977, that of Scotland at 4,676,603, and that of Ireland at 4,390,208.

In the United Kingdom 274,595 *births* and 164,006 *deaths* were registered in the three months ended 31st December 1905. The natural increase of population was, therefore, 110,589. The number of *persons married* in the quarter ended 30th September 1905 was 172,046.

The birth-rate in the United Kingdom in the *fourth* quarter of 1905 was 25·2, and the death-rate 15·1, per 1000 of the estimated population. The marriage-rate in the *third* quarter of 1905 was 15·8 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

According to the returns issued by the Board of Trade, it appears that 86,642 emigrants embarked, last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 2,922 emigrants whose nationality was not

2875 Wt 90 2/06 D & S 3 23285

ascertained, the emigrants that were natives of the United Kingdom numbered 52,024, of whom 36,816 were English, 7,093 Scottish, and 8,115 Irish, whilst 34,618 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 1,078; Scotland, 1,517; and Ireland, 1,848. Compared with the averages in the three preceding fourth quarters, the proportion of English emigrants showed a decrease of 5·3 per cent., that of Scottish emigrants a decrease of 4·0 per cent., and that of Irish emigrants a decrease of 15·8 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,039 registration sub-districts of England and Wales during the three months ended 31st December 1905; and the MARRIAGES in 15,570 churches or chapels, in 14,307 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, during the three months ended 30th September 1905.

Marriages.

During the *third* quarter of 1905 the marriages of 145,452 persons were registered, being equal to an annual rate of 16·9 persons married per 1000 of the estimated population, against an average rate of 17·0 per 1000 in the third quarters of the ten years 1895–1904.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 11·7 in Denbighshire, 12·4 in Carnarvonshire, 12·6 in Suffolk, 13·1 in Dorsetshire, and 13·4 in Herefordshire; the highest rates were 17·4 in Glamorganshire, 17·6 in Middlesex, 17·7 in Warwickshire, 19·0 in Lancashire, and 19·9 in London.

Births.

The births registered in the *fourth* quarter of 1905 numbered 219,385, and were in the proportion of 25·5 annually per 1000 of the population; this is the lowest birth-rate recorded in any fourth quarter since civil registration was established. The mean rate in the ten preceding fourth quarters was 28·0. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 19·6 in Sussex, 20·1 in Carnarvonshire, 20·7 in Cornwall, 21·0 in Northamptonshire, 21·6 in Oxfordshire, and 21·7 in Bedfordshire; the highest rates were 28·2 in Carmarthenshire, 28·6 in Staffordshire, 30·0 in Northumberland, 31·6 in Durham and in Glamorganshire, and 32·2 in Monmouthshire.

In 76 great towns the birth-rate averaged 26·6 per 1000, ranging from 14·7 in Bournemouth, 15·7 in Hastings, 16·8 in Halifax, and 17·7 in Hornsey, to 32·2 in Gateshead, 32·7 in Sunderland, 34·1 in St. Helens, 34·3 in Rhondda, and 35·5 in Merthyr Tydfil. In 141 smaller towns the mean birth-rate was 25·3 per 1000, whilst in the remainder of England and Wales, excluding these 217 towns, it was 24·4.

Natural Increase of Population.

The natural increase of population in England and Wales during the quarter by excess of births over deaths was 91,639, against 93,274, 94,180, and 90,008 in the fourth quarters of 1902, 1903, and 1904 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 30*s.* 6*d.*, 30*s.* 11*d.*, and 29*s.* 5*d.* respectively in the preceding three quarters, was 27*s.* 11*d.* last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, $4\frac{3}{8}d.$; of prime beef, $6\frac{7}{8}d.$; of inferior mutton, $5\frac{7}{8}d.$; of prime mutton, $8\frac{6}{8}d.$ Compared with the average prices in the preceding three months, the mean price of inferior and of prime beef showed respectively a fall of $\frac{1}{8}d.$ The mean price of inferior mutton showed a fall of $\frac{1}{8}d.$, while that of prime mutton remained unchanged. There were no quotations of sea-borne coal in the London Market last quarter. The mean price of Consols was 88*l.* 17*s.* 0*d.*, having been 90*l.* 3*s.* 4*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England during the quarter was 4*l.*, having continued at that figure since 28th September 1905.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 791,392; of whom 253,742 received in-door, and 537,650 out-door, relief. The proportion of the population in receipt of poor-law relief was 23·2 per 1000, against 21·7 and 23·2 per 1000 respectively in the fourth quarters of 1903 and 1904.

Meteorology.

A detailed report on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, prepared in the Meteorological Office, will be found on pp. 72–89.

Regarded as a whole, the weather of the quarter was of a somewhat changeable character, cool and dry at first, then colder and less settled, with heavy rains early in November; and, finally, mild, with a long spell of very dry weather in the middle portion of December.

October proved an unusually quiet month, the gales experienced being few in number, and of no great severity. In the earlier half of the period the weather was mostly cloudy, but dry, the wind being chiefly from north or north-west, and temperature consequently rather low. In the third week, when anticyclonic airs prevailed, sharp night frosts were experienced over nearly the whole country; in several portions of the midland and southern counties the sheltered thermometer at some time during the week fell at least 12 degrees below the freezing point, still lower readings being registered on the surface of the ground. Towards the close of the month cyclonic disturbances advancing from the Atlantic brought stronger winds from varying directions, and less settled weather, heavy rain occurring over the south of England on the 30th or 31st, and thunder and lightning at about the same time in many parts of the country.

In November the flow of cyclonic areas from the ocean became more persistent, the month being, upon the whole, extremely changeable, with repeated heavy rains in the earlier portion. After a slight gale from the eastward on the 12th and 13th the wind moderated and blew mainly from some northerly point, with a rather decided fall of temperature. Sharp night frosts occurred between the 16th and 21st, and snow or sleet showers fell about the same time in several districts. On the evening of the 15th an unusually brilliant display of aurora was seen over the whole country, while on the 18th thunder and lightning occurred in isolated portions of the

western and southern districts. In the closing week of November strong winds from the westward (south-west to north-west) set in, with milder and very unsettled weather, the passage of a deep cyclonic system on the 26th and 27th being accompanied by a severe gale over the entire southern half of the kingdom.

In December the British Islands lay midway between a large Continental anticyclone and a series of cyclonic disturbances travelling north-eastwards or eastwards at a long distance from our northern coasts. The prevailing winds were therefore westerly or south-westerly, and the weather was extremely mild, a complete absence of anything like severe frost being reported in nearly all parts of the country. Owing to the remoteness of the rain-bearing cyclones the month was very dry, especially about the middle portion, when many places experienced the unusual occurrence of a December drought, lasting in some cases for more than a fortnight. A good deal of fog prevailed over England between the 1st and 4th of the month, and again between the 10th and 14th. Quite at the end of the year, when a deep barometrical depression began to spread over the country from the westward, a strong gale from south-east sprang up on many parts of our western coasts.

The *mean temperature* of the quarter was below the average, the deficit varying from little more than half a degree in England North-east to more than a degree and a half in England East and England South-west. The highest temperatures occurred mainly on October 9th, when the thermometer rose above 60° in all districts, and touched 65° in England South-west (at Bath). The lowest temperatures of the quarter (and in some places of the entire year) occurred in November,—mainly between the 17th and 22nd, when sharp frost was experienced in all but the Channel district. In the East of England the thermometer did not fall much below 24°, but in most other districts it went down to 20° or less, the lowest readings reported being 15°·0 at Carlisle on November 19th and 20th, and 15°·7 at Llangammarch Wells on November 17th. At some stations in the midland and southern counties the frost which occurred in the third week of October was almost, if not quite, as sharp as that of November.

The *rainfall* measured in London amounted to a trifle over 5·0 inches, and was not more than 71 per cent. of the average. A similarly large deficiency was reported in England East, and a still larger one in England Central and England South-west, where the total rainfall amounted to little more than two-thirds of the average. The closest approximation to the normal (81 per cent.) was recorded in England North-east and the Channel. The number of days with a measurable quantity of precipitation ranged from 60 in the Channel and 50 in England East (where, however, considerable local variations in frequency were observed) to 44 in England South, and to only 42 in London. Falls of an inch or more in 24 hours were rare, the largest reported being 1·58 ins. at Falmouth on October 31st, and 1·32 ins. at Stonyhurst on October 14th.

The duration of *bright sunshine* in London amounted to 157 hours, being 11 hours in excess of the average, but only 19 per cent. of the possible duration. In the western and northern portions of the country the excess was greater than in London, the amount in England South-west being equal to 32 per cent. of the possible. In England Central the duration was very closely in agreement with the normal, while in England East there was a slight deficiency. Over the country, as a whole, the third week in October was the brightest experienced at so late a period in the year since the general establishment of sunshine recorders in 1881.

Deaths.

The deaths registered in England and Wales last quarter numbered 127,746, and were in the proportion of 14·8 annually per 1000 persons living, the mean rate in the ten preceding fourth quarters having been 16·9. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 12·0 in Sussex, 12·3 in Middlesex and in Northamptonshire, 12·4 in Kent, 12·5 in Buckinghamshire, and 12·6 in Surrey, to 16·4 in Durham, 16·6 in Lancashire and in Monmouthshire, 16·7 in Herefordshire, and 16·8 in London.

The 127,746 registered deaths included 65,269 of males and 62,477 of females, the death-rate among males being 15·7, and that among females 14·0, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding fourth quarters the death-rate of males showed a decrease of 2·2, and that of females a decrease of 2·0, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 112 is to 100, agreeing with the mean proportion in the fourth quarters of the ten preceding years.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1905 is estimated at more than fifteen and a half millions, the death-rate was 15·8 per 1000 living, or 1·0 above that of the whole country. The rates in the several towns ranged from 7·6 in Hornsey, 8·9 in Kings Norton, 10·7 in Hastings, 10·9 in Grimsby, and 11·0 in Leyton and in Handsworth (Staffs.), to 18·5 in Huddersfield, 18·6 in Middlesbrough, 18·8 in Tynemouth, 19·3 in Preston, 20·3 in Bootle, and 20·4 in Liverpool

In 141 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and containing an aggregate population estimated at about four and three quarter millions in the middle of 1905, the death-rate was 13·7 per 1000 living, or 2·1 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than thirteen and three-quarter millions in the middle of 1905, of whom nearly six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 14·2.

Mortality at Different Ages.

Of the 127,746 deaths registered last quarter, 26,345 were those of infants under one year of age, 57,260 those of persons aged between one year and sixty years, and 44,141 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was 120 per 1000; this is the lowest rate recorded in any previous fourth quarter, the mean rate in the ten preceding corresponding quarters having been 148. Among registration counties with populations exceeding 100,000 persons, the lowest proportions per 1000 births were 70 in Herefordshire, 71 in Wiltshire, 80 in Somersetshire, 81 in Oxfordshire, 83 in Buckinghamshire, and 84 in Berkshire. The highest proportions were 134 in Northumberland, 135 in Glamorganshire, 139 in Staffordshire, 143 in Lancashire, 144 in Carnarvonshire, and 148 in Durham.

In the 76 great towns infantile mortality averaged 134 per 1000 births, being 14 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 70 in Hornsey, 74 in Bournemouth, 76 in Burton on Trent, 80 in Hastings, 90 in Reading, and 92 in Handsworth (Staffs.); the highest were 172 in Rochdale, 174 in Blackburn, 175 in Middlesbrough, 177 in Burnley, 181 in Smethwick, and 216 in Hanley. Among the 141 smaller towns infantile mortality averaged 119 per 1000 births, ranging from 52 in Watford, 55 in Salisbury, 57 in Folkestone, 59 in Chiswick, 60 in Richmond (Surrey), and 64 in Erith, to 193 in Workington, 197 in Middleton, 202 in Bilston, 204 in Farnworth, 222 in Glossop, and 231 in Accrington. Excluding these 217 towns, infantile mortality in the remainder of England and Wales was in the proportion of 104 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·4 per 1000 of the estimated population at this group of ages, being 1·3 below the mean rate in the ten preceding fourth quarters. In the 76 great towns the mean mortality was 8·3 per 1000, ranging from 3·3 in Hornsey, 4·0 in Kings Norton, 5·1 in Ipswich, and 5·4 in Hastings and in Northampton, to 10·1 in Oldham and in Middlesbrough, 10·6 in Bury, 11·3 in Liverpool, and 11·7 in Bootle and in Preston. In the 141 smaller towns the mortality averaged 6·7 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 69·3 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding fourth quarters having been 67·3. In the 76 great towns the mean mortality was 75·0 per 1000: the lowest rates being 43·8 in Grimsby, 44·9 in Kings Norton, 46·3 in Hastings, 48·1 in Leyton, 50·8 in Ipswich, and 54·3 in Hornsey; and the highest 87·0 in Newport (Mon.), 88·3 in Manchester, 88·9 in Burnley, 91·5 in West Hartlepool, 93·0 in Huddersfield, and 101·1 in Tynemouth. In the 141 smaller towns the rate averaged 68·9 per 1000.

Compared with the mean rates in the ten preceding fourth quarters, the mortality of infants under one year of age showed a decrease of 18·9 per cent., that of persons between one year and sixty years of age a decrease of 14·9 per cent., and that of persons aged sixty years and upwards an increase of 3·0 per cent.

Mortality from certain Epidemic Diseases.

The 127,746 deaths from all causes include—

2,109	that were attributed to		diarrhœa,
1,876	„	„	measles,
1,520	„	„	diphtheria,
1,490	„	„	whooping-cough,
1,112	„	„	scarlet fever,
874	„	„	"fever,"
4	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 8,985 deaths were referred during the quarter, being in the proportion of 1·04 annually in each 1000 living at all ages and of both sexes, or 0·69 per 1000 below the mean proportion in the fourth quarters of the preceding ten years.

The rates of mortality last quarter from all the above-mentioned diseases were below the respective averages.

Diarrhœa was the cause of 2,109 deaths during the quarter—a number corresponding to a rate of 0·24 per 1000 living, which is 0·19 below the

average rate in the fourth quarters of the previous ten years. In counties with populations exceeding 100,000 persons the rates of mortality from diarrhœa ranged from 0·02 in Buckinghamshire and in Cornwall, to 0·36 in Durham, and 0·38 in Staffordshire. In the 76 great towns diarrhœa was fatal in the average proportion of 0·30 per 1000; among these towns the highest rates were 0·52 in Walsall, 0·56 in Hanley, 0·60 in Oldham, 0·65 in Warrington, 0·73 in Wolverhampton, and 0·98 in Middlesbrough. In the 141 smaller towns diarrhœa caused an average mortality of 0·24 per 1000, and among them was most fatal in Wednesbury, Glossop, Radcliffe, Ilkeston, Oldbury, and Longton. In the remainder of England and Wales diarrhœa was fatal at the rate of 0·19 in each 1000 of the population.

Measles was the registered cause of 1,876 deaths last quarter, corresponding to an annual rate of 0·22 per 1000 living at all ages, which is lower by 0·17 than the decennial average rate for the fourth quarter of the year. Of the 55 Registration counties five were free from measles fatality throughout the quarter; among the counties with populations exceeding 100,000 persons, the disease was most fatal in Surrey, in Warwickshire, and in Carnarvonshire, where the rate was 0·31 per 1000, in Middlesex 0·33, in London and in Cumberland 0·47, in Glamorganshire 0·65, and in Denbighshire 0·66. In the 76 great towns measles caused an average mortality of 0·30 per 1000. In 32 of these towns no deaths from measles were returned. Among the remaining great towns, the highest rates were 0·71 in Rhondda, 0·73 in Barrow in Furness, 0·78 in Willesden, 0·89 in Wolverhampton, 1·27 in Blackburn, 1·33 in Swansea, and 2·98 in Preston. In the 141 smaller towns the death-rate from measles averaged 0·14 per 1000, the disease showing exceptional fatality in Hendon, Erith, Edmonton, Hartlepool, Loughborough, and Workington. In the remainder of England and Wales measles caused an average death-rate of 0·15 per 1000. Among registration districts and sub-districts outside the 217 chief towns, this disease was especially fatal in Woking, Somersham, Williton, Much Woolton, Maesteg, and Glyncorrwg.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was the assigned cause of 1,520 deaths last quarter, which were equal to an annual death-rate of 0·18 per 1000 of the population, or 0·11 less than the average rate in the ten previous fourth quarters. No deaths from diphtheria were returned from two out of the 55 counties, and the mortality from that disease in counties with populations exceeding 100,000 persons ranged from 0·02 per 1000 in Cornwall, and 0·04 in Cambridgeshire, to 0·29 in Durham, 0·30 in Hampshire, 0·36 in the East Riding of Yorkshire, and 0·42 in Herefordshire. In the 76 great towns diphtheria caused an average mortality equal to 0·19 per 1000 annually. Among these towns there were two in which no deaths from this disease were registered; in the other great towns the rates ranged from 0·03 per 1000 in Brighton, and 0·04 in Walsall and in Stockport, to 0·46 in Reading, 0·48 in Portsmouth, 0·54 in Merthyr Tydfil, 0·58 in Hull, and 0·66 in Walthamstow. In the 141 smaller towns diphtheria was fatal on the average to 0·17 per 1000 of the population, and showed the greatest proportional fatality in Canterbury, Todmorden, Lincoln, Bromley, EbbwVale, and Hereford. In the remainder of England and Wales, diphtheria caused an average mortality of 0·17 per 1000. Among registration districts and sub-districts outside the 217 chief towns, the mortality from this disease was excessive in Thame, Silverton, Martock, Guiting, Wingate, and Gelligaer.

Whooping-cough was returned as the cause of 1,490 deaths last quarter, giving an annual rate of mortality equal to 0·17 per 1000 living, which is 0·06 below the decennial average rate for the fourth quarter of the year. In five of the 55 counties no deaths from whooping-cough were registered

last quarter. Among counties with populations exceeding 100,000 persons, the rate was as low as 0·02 in Cambridgeshire, and 0·03 in Carmarthenshire. The mortality rose to 0·28 per 1000 in Carnarvonshire, 0·32 in Monmouthshire, 0·33 in the North Riding of Yorkshire, and 0·37 in Durham. Among the 76 great towns, the average mortality attributed to this disease was 0·22 per 1000. In 10 of these towns no deaths were attributed to whooping-cough during the quarter, but the mortality was equal to 0·70 per 1000 in Bootle, 0·71 in Burnley, 0·83 in Gateshead, and 0·88 in Warrington. In the 141 smaller towns whooping-cough was fatal on the average to 0·11 per 1000 of the population, and among these towns, showed exceptional fatality in Wallsend, Lowestoft, Stafford, Oldbury, Abertillery, and Rowley Regis. In the remainder of England and Wales, the death-rate from this disease averaged 0·15 per 1000. Among registration districts and sub-districts outside the 217 chief towns, whooping-cough was exceptionally fatal in Braughing, Orcheston, Wendron, Stanhope, Blaenavon, Llanbister, and Amlwch.

Scarlet fever was the stated cause of 1112 deaths last quarter, giving an annual death-rate equal to 0·13 per 1000 living, which is lower by 0·03 than the decennial average rate for the fourth quarter of the year. Of the 55 registration counties in England and Wales five were free from scarlet fever mortality throughout the quarter. The counties with populations exceeding 100,000 persons that showed the highest scarlet fever death rates were Northamptonshire and Cheshire, where the rate was equal to 0·19 per 1000, Leicestershire and the West Riding of Yorkshire 0·22, and Lancashire 0·28. The average rate of mortality from this disease in the 76 great towns was 0·17 per 1000. From 17 of these towns no scarlet fever deaths were returned. Among the other towns the rates ranged from 0·02 in Newcastle on Tyne, to 0·67 in Liverpool, 0·69 in Blackburn, and 0·70 in Bootle. In the 141 smaller towns scarlet fever was fatal in the average proportion of 0·11 per 1000 living; it caused the greatest mortality in Heywood, Tunstall, Leigh (Lancs.), Darwen, Widnes, and Dewsbury. In the remainder of England and Wales the death-rate from this disease was 0·09 per 1000 living. Among registration districts and sub-districts outside the 217 chief towns, scarlet fever showed excessive fatality in Higham Ferrers, Axbridge, Warsop, Normanton, and Selby.

"*Fever*" (including the principal forms—*typhus*, *enteric fever*, and "*pyrexia*" of uncertain origin) was the registered cause of 874 deaths last quarter. These deaths were equal to an annual death-rate of 0·10 per 1000, which is below the decennial average rate for the fourth quarter by 0·12 per 1000. There were 9 counties in which no deaths from "fever" were registered last quarter. Among counties with populations exceeding 100,000 persons, the "fever" death-rates ranged from 0·01 in Suffolk, and 0·02 in Hertfordshire, to 0·14 in the West Riding of Yorkshire, 0·15 in Hampshire, 0·17 in Lancashire, and 0·26 in Durham. In the 76 great towns the average mortality from "fever" was equal to 0·09 per 1000 of the aggregate population. Sixteen of these towns were free from "fever" mortality. In the remaining towns the highest rates from "fever" were 0·29 in Salford, 0·31 in Preston, 0·39 in Wallasey, 0·41 in Bury, and 0·65 in Wigan. In the 141 smaller towns the average rate of mortality from "fever" was 0·14 per 1000; among these towns the disease showed the highest proportional fatality in Coseley, Hyde, Farnworth, Ebbw Vale, Gorton, and Widnes. In the remainder of England and Wales, "fever" caused an average death-rate of 0·10 per 1000 living. Among registration districts and sub-districts outside the 217 chief towns, 'fever" was especially fatal in Basingstoke, Maldon, Dartmouth, Newton '(Ashton under Lyne), and Haverfordwest.

Small-pox was fatal in 4 instances last quarter, as compared with 134, 155, 73, 32, and 4 respectively in the five quarters immediately preceding.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,782 last quarter, and corresponded to an annual rate of 0·56 per 1000 of the population, against an average of 0·61 in the ten preceding fourth quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·13 in Hertfordshire, 0·21 in Denbighshire, 0·28 in Herefordshire, 0·31 in Bedfordshire and in Middlesex, and 0·32 in Oxfordshire; the highest rates were 0·67 in Staffordshire, 0·68 in Warwickshire, 0·75 in Northumberland, 0·79 in Monmouthshire, and 0·81 in Glamorganshire. In the 76 great towns the mean rate was 0·59 per 1000 living; among the several towns the rate was only 0·05 in Hornsey, 0·06 in Handsworth (Staffs.), 0·18 in Bournemouth, 0·23 in Kings Norton and in Rochdale, and 0·24 in Southampton; but it rose to 0·83 in Bootle, in Newport (Mon.), and in Rhondda, 0·89 in Bury, 0·94 in Grimsby, and 1·03 in Wallasey.

Certification of Causes of Death.

Of the 127,746 deaths registered in England and Wales last quarter, the causes of 116,472, or 91·2 per cent., were certified by registered medical practitioners, and the causes of 9,122, or 7·1 per cent., by coroners after inquest; whilst the causes of the remaining 2,152, or 1·7 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding fourth quarters having been 2·0 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Wiltshire, Gloucestershire, the East Riding of Yorkshire, and Glamorganshire, but it reached 3·4 in Kent, Herefordshire, and Denbighshire, 3·5 in Durham, and 4·7 in Carnarvonshire. In the 76 great towns the mean proportion of uncertified deaths was 1·1 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, East Ham, Hastings, Southampton, Great Yarmouth, Plymouth, Devonport, Derby, Oldham, York, West Hartlepool, Merthyr Tydfil, and Swansea, the proportion per cent. rose to 4·3 in St. Helens, 4·7 in Handsworth (Staffs.), 4·8 in West Bromwich, 5·0 in Bootle, 5·8 in Barrow in Furness, and 9·1 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 9,122, or 7·1 per cent. of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·6 per cent. In the 76 great towns the proportion of inquest cases averaged 8·2 per cent., ranging from 2·8 in Gateshead, 3·5 in Rochdale, 4·0 in St. Helens, 4·1 in Preston, 4·3 in Barrow in Furness, and 4·5 in Blackburn, to 10·8 in Derby, 10·9 in Wallasey, 11·2 in Devonport, 11·3 in Croydon, 12·5 in Tottenham, and 16·1 in Grimsby.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 23,476, or 18·4 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 14·7 per cent. In the 76 great towns the deaths in public institutions averaged 24·1 per cent. of the total deaths, the lowest percentages in the several towns being 2·5 in Rhondda, 4·4 in Hornsey, 5·3 in Handsworth (Staffs.), and 5·8 in Kings Norton and in Gateshead; and the highest 23·1 in Brighton, 23·3 in Bootle, 23·4 in Salford, 24·3 in Manchester, 30·4 in Liverpool, and 37·6 in London.

LONDON.

The numbers in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London that occurred in the London Fever Hospital, in the Metropolitan Asylums Board Hospitals, and in the Middlesex County Lunatic Asylum, within the County of London. The death-rate, thus computed, was equal to 16·8 annually per 1000 living (Table VI.). If, however, all the deaths of non-Londoners that occurred in hospitals or other public institutions in London be excluded, the death-rate will not exceed 16·2 per 1000. Table X. shows the death-rate in London after this further correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the Metropolitan Boroughs are also shown, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged.

Edinburgh, Glasgow, Dublin, and Belfast.

The annual death-rate per 1000 living last quarter was 16·2 in Edinburgh, 18·5 in Glasgow, 20·4 in Dublin, and 19·7 in Belfast, against 16·8 in London.

Colonial and Foreign Cities.

The Registrar-General has been favoured with weekly returns of vital statistics by the authorities of thirty of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XI.). Excluding the Indian Cities, the highest and lowest annual birth and death-rates during the fourth quarter of 1905 were as follows :—

Birth-Rates.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Breslau	31·6	Brussels	17·8
Trieste	31·5	Paris	17·9
Toronto	29·0	Prague	20·0
Munich	28·5	Venice	21·8
Buda Pesth	27·9	Berlin	22·4
Amsterdam	27·1	Rome	22·7
		London ... 26·1	

Death-Rates.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Trieste	26·4	Antwerp	12·7
Moscow	25·1	Chicago	13·0
Bucharest	21·8	Amsterdam	13·0
Venice	21·5	Christiania	13·7
St. Petersburg	21·4	Brussels	14·0
New Orleans	20·9	Stockholm	14·2
		London ... 16·8	

Small-pox caused 40 deaths in Rio de Janeiro, 19 in Moscow, 17 in Paris, and 10 in St. Petersburg.

Measles was most fatal in proportion to population in Trieste, St. Petersburg, Amsterdam, Buda-Pesth, and Rio de Janeiro; *scarlet fever* in St. Petersburg, Moscow, Stockholm, Berlin, and Buda-Pesth; *diphtheria* in Christiania, St. Petersburg, Moscow, Philadelphia, Toronto, and New York; *whooping-cough* in Hamburg, Breslau, St. Petersburg, Berlin, Amsterdam, and Copenhagen; "*fever*" in St. Petersburg, Rome, Bucharest, Rio de Janeiro, Moscow, and Philadelphia; and *diarrhœal diseases* in Moscow Munich, St. Petersburgh, Breslau, Trieste, and Bucharest.

Infantile Mortality.—Among those cities for which the figures are available, the proportion of deaths among children under one year of age to 1000 registered births ranged from 83 in Paris, 85 in Christiania, 86 in Amsterdam, and 89 in Stockholm, to 159 in Breslau, 164 in Berlin, 169 in Trieste, 175 in Venice, 182 in Bucharest, and 200 in Munich.

Indian Cities.—The death-rate was equal to 60·3 per 1000 in Madras, 37·8 in Bombay, and 31·4 in Calcutta. *Small-pox* caused 89 deaths in Madras, 44 in Calcutta, and 13 in Bombay; *measles* caused 91 deaths in Madras, 23 in Bombay, and 13 in Calcutta. Under the heading "*fever*" 1899 deaths were classed in Madras, 1832 in Calcutta, and 992 in Bombay, including respectively, 4, 166, and 185 deaths from *plague*. The mortality from *diarrhœal diseases* was excessive in Madras; *Asiatic cholera* caused 415 deaths in Madras, 643 in Calcutta, and 5 in Bombay.

Returns of Notified Cases of Infectious Disease.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the fourth quarter of the year 1905 (*see* pages xxvii—xxxii).

The Year 1905.

According to the quarterly returns furnished by local registrars, 929,457 births and 519,939 deaths were registered in England and Wales in the year 1905. The natural increase of population, by excess of births over deaths, was therefore 409,518, the average annual increase in the preceding five years having been 390,276.

The returns issued by the Board of Trade show that 459,917 emigrants embarked during the year from the various ports in the United Kingdom at which emigration officers are stationed, for places beyond Europe. Distributing proportionally 9,186 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 268,860, of whom 176,215 were English, 42,128 Scottish, and 50,517 Irish, whilst 191,057 others were of foreign origin. In proportion to population the numbers of emigrants accredited to England and Wales, Scotland, and Ireland were 5,160, 9,008, and 11,507 per million respectively; the proportion for England and Wales shows a decrease of 3·7 per cent., the proportion for Scotland an increase of 9·7 per cent., and the proportion for Ireland a decrease of 14·1 per cent., as compared with the several figures for the previous year.

The birth-rate in England and Wales in 1905 was 27·2 per 1000 of the population, which is 0·7 per 1000 below the rate in 1904, and lower than the rate in any other year on record; compared with the average in the ten years 1895–1904, the birth-rate in 1905 shows a decrease of 1·8 per 1000.

The death-rate in 1905 was 15·2 per 1000, which is 1·0 per 1000 below the rate in 1904, and lower than the rate in any other year on record; compared with the average rate in the ten years 1895–1904, the death-rate in 1905 shows a decrease of 2·0 per 1000.

The 519,939 deaths registered in 1905 included 119,293 of infants under one year of age, 231,816 of persons aged between one year and 60 years, and 168,830 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 128, which is 18 per 1000 below the rate in 1904, and lower than the rate in any other year on record. Compared with the average in the ten years 1895–1904, the rate of infantile mortality shows a decrease of 22 per 1000. The death-rate among persons aged between one year and 60 years was 7·5, and that among persons aged 60 years and upwards was 66·8, per 1000 of the estimated populations at the respective groups of ages.

The total deaths registered included 20,024 from diarrhœa, 10,841 from measles, 8,417 from whooping-cough, 5,359 from diphtheria, 3,778 from scarlet fever, 3,048 from "fever" (including the three principal forms, *typhus*, *enteric fever*, and *pyrexia* of uncertain origin), and 113 from small-pox. Thus 51,580 deaths were attributed to these epidemic diseases, corresponding to a rate of 1·52 per 1000 living, against 1·64, 1·46, and 1·94 respectively in the three preceding years.

Birth-rate, Death-rate, and **Analysis** of **Mortality** in the year 1905.

—	ANNUAL RATE PER 1000 LIVING.										Deaths under one year to 1000 Births.
	Births.	Deaths.	Principal Epidemic Diseases Cols. 4–10.	Small-pox.	Measles.	Scarlet Fever.	Diph-theria.	Whoop-ing Cough.	Fever.	Diar-rhœa.

England and Wales less the 217 Towns.	26·3	14·9	1·09	0·00	0·24	0·09	0·15	0·20	0·09	0·32	113

To different forms of violence 19,559 deaths were referred, being in the proportion of 0·57 per 1000 of the population, against 0·59, 0·58, and 0·57 respectively in the preceding three years.

The 519,939 deaths included 35,510 cases, or 6·8 per cent., in which inquests were held; and 8,398 cases, or 1·6 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1905, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Sixty-eighth Annual Report, which is now in course of preparation.

TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1895-1905,** and in each Quarter of those Years.

YEAR	1895	1896	1897	1898	1899	1900	1901	1902	1903	1904	1905
Marriages	228,204	242,764	249,145	255,379	262,334	257,480	259,400	261,750	261,103	257,524	—

TABLE V.—**76 Great Towns.—Population; Births, Deaths,** and **Meteorology** in the 13 Weeks ended **30th December, 1905.**

NOTE.—The 76 Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TOWNS.	ESTIMATED POPULATION in the middle of 1905.	BIRTHS.	DEATHS.	The DEATHS registered include: Deaths of: Infants under 1 Year of Age.	Persons aged 60 Years and upwards. * Excluding deaths of persons admitted into public institutions from

NOTE.—The 76 Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TABLE VII.—**One hundred and forty-one smaller Towns.—Population; Births and Deaths in the QUARTER ended 31st December, 1905.**

NOTE.—The 141 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 persons at the Census of 1901. They are arranged alphabetically under the Registration Counties in which they are situated. The Registrars alone must be considered responsible for the accuracy of the figures upon which these Returns are based.

TOWNS.	ESTIMATED POPULATION IN THE MIDDLE OF 1905.	BIRTHS.	DEATHS.	The DEATHS registered in the Quarter include														TOWNS.

In this Table 0·00 indicates that the deaths were too few to give a rate of 0·005 : where *no death* occurred, – is inserted.
Note.—The rates for the County of London do not in all cases agree with those in Table vi., page xix. ; for explanation, see page x.
* Formerly described as "Simple Continued Fever."

TABLE XI.—**Births** and **Deaths** in the **Fourth Quarter** (13 weeks) of 1905 in certain **Colonial** and **Foreign Cities.**

The *Registration Districts*, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[a] See page 2, note [b].

[b] For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar

II.—SOUTH EASTERN COUNTIES.—Registration Districts.

Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages	Births	Deaths		The Deaths in the Quarter are stated by the Registrars to include												
							Deaths of		Deaths from										
			Registered in Quarter ended 30 Sept. 1905.	Registered in Quarter ended 31 Dec. 1905.	Average in 31 Quarters ended 31 Dec. in the 3 Years 1903-04.	Registered in Quarter ended 31 Dec. 1905.	Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Violence.	Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.

* 6 : 2.—On 1st December, 1905, Rectory (2) and St. Mary (3) sub-districts were united and called St. Mary (2). The births and deaths are shown as if the change had taken place at the beginning of the quarter.

[a] The *Registration Sub-districts* (2039 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

[b] See page 2, note [b].

[c] See page 6, note [b].

[a] 609 : 2.—The 5 deaths from diphtheria and the 2 from fever occurred in Ebbw Vale Urban District.
[b] 617*a* : 4.—The 7 deaths from measles, which were registered during December, belonged to Mold Urban District; between the 1st and 15th January, 1906, 4 more deaths from this disease were registered in the sub-district.
[c] 617*b* : 1.—Of the 4 deaths from diphtheria, 3 belonged to the parish of Tryddyn.

XI.—MONMOUTHSHIRE AND WALES.—REGISTRATION SUB-DISTRICTS—*continued.*

Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1901.	Births: Registered in the Quarter ended 31 Dec. 1905.	Deaths: Average in Quarters ended 31 Dec. in the 3 Years 1902-04.	Deaths: Registered in the Quarter ended 31 Dec. 1905.	The DEATHS in the Quarter are stated by the Registrars to include: Deaths of: Infants under 1 Year of Age.	Deaths of: Persons aged 60 Years & upwds.	Deaths from: Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Violence.	Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.

METEOROLOGY.

Remarks on the Weather over the United Kingdom during the Quarter ended December 31st, 1905.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 152 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

OCTOBER, 1905.

General Summary.—Taken as a whole the month of October proved an abnormally quiet period, for the gales which were experienced on our coasts were neither so frequent nor so violent as usual at this time of the year. This was due to the persistency of a high pressure type of conditions, which occupied the greater part of the country during a considerable portion of the month, while the central spaces of the disturbances which influenced our weather were, in nearly every instance, at some distance from our shores. The only depression which left the sea for the land was that of the closing days. It was one of the deepest thus far this season, but it turned out to be possessed of very little wind energy, and in the night of the 31st it was completely dispersed, after occasioning a fair amount of rain over the country generally. Low temperatures prevailed most of the time, and especially after the middle of the month when severe night frosts were felt in many localities. During the third week the mean temperature over the whole Kingdom was 7° below average; hail, sleet or snow showers occurred in the north and east from the 14th to the 16th. Dull weather, with very little sunshine, was in the ascendent through the first half of the month, but afterwards, although there was a good deal of morning mist or fog, the days were very bright, the duration of sunshine during the third week being generally the best October record since the introduction of automatic recorders in 1881. Only a few unimportant thunderstorms were reported. For the entire month pressure was decidedly in excess of the normal; the winds were mainly from between West and North, with a fair proportion in the South-West and North-East quarters also; there was a considerable deficiency of temperature in all districts; the rainfall was less than usual in nearly all places; and with few exceptions the duration of bright sunshine was in excess.

Pressure.—*Mean at 8 a.m.* ranged from 30·13 ins. at Valencia, and above 30 ins. over the western and southern districts to 29·87 ins. at Sumburgh Head. The distribution of mean pressure, instead of being of the normal southerly to westerly, was of a distinctly north-westerly type, the actual values being in all cases above the average, the excess being greatest, 0·24 in., over the south-west quarter of Ireland, and least, 0·06 in., at Yarmouth. The gradient was moderate. *Highest* readings were registered on the 11th, 30·56 ins. at Donaghadee and Roche's Point, the mercury being above 30·5 ins. at many stations between the 9th and the 12th. On numerous other days values above 30·2 ins. were reported in various parts of the country. *Lowest* values occurred on the 4th, 28·78 ins. at Sumburgh Head, and below 29 ins. over Scotland and the north of England; and on the 29th and 30th, 28·84 ins. at Blacksod Point, and below 29 ins. over northern Ireland and Wales. With these exceptions the readings were mostly above 29·5 ins. *Range* was considerable in all districts, from 1·1 in in the Channel Islands to 1·7 in. in the Shetlands and the north-west of Ireland.

Depressions.—On the 3rd and 4th the centre of a deep disturbance occasioning Westerly to Northerly strong wind and gales, passed round the outer northern islands, eventually reaching the Baltic and Russia. A shallow depression which appeared across the mouth of the English Channel on the 18th was accompanied by much rain as it moved down the west of France for the Mediterranean. Another shallow wet weather system formed on the Danish coast on the 20th, and after following the coast to the mouths of the Rhine it recurved for the Baltic and Russia. From the 25th to the 27th our northern districts were to some extent affected by a moderately deep disturbance travelling north-eastward at some distance beyond our coasts. The last four days of the month were marked by a deep cyclonic area which moved slowly across Ireland to the north of England, thence back to Ireland and dispersing.

Anticyclones.—During the greater part of the period high pressure conditions ruled, but with the exception of the 8th to the 12th, the 19th and 20th, and the 25th, the central spaces of the systems were outside our coasts, mainly to west and south, but sometimes to north and north-east.

Winds.—Under the influence of the persistent high pressure areas Westerly to Northerly winds prevailed, but in some localities South-Westerly or North-Easterly breezes were rather frequent. As a rule the strength was not great, gale force being reached on 8 days at Deerness and Holyhead, on 6 days at Blacksod Point and Portland Bill, and on 5 days at a few other stations.

Temperature.—*Mean at sea level* ranged from 50° and upwards at a few of the south-western coast stations, (52·2° at Guernsey), to below 45° in various parts of England, Ireland and Scotland, and to below 43° at Sumburgh Head. The general distribution of temperature resembled the normal, but the actual values were in all cases below the average, the deficiency being from 4° to 6° in many places, 5·2° at Tunbridge Wells, 5·7° at Wisley, and 5·9° at Dungeness. *Highest* readings occurred on the 9th generally, 69·5° at Killarney, 68° at Waterford, 67° at Ballinacurra and Clathick, and 66° at Leith, but many localities failed to touch 60°. *Lowest* values were recorded on varied dates, but mainly between the 17th and 23rd, 16° at Llangammarch Wells, 19° at Marlborough and Markree Castle, 20° at Swarraton and Wokingham, and 22° at Maidenhead, Birr Castle, Edenfel and Kilkenny Castle. *Range* was 40° and upwards at numerous stations, 45° at Llangammarch Wells, 43° at Killarney, and 42° at Maidenhead and Waterford, while at Guernsey it was 20°, and at Scilly and Malin Head only 17°. *Vapour Pressure* ranged from 0·30 in. at Blacksod Point and Jersey to 0·23 in. at Sumburgh Head, Wick, Nairn, Shields and Oxford. *Relative Humidity* was as high as 94 per cent. at Birr Castle, and 90 per cent. at Roche's Point, Stornoway and Spurn Head, against 79 per cent. at Scilly and 77 per cent. at Valencia.

Rainfall.—At a dozen stations, nearly all on the east coast of Britain, there was an excess of precipitation, otherwise the amounts were all under the average, the deficiency being more than 2 ins. in several localities, 3·4 ins. at Roche's Point and Waterford, and 3·6 ins. at Valencia. The aggregate totals ranged from 8·8 ins. at Glencarron, 7·2 ins. at Laudale and 5·2 ins. at Deerness to less than an inch over the south-east coast of Ireland and at some of the English stations, 0·7 in. at Shoeburyness, Kingstown, Ballinacurra and Kilkenny Castle, and 0·5 in. at Waterford. There were very few stations at which as much as an inch fell on any one day, but on the 29th, 30th or 31st an inch was measured at Foynes, St. Leonards and Braemar, 1·1 in. at Arlington and Cullompton, 1·2 in. at Worthing, 1·4 in. at Dungeness, and 1·6 in. at Falmouth. The days with rain numbered 30 at Glencarron, 29 at Deerness and Wick, and 28 at Sumburgh Head, Stornoway and Lairg, but 10 or less at some stations in the south of England and of Ireland, 8 at Kilkenny Castle and Waterford.

Bright Sunshine.—There was a deficiency of sunshine in several parts of Scotland, a loss of 40 hours at Strathpeffer, but elsewhere the duration was above the average, by 33 hours at Pembroke, 38 hours at Blackpool, and 40 hours at Tenby. The percentage of possible duration ranged from 46 at Tenby and 43 at Pembroke and Salcombe to 21 at Stornoway, 20 at Deerness and 17 at Strathpeffer.

NOVEMBER, 1905.

General Summary.—During the greater part of the period under review the atmospheric conditions were of an exceedingly unsettled type, due to the number of disturbances which advanced from the Atlantic, some skirting the western coasts going northward, others crossing the country in various directions. But while many of the depressions were deep, and in three instances very deep, the general freedom from wind storms, which had been a characteristic feature since the early spring months, was maintained until nearly the close of November, a

fresh, strong or whole gale being experienced in the course of the 26th or 27th on practically every section of our coasts, the wind direction being Southerly to Westerly and North-Westerly. Most of the time the weather was cold and unpleasant, sharp frosts occurring in many localities after the middle of the month. The atmosphere was humid, and in most districts rain was frequent, and at times heavy. From time to time there were falls of hail, sleet or snow pretty generally. Fog was reported on several days, more especially over the inland and eastern and south-eastern counties of England, being very dense occasionally. Thunderstorms, or thunder or lightning alone, occurred on various dates at a number of places. On the evening of the 15th there was a brilliant display of aurora borealis practically all over the kingdom, extending southwards into France. At the same time a magnetic storm was registered at Kew Observatory. Relatively sharp earthquake shocks were felt in Manchester and the surrounding districts at about 3.45 a.m. on the 25th. For the month as a whole pressure was everywhere well under the normal; the winds were very variable in direction and gales were felt in some localities on several days; temperature was in defect at nearly every station; rainfall was in excess over the greater part of England, variable in Ireland and Scotland; and bright sunshine was generally in excess.

Pressure.—*Mean at* 8 *a.m.* ranged from 29·71 ins. at Jersey and about 29·70 ins. along the Thames Valley to below 29·60 ins. in the north-west and north, 29·58 ins. at Stornoway. The values were all below the average, the deficiency amounting to 0·12 in. at Sumburgh Head and to as much as 0·25 in. at Pembroke and Scilly. The distribution of mean pressure was more irregular than the normal and the gradient was slight. *Highest* readings occurred on the 17th and 18th, 30·28 ins. to 30·25 ins. at several places. On the 22nd Jersey touched 30·25 ins. *Lowest* values were recorded on the 1st and 2nd, 28·88 ins. at Portland Bill; 12th and 13th, 28·68 ins. at Valencia; and 26th and 27th, 28·61 ins. at Malin Head. At all stations the mercury passed below 29 ins. on one or more occasions. *Range* was consequently large, and unusually uniform, from 1·3 in. at Bath and Yarmouth to 1·6 in. at Aberdeen and Malin Head.

Depressions.—The low pressure systems were numerous, and their paths very varied. A deep disturbance which appeared at the mouth of the English Channel on the morning of the 1st followed a tortuous path, occupying a week in reaching the Shetlands, finally passing beyond the Arctic Circle, and crossing Lapland to the White Sea region. A deeper depression reached the south-west of Ireland on the 12th, and travelling quickly on an east-south-easterly course traversed the north of France to South Germany, Austria and Russia. A slightly deeper one arrived over the north-west of Ireland on the 26th, followed a north-easterly course to the Norwegian coast, and eventually crossed the White Sea. The other disturbances were of more moderate depth, the majority of them keeping to the north-eastward outside our north-western and northern coasts, but the paths of two were eastward across France.

Anticyclones.—The high pressure areas of the month were in nearly all cases far distant, either in the extreme south-west, south-east or north-east of Europe. A small one, in which the readings were slightly above 30·1 ins., appeared over Britain on the 9th, immediately passing away to the north-eastward. The highest barometer readings were recorded at a time when the centre of the anticyclone lay over Bavaria and Austria.

Winds.—With the irregular distribution of pressure and the very varied paths of disturbances, winds from all quarters were experienced, there being no decided preponderance from any one direction. Gale force was attained on 5 or more days in several localities, on 8 days at Jersey, Portland Bill, Pembroke and Yarmouth, and on 10 days at Deerness.

Temperature.—*Mean at sea level* ranged from 48° at Guernsey and above 45° along the south-west coast of England, from the Isle of Wight to Pembroke, to slightly below 41° at various inland stations in the southern counties of England and Wales, and below 40° at some places in Ireland and Scotland, mostly inland. The general distribution was similar to the normal, but the actual values were, almost without an exception, below the average, the deficiency exceeding 4° at Birr Castle, Kilkenny Castle, and Bettws-y-Coed, and amounting to 5·2° at Cardiff. *Highest* readings occurred on very varied dates, but mainly about the 2nd, 22nd and 26th. A maximum of 59·5° was reached at Eastbourne (2nd), 58° at Killarney (4th), and 57° at Jersey and Maidenhead (2nd), Clongowes Wood College (3rd), and Wokingham (11th). *Lowest* values were recorded between the 16th and 22nd, in the majority of cases on the 18th or 19th. Braemar touched 5°, and a number of stations reported minima between 13° and 20°. *Range* was, as a rule, only moderate, less than 35°, but Braemar had 45°, Clongowes Wood College 41°, and Crathes and Wokingham 40°, while Scilly and Sumburgh Head had only 19°, and Malin Head and Deerness 18°. *Vapour Pressure* ranged from 0·27 in. at Scilly and Jersey to 0·20 in. at Birr Castle and Nairn. *Relative Humidity* was generally high, from 95 per cent. at Birr Castle to 84 per cent. at Scilly and Jersey.

Rainfall.—In Scotland, Ireland and the south-west of England the rainfall was rather variable in amount; over the rest of England and Wales it was above the average. At a dozen stations there was an excess of more than 2 ins., as much as 3·1 ins. at Braemar and

Clathick, 3·3 ins. at Guernsey, and 3·4 ins. at Alnwick Castle. Nowhere was there a large deficiency. Aggregate totals exceeding 5 ins. were numerous, Crathes returning as much as 9·4 ins. Several places in the eastern counties of England received less than 2 ins., Yarmouth 1·5 ins. The number of days on which precipitation was measured ranged from 29 at Blacksod Point and Guernsey to 11 at Dunmow. Falls of more than an inch in a day were uncommon, the largest being 1·7 in. at St. Leonards, and 2·3 ins. at Crathes, both on the 11th.

Bright Sunshine.—The duration of bright sunshine was above the average at nearly all stations. The excess was mostly small, but Torquay had 43 hours more than usual, and the excess at Blackpool, Tenby, Plymouth and Scilly amounted to 30 hours or more. The percentage of possible duration ranged from 41 at Scilly, and 40 at Salcombe and Torquay to 11 at Westminster and Glasgow, 10 at Prestwich and 9 at Manchester, Whitworth Park.

DECEMBER, 1905.

General Summary.—The meteorological features presented during the closing month of 1905 were of an interesting character. There was an unusual persistency of anti-cyclonic conditions. The regions of greatest pressure being, as a rule, on the Continent, extending from the Bay of Biscay and Portugal to Southern Russia and Turkey, but the northern limits of the systems nearly always embraced a large portion of the British Isles, and the highest barometer readings of the month, above 30·9 ins., occurred at several of our home stations. Disturbances were, consequently, almost exclusively confined to the ocean, well outside our western and northern coasts, one of minor importance passing from the Bay of Biscay along the north of France and on to Germany. The only general gale was experienced on the last day when, coincident with a fall of the barometer in the south-west, there was a very decided increase of pressure elsewhere, resulting in a strong wind to a whole gale from South-East in many localities. Taking the period as a whole, however, a South-Westerly type of conditions prevailed, but with the centres of the depressions so far distant that occasional gales were felt only at the more exposed situations in the far west and north. One consequence of the steady flow of breezes from the Atlantic was the abnormal mildness, which was most marked in Ireland and Scotland. A curious anomaly was that these ocean winds brought with them very little rain, many days passing in some districts without any precipitation, so that there was the rare occurrence of a December drought. In the first half of the month there were several days of thick mist or fog in many parts of England, but the Christmas season was remarkably clear. Thunderstorms were reported in several parts of Scotland on the 8th. For the entire month pressure and temperature were in excess of the normal; the winds were mainly Southerly to Westerly in direction, frequently blowing strongly on the western coasts; there was a general deficiency of rain; and the duration of bright sunshine was rather variable.

Pressure.—*Mean at 8 a.m.* ranged from 30·26 ins. at Jersey and above 30·2 ins. over the southern counties of England to below 29·9 ins. in the north of Scotland, 29·83 ins. at Sumburgh Head. The values were in all cases well above the average, by as much as 0·16 in. at Valencia and 0·3 in. at Oxford. The general distribution showed a fair agreement with the normal, but the gradient was rather more steep. *Highest* readings were attained all over the country on the 12th, when the mercury rose to 30·9 ins. and upwards over an area extending from the Midland Counties of England to the west coast of Ireland, 30·94 ins. at Donaghadee. There were only six days during the month on which the barometer was not above 30·2 ins. in some part of the Kingdom. *Lowest* values occurred at the close of the first and fourth weeks, 28·92 ins. at Stornoway on the evening of the 6th and 28·99 ins. at Sumburgh Head next morning; and 29·12 ins. at Dungeness on the morning of the 29th. *Range* was remarkably uniform, 1·6 in. at three-fourths of the stations, 1·5 in. at Leith and Shields, and 1·9 in. at Stornoway.

Depressions.—Most of the depressions followed a north-easterly path at some distance out on the ocean, but for about a week towards the close large systems of low pressure were indicated beyond our south-western coasts, and from one of these a small disturbance moved along the north of France to Germany on the 28th and 29th. No centre of minimum pressure visited any part of the British Isles.

Anticyclones.—An area of very high pressure, 30·9 ins. and above, lay immediately over the British Isles on the 12th, but although the barometer was usually high during the remainder of the month the anticyclonic centres were most of the time situated over the central or southern portions of the Continent.

Winds.—Southerly to Westerly winds predominated largely nearly all through the month, but after Christmas a South-Easterly current prevailed over the south-western districts. The days on which gales were recorded numbered 14 at Stornoway, 12 at Deerness, 7 at Laudale, and 5 at Cockle Park and at Pembroke.

Temperature.—*Mean at sea level* ranged from nearly 49° at Scilly, and above 45° in most parts of Ireland and on the south-west coasts of England. to below 40° in some of the eastern counties, 38° at Rauceby. With the exception of Cardiff and Jersey, all stations returned temperatures above the average, the excess over the western and northern districts generally being large, exceeding 5° in many parts of Scotland and Ireland, and amounting to 5°·4 at Armagh and Dublin. *Highest* readings were recorded on very varied days, but mainly on or about the 7th, when Rhyl touched 59°, Westminster, Maidenhead and Reading 58°, and several other southern stations 57°. *Lowest* values also occurred on varied dates, mostly on the 10th or 11th, or quite at the close of the month, but frosts of any great intensity were almost entirely absent, the only minima below 25° being 17° at Nairn (31st), 20° at Braemar and Strathpeffer (30th) and Lairg (26th), 21° at Wokingham (11th), 22° at Rauceby (11th) and Llangammarch Wells (26th), and 23° at Epsom (11th) and Tunbridge Wells (12th). *Range* was, in consequence, unusually small, 13° at Scilly, 15° at Falmouth, and less than 20° at many stations, generally less than 30°, but was 36° at Wokingham and 38° at Nairn. *Vapour Pressure* ranged from 0·22 in. over the inland and eastern counties of England to 0·30 in. at Roche's Point. *Relative Humidity* was as high as 95 per cent. at Roche's Point, 94 per cent. at Spurn Head, and 90 per cent. or above in several other localities, only Leith being as low as 83 per cent.

Rainfall.—Only at Killarney and Stornoway was there a small excess of rain for the month. As a rule the aggregates were decidedly below the average, the deficiency being more than 2 ins. in many places, and exceeding 3 ins. at a few stations. The largest totals were 9·3 ins. at Glencarron and 8·1 at Killarney; the smallest 0·19 in. at Saltburn-by-the-Sea and 0·15 at Shields, several localities returning 0·5 in. or less. Over the greater part of England the amounts were less than an inch. The days with rain numbered 25 at Killarney and Sumburgh Head, and 24 at Blacksod, but many places had less than 10, only 5 at Durham, Garforth and Shoeburyness, and 4 at Saltburn-by-the-Sea. The stations at which an inch or more fell in a day were Fort Augustus, Glencarron, Laudale, and Killarney.

Bright Sunshine.—There was a very irregular distribution of bright sunshine, some stations being above, others below the average, Llandudno having an excess of 34 hours and Margate a deficiency of 20 hours. The aggregates ranged from 8·5 hours at Glasgow, 12 hours in London, and 14 hours at Westminster to 69 hours at Scilly, Llandudno, and Hoylake, and 75 hours at Rhyl. The percentage of possible duration was only 4 at Glasgow against 25 or more at several of the west coast stations, and 33 at Rhyl.

Minimum Temperature on the Grass.

In October, 1905, the temperature on the grass fell below 30° in all districts except No. 8 (Channel Islands), and to 20° or below in all the other districts except No. 5 (England, N.E.).

The number of days on which the grass minima fell below 30° varied from 18 days in districts Nos. 1, 2, and 7 (London, England Central, and England, S.W.) to 15 in districts Nos. 3 and 6 (England, S., and England, N.W.), and to none in district No. 8 (The English Channel).

The lowest of the minima reported in the several districts were:—15°·0 at Kew; 15°·0 at Stokesay; 19°·0 at Portsmouth; 16°·0 at Dunmow; 21°·0 at Hull; 18°·8 at Carlisle; 14°·0 at Bath; and 31°·2 at Guernsey, St. Martin's Road (formerly Fort Road).

During November the minimum on the grass fell below 30° in all districts, and below 20° in all districts, except No. 8 (The English Channel).

The number of days on which the temperature on the grass fell below 30° ranged from 22 in district No. 2 (England Central) to 1 in district No. 8 (The English Channel). On only 6 days, however, was the grass minimum above 30° in all districts, namely, on November 2nd, 5th, 11th, 12th, 14th, and 26th.

The lowest readings reported in the several districts were:—12°·0 at Kew and Barnet; 13·8 at Birmingham; 15°·0 at Portsmouth; 15°·0 at Dunmow; 19·0 at Hull; 12°·5 at Carlisle; 19°·0 at Plymouth; and 29°·4 at Guernsey.

During December the temperature on the grass fell below 30° in all districts except No. 8 (The English Channel), where the lowest observed was 31°·2 on the 10th.

The extreme minimum was, however, higher in December in each district than it was in either November or October, except in the case of district No. 8 (The English Channel), where the minimum, 31°·2, though higher than that of November, was the same as was observed in October.

The number of days with temperature below 30° was as a rule less than in the previous months of the quarter, but in district No. 2 (England Central) it was greater, namely, 27. The number varied from 27 (in England Central) to none in district 8 (The English Channel), but there were only 3 days during the month when the grass minimum did not at some station fall as low as 30°. These days were December 8th, 21st and 22nd.

The lowest of the grass minima reported in the several districts during December were :— 16°·2 at the Royal Observatory, Greenwich : 18°·0 at Coventry ; 21°·0 at Portsmouth ; 21°·0 at Dunmow ; 22°·0 at Hull ; 21°·2 at Carlisle ; 24°·4 at Plymouth ; and 31°·2 at Guernsey.

Maximum Temperature in the Sun.

The maximum in the sun is observed in most cases by means of a thermometer with a blackened bulb *in vacuo*, freely exposed to the sun's rays at a height of 4 feet above the ground.

The highest readings of such instruments reported in October, 1905, in the several districts ranged from 130°·1 at Guernsey (district No. 8) on the 5th to 106°·7 at Kew (district No. 1) on the 3rd.

At seven stations the maximum in sun did not exceed 100°, viz., at Camden Square and Barnet in district No. 1 ; at Birmingham in district No. 2 ; at Salisbury and Canterbury in district No. 3 ; at Hull in district No. 5 ; and at Carlisle in district No. 6.

In November the maximum in sun ranged low, and at only 4 stations were readings of 100° or upwards observed. These stations were : Portsmouth 102°·0 (district No. 3) ; Dunmow 100°·5 (district No. 4) ; Plymouth 102°·5 (district No. 7) ; and at Guernsey 123°·8 (district No 8). This reading at Guernsey, 123°·8, was the highest reported in any district for the month. At Camden Square (district No. 1) the highest temperature in the sun's rays reported for the month was only 75°·8 on the 3rd, while at New Barnet it was still lower, namely 59°·0 on the 4th.

During December the maximum in sun did not reach 100° in any district, the highest reported being 99°·9 at Guernsey (district No. 8) on the 12th.

At three other stations maxima above 90° were observed, namely, at Shrewsbury, 91°·0 on the 7th (district No. 2) ; at Cockle Park Farm, near Morpeth, 95°·0 on the 3rd (district No. 5) ; and at Llandudno, 96°·2 on the 3rd (district No. 6). At all the other stations the maxima were below 90°. At Camden Square the highest observed was only 64°·3, and at Barnet it was only 59°·0.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of W. N. Shaw, Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

List of Stations and Observers.

Station.	Observer.	Station.	Observer.
1. LONDON:—		3. ENGLAND, S.:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Camden Square	H. Robert Mill, D.Sc., LL.D.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Westminster ..	The Meteorological Office.	Portland Bill ..	The Meteorological Office.
Brixton ..	The Meteorological Office.	Eastbourne ..	S. R. Henderson, for the Corporation.
Norwood ..	W. Marriott.	Salisbury ..	Thos. Challis, for the Earl of Pembroke.
2. ENGLAND, CENTRAL:—		Canterbury ..	A. Lander.
Sheffield ..	E. Howarth. The Weston Park Museum.	4. ENGLAND, E.:—	
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	Lowestoft ..	C. W. Edwards, for the Corporation.
Wakefield ..	A. Clyde.	Clacton-on-Sea	A. W. Shadick, for the Urban District Council.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Dunmow ..	Thos. Hacking. The Countess of Warwick's Agricultural School.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Cambridge ..	R. Irwin Lynch. The Botanic Gardens.
Buxton.. ..	W. Pilkington	Norwich .. (Eaton.)	A. W. Preston.
Cheltenham ..	A. C. Saxby, for the Corporation.	Bennington ..	Rev. J. D. Parker, LL.D.
Oxford	The Radcliffe Observatory.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Stokesay ..	Rev. W. La Touche, B.A.		
Berkhamsted	E. Mawley.		
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.		

Station.	Observer.	Station.	Observer.
5. ENGLAND, N.E.:—		7. ENGLAND, S.W., WITH SOUTH WALES :—	
North Shields	The Meteorological Office.		
Spurn Head ..	The Meteorological Office.	Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.
Durham ..	Prof. R. A. Sampson, M.A., F.R.S.	Woolacombe ..	B. Fanshawe.
York	Oxley Grabham, M.A., for Yorkshire Phil. Soc.	St. Ann's Head, Pembroke.	The Meteorological Office.
Hull	H. B. Witty, for the Corporation.	Bristol .. .. (Clifton.)	D. Rintoul, M.A. Clifton College.
Cockle Park .. (*near Morpeth*).	A. G. Birt, for the Northumberland County Council.	Falmouth ..	The Meteorological Office.
		Barnstaple ..	Thos. Wainwright. The North Devon Athenæum.
Tealby	Rev. S. Lewin, B.A.	Bath	W. H. Symons, M.D., M.O.H., for the Corporation.
		Llangammarch Wells.	W. Black Jones, M.D.
6. ENGLAND, N.W., WITH NORTH WALES :—			
Llandudno ..	W. Little, for the Town Council.		
Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bidston Observatory.		
Aspatria ..	J. Smith Hill, B.Sc. The Agricultural College.	8. THE CHANNEL :—	
Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.	Scilly	The Meteorological Office.
Carlisle.. ..	Studholme Cartmell, for the Corporation.	Jersey	The Meteorological Office.
Stonyhurst ..	Rev. W. Sidgreaves, S J. The Observatory.	Guernsey ..	Adolphus Collenette.

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than ·2, and as an "overcast" day if the average is greater than ·8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are :—Clear sky, 0, 0, 0 ; and Overcast, 1, 1, 8.

Oxford :—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows : Rain, 86 years, 1815–1900 ; Temperature, 73 years, 1828–1900 ; Sunshine, 20 years, 1881–1900.

Name of Station, County and Height. [The figures give the height of the Cistern of the Barometer above Mean Sea Level.]	1905.	Barometer. Mean Pressure, at 32° F. at Station Level.*	Air Temperature. * The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :—

For all the stations marked *a*. *b*. and *c*. the results under Barometer, Hygrometer and Cloud are based on the morning for districts. For the station marked *c*, and for Camden Square, where the wind is not observed at 9 p.m., the results for them more readily comparable with the results for other stations. They, as well as the number of days of "Clear Sky"

† The averages used are obtained from observations extending over 35 years, namely :—For Rainfall, 35 years, 1866-1900 ; Sunshine, 15 years.)

‡ At the Royal Observatory the earth temperature is taken at 3 feet 2 inches below the surface ; at this station the numbers for the 4th Quarter as thus calculated, are respectively Clear Sky 0, 0, 0, and Overcast 1, 1, 8. *See* Note on page 79.

Wind Force.—Beaufort Scale (0-12) is used. The number of observations of moderate and strong wind (force 4-7).

a. (St. Ann's Head, Bath, Scilly and Jersey) the observing hours are 8 a.m. and 6 p.m. Greenwich time.
b. (Barnstaple) the observing hours are 9 a.m. and 3 p.m. local time.
c. (Llangammarch Wells) the observing hour is 9 a.m. local time.
Observations only, and these results are in consequence printed in French type. They have not been included in the means
and have been multiplied by 2 in order to make them more readily comparable with the results for other stations.
are included in the means for districts.
Temperature, 30 years, 1871-1900; Sunshine, 20 years, 1881-1900.
The number of observations of calm and the number of days of gale are given in the table.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number** of each REGISTRATION DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberayron, 604.
Abergavenny, 582.
Aberystwith, 605.
Abingdon, 115.
Alcester, 397.

INDEX OF URBAN DISTRICTS

As constituted on 31st December 1905 together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,164 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 149 were each co-extensive, at the end of December 1905, with one or more Registration Areas.
